BERRY'S

1949 SEED GUIDE

*Low Prices and
Guaranteed Quality*
SEEDS
AND NURSERY STOCK

Service, Satisfaction and Saving

We are here to serve you on your seed and nursery requirements. Your every letter and order will have prompt, courteous, personal attention. Berry's prices are always lowest, quality considered. We guarantee our World Brand Quality to be unexcelled, regardless of price.

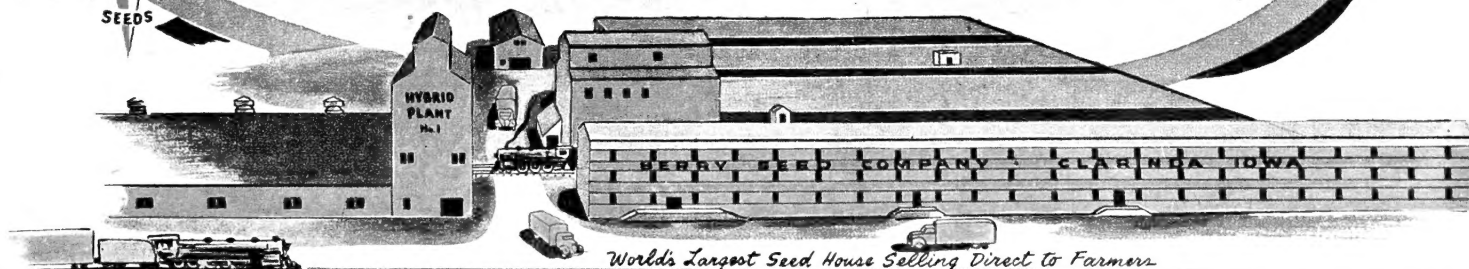

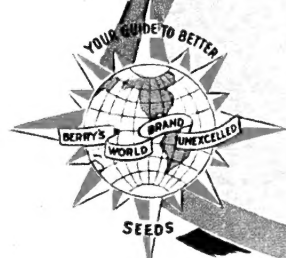

Our catalog contains accurate descriptions of all crops and qualities. Any Grade or Mixture offered has been field tested for satisfactory results. We carry the most complete stocks of field and grass seeds in the country. Our crop experts are always looking for newer and better varieties for you. Your success in crops and farming is our business. Write us for our recommendations. We guarantee to save you money and serve you fairly and squarely at all times. We assure you of prompt shipment and safe arrival on all orders. We desire to give perfect satisfaction with every transaction.

Markets are strong—order now. You'll be glad to get the finest qualities and have the biggest selections at lowest prices.

World's Largest Seed House Selling Direct to Farmers

BERRY SEED CO. Clarinda, Iowa

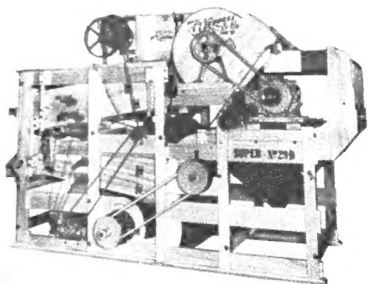

The Berry Organization That Serves Your Interests

MODERN CLEANING MACHINERY

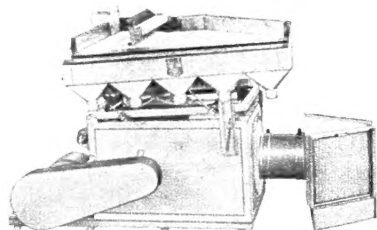

We are showing here a few of the machines that we use in cleaning and grading our seeds. Some of these are installed in batteries of 3 or 4. Then there are scores of screens for some of these machines. Others work on a different basis and use no screens at all. All of them require expert adjustment according to the kind of seed being cleaned and the impurities to be removed. Sometimes we buy seed already cleaned but for the most part we do all our own cleaning and grading. We have the equipment and the know how.

MODERN CLEANING

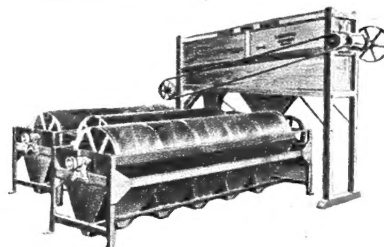

After going through our plant all lots are tested in our laboratory. Test tags are prepared to show the purity, germination and any other information that the Federal Law requires for shipments going into your state. You know what you get when you buy from Berry's.

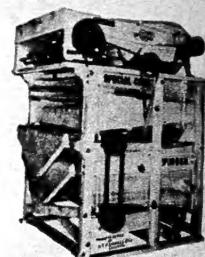

This cleaner uses screens and regulates air blast in processing seed. We have several of these types.

A "Gravity" grader which separates seed by weight instead of size. It will do many cleaning jobs a screen grader cannot do.

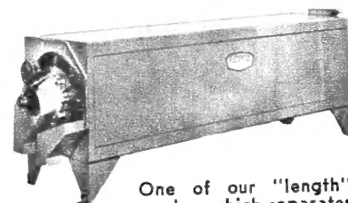

A combination grader that first separates corn according to thickness of kernels and then according to width.

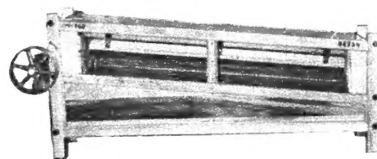

This machine is used in our first step of grading corn. It separates Flat and Round kernels. Both Flats and Rounds are then graded for accurate planting.

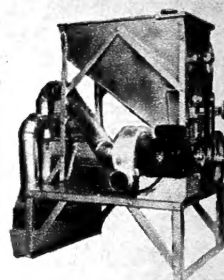

This peculiar cleaning machine has rolls covered with velvet that pick up certain rough weed seeds while the smoother clover seeds go through.

One of our "length" graders which separates corn kernels for length, after they have been graded for thickness and width.

This shows exposed, the rings through which corn must pass in thickness grading. The space between is graduated to 1/64 of an inch.

Our seed corn is all chemically treated. See page 33 for details. Treated seed will stand more unfavorable weather conditions after planting. Our seed is triple treated to give every known protection to assure the best stand and plants.

A view of main office where orders are checked and started to you within a few hours after they arrive.

Stenographic Dept. where your questions are answered and all correspondence is handled promptly.

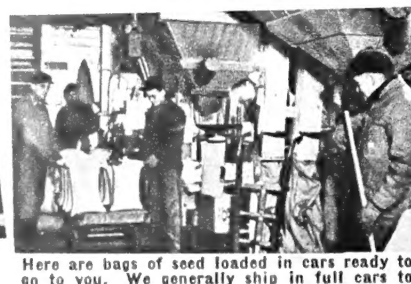

Billing office. Here tags are written and bills of lading made to cover your order and send it on its way for safe delivery.

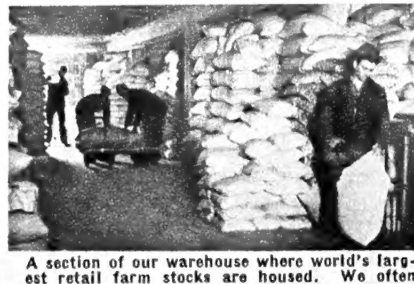

A section of our Seed Laboratory where seed is expertly examined and tested for purity and germination. All farm seed shipments are tagged accordingly.

A section of our mailing room where parcel post shipments are handled and catalogs mailed out.

Here are bags of seed loaded in cars ready to go to you. We generally ship in full cars to junction points so as to speed delivery.

A section of our warehouse where world's largest retail farm stocks are housed. We often have over a million dollars worth in Clarinda alone.

Part of our Garden Seed Department. Here your orders for Vegetable or Flower seeds can be filled in almost any amount.

Certified Clinton Oats

THE MOST SENSATIONAL YIELDING

BLIGHT RESISTING

Has Wonderful Records

The Clinton rates tops in medium early oats. It has the heavy yields that make big profits. You get in these oats, high resistance against most diseases. A very strong strawed oat that stands up even after grain is dead ripe. They are quite a large grained variety with thin hulls. There is more feeding value in them.

These Clinton Oats will outyield all the old varieties even in good oat years. Under unfavorable conditions the Clintons will yield twice as much. When Helminthosporium blight is present they are so far ahead that the susceptible varieties cannot even be considered. In Iowa in the 1948 official tests Clinton made a top yield of 123.8 bu. per acre. There was no other variety to equal that. In the average of two year tests they lead all varieties in test in northern central and southern Iowa.

That also shows you it is widely adapted. When it leads the rest in all of Iowa it can do it throughout most of the spring oat section. It was also the strongest strawed oat in the 1948 Iowa tests. They were above the average in test weight per bushel. We have other varieties of oats listed on page 8 of this catalog. Under certain conditions one of these others may prove better. Under most circumstances you will make no mistake in selecting Clinton.

Grow Them for Extra Profits

You can make a good profit from your oat acres. Better seed of this wonderful variety will bring extra results. More bushels of higher quality grain. Better for a nurse crop as they have strong straw and are not so apt to lodge. Grain that you can let stand until it is thoroughly ripe so it can be safely combined. Clintons should be allowed to get fully ripe before combining. Such oats are of finer quality, higher feeding value and keep much better in storage.

Clintons mature a little earlier and have shorter straw than Benton or Bonda and a little later and longer straw than Minto and Cherokee. In sowing Clinton or any oat you cannot get maximum results by using field run grain for seed. The extra cost of good seed is well worth the price.

Blue Tag State Certified

This seed is planted from Certified seed stock. The fields are inspected for noxious weeds and also mixtures of other varieties. If it passes this inspection the grain is again inspected and tested for purity and germination. If it meets all state requirements it is certified. We have this beautiful Blue Tag quality seed for you. See item 176 on price list for quotations.

Our non-certified Clintons are from stocks we have carefully inspected and cleaned, equal to Blue Tag quality grade. See Item 177 on price list.

Also see page 9 of this catalog for our super quality or Golden Beauty Brand of Clintons and the New Clinton 59 variety.

Hawkeye

SENSATIONAL NEW... EARLY SOY BEAN

Finest and Best for Northern Farms

A few years ago the Lincoln Soy Bean was introduced to central and southern Iowa. It "Showed its heels" to all other varieties in that maturity class. It still is the best. However, it was a little too late for northern Iowa and similar areas. The early beans were Richlands which had very short stems and Earlyana which lodged severely under some conditions.

Now we have the Hawkeye Soy Bean which is just as fine for the northern section as Lincolns are farther south. In northern Iowa, Illinois, Indiana and Ohio, and southern Michigan, Wisconsin, Minnesota and northeastern Nebraska and southeastern South Dakota it is a bean superior to all others. It is better than anything that has been grown thus far in a commercial way. It is a cross of Mukden with Richlands.

Characteristics

The Hawkeye Soy Bean has strong stalks. It produces many 3 seeded pods instead of all two, like Richlands. Grows about 4 inches taller. Is a little shorter than Mukden. The oil content is high. That is an important factor in Soy Beans. It will outyield other varieties of similar maturity by four to five bushels per acre under most conditions. Beans

are light in color, a little larger than Richland and considerably larger than Mukden.

While the Hawkeye Bean is especially developed for the northern sections it is competing very well with Lincolns farther south. In central Iowa Hawkeye produced 40.6 bu. per acre compared with 41 for Lincoln. That means it can be used for late planting or early harvest much farther south. It will mature a week earlier than Lincolns under climate like northern and central Iowa.

Supplies Very Limited

It takes some time to get adequate supplies of seed. The demand for these beans is tremendous. All farmers in the northern area who have heard about these beans want them. There won't be enough to supply the demand. We have been successful in getting a fair supply where surplus stocks were released to seedsmen at reasonable prices. We will book orders at prices shown on price list enclosed so long as we are able to do so. We reserve the right to limit amounts to any one customer but will try to supply all with the seed they require. See Item 185 on price list for quotations. This is State Certified Seed and all of guaranteed high quality. First come first served. Mail your orders in at once. See page 14 of this book for other Soy Bean varieties.

See Item No. 185 on Enclosed Price List for Quotations

Topeka, Kansas.

Dear Sirs: I am glad to let you know that I am pleased with your seed. I have been a customer of Berry's for 10 years and have always received good seed. My Clinton Oats are very good and I recommend them to anyone as better than any other oats.

Yours truly, ALOYS SCHWERMANN.

Meservey, Iowa.

Dear Sirs: I have been buying seeds from Berry's every year I have farmed. I received them promptly. They have been very satisfactory and have saved money. My favorite pasture is Just-Rite Red Clover Mixture.

Yours truly, BERT SUNTKEN

We Can Help You Grow MORE and BETTER CORN

How We Can Do It

The secret of Better Hybrid Seed Corn lies mainly in 5 factors. 1. Using Inbred lines of superior quality and highest purity. 2. Making the proper combination of Inbreds to give the desired characteristics. By that we mean such things as depth of grain, strength of stalk, time of maturity feeding value, heavy yields, adaptability to different soils etc. 3. Careful crossing of Inbreds and single crosses to prevent impurities from coming into the seed that you as a farmer will plant. 4. Handling the seed carefully and thoroughly during harvest and grading. 5. Shipping corn of high germination that is graded to plant accurately.

We watch all of these 5 vital factors very carefully. The 813 listed below and the others on pages 6 and 7 are our selections of the best of all varieties. We challenge the world to give you anything better, yet our prices are lower.

Item 150 on Price List

The Kind of Seed You Will Get

When you order any Berry's Hybrid Seed Corn you are guaranteed a shipment of seed that will please you. It will be well graded for accurate planting and it will germinate 90% or better. Generally it is 95%.

Specify the grade you want when ordering

All varieties excepting the Hybrid, page 7, are available in six grades. Medium Flat, Medium Large Flat and Large Flat. There is also the Large Round, Medium Round and Small Round. Any of these grades will produce exactly the same kind and quality of corn on your farm. For example you can buy 813 in any of these grades and get the same kind of a crop. You can make extra savings by using our Round Grades.

In addition to the quality factors you can see when you look at our seed corn you will get fine blood lines. Corn with big yield records, fine feeding quality. Excellent husking and vigorous, disease and insect resistant plants.

A FAMOUS RECORD BREAKER... BERRY'S 813 • 159.1 Bu. Per Acre

Pictures of a Great Event

These pictures show a portion of a field of our 813 Seed Fields that made history in Page County, Iowa. It also shows the men who worked in harvesting this field. The man on the right in the corn field is Harry Stout of Clarinda who owns and works the farm producing this crop. Harry is mighty proud of the job he did with the 813.

You occasionally hear of 150 bushel average corn crops. Harry didn't use a pound of fertilizer. He planted it a little thicker than normal but he got extra big ears. The man on the picker said it was almost like picking cordwood. Harry had 77 acres in the field, it was all good. He had a section of the field measured accurately, and weighed the corn carefully. He got 450 bu. and 50 lbs. of Berry's 813 from exactly 2.95 acres.

If you think we're bragging you should listen to Harry tell about it. After all it's the man who grows it who should be satisfied. That man is you. If you live where you can grow U.S. 13 or any 115 to 120 day Hybrid by all means grow some Berry's 813 and see what it will do. Compare it with any other you can buy at any price. You'll find you have something sensational in this variety.

"My Friends Thanked Me"

Dear Friends: I have been doing you a lot of good in regard to your seed corn and can truthfully say that I enjoyed it very much when farmers came to me and said, "Well, Henry, you told me the truth. Berry's 813 is the best." I could have sold hundreds of bushels in the last two years had I not been so busy. Farmers around here were slow about trying something new. But today the picture has changed. They've seen what Berry's 813 will do.

Henry Wilde, St. Elizabeth, Mo.

"My 813 Largest in the Neighborhood"

Dear Mr. Stum: This is our third year in ordering seeds and corn Hybrids from you. So far have been very well pleased. Had some Berry's 813 Hybrid corn that was the largest in the neighborhood. 405 has been a sure thing and am ordering it for the third year. Am trying your medium Blends this year.

A. C. Michael, Fremont, Ohio.

"813 Is Really a Knockout"

Gentlemen: A few days ago I sent an order for 10 bushels of Berry's No. 813 Hybrid and 10 bushels of your No. 800 Hybrid corn to Berry Seed Company at Clarinda. I had Berry's 813 this year and it was the best ever, making 90 bu. (no irrigation). Have used in the last 3 years quite a number of noted numbers, and 813 was really a knockout. Planted and tended in the same manner as other numbers were tended.

W. L. Otto, Ulysses, Nebr.

Dear Sir:

We have been using Berry's Seed on our farm exclusively and find no other seed like it. Your 813 is doing exceptionally well in spite of bad weather.

Sincerely, Mitchell A. Dupoux.

Westville, Ill.

WITH EXTRA
INBREDS

BIG
SINGLE EAR

DEEP
SOFT GRAINED

MAIN
CROP VARIETY

120 DAY
TYPE

It's Sensational

If you could only hear the enthusiastic reports from farmers who have grown this great Hybrid we wouldn't have to say a word about it. The big long ears, the deep golden kernels, the large strong stalks, the fine feeding qualities and the tremendous yields are the things they talk about. Many of these farmers grew more than one Hybrid and to date we have found none who reported he had anything that yielded as much as our 813.

Read About the "Stout Test"

We wish you could have been here and seen the great seed field in the Harry Stout Farm. Would like to have had you help harvest those 295 acres checked, and watch the great big ears of Berry's 813 being weighed in at 80 pounds to the bushel, for the amazing total of over 151.9 bushels to the acre.

190.36 Bu. Per Acre on One Test

In test plantings we have the following reports on "witnessed" yields. 190.36 bu. per acre at 15% moisture, Andrew K. Hoyden, Decorah, Iowa; 146.57 bu. U. S. Newcomer, Auburn, Indiana; 146.57 bu. from Green City, Iowa; 137.28 bu., Calmar, Iowa; 131.64 bu., Lakewood, Illinois. These records of yields indicate the wide adaptability of Berry's 813 and show the enormous capacity of this variety to yield. It is far the best for main crop.

A Wonderful Pedigree

Berry's 813 has everything that U. S. 13 ever had plus a lot more. Extra later pollinating Inbreds have been incorporated. Our purpose is to provide additional pollen to assure fertilization of the ears in event the main pollen crop shall be burned by excessively high temperatures.

Thus there is provided an extra assurance of better filled ears. This also has a tendency to lengthen the ears and it appears to reduce ear droppage.

Character of Berry's 813

One large ear per stalk. Easy to husk by hand or machine. Deep grains of high feeding value. Enough soft starch so livestock will eat it readily but not a real starchy kernel. Dark green foliage. Husks dry before stalk matures. Strong stalks. A vigorous grower. An exceptional drought resistor. Resistant to chinch bugs and disease. High shelling percentage. A fine feeding corn. A longer pollinating period assuring better filled ears under adverse conditions. Adapted to a wide range of soils and suitable wherever U. S. 13 can be grown. Be sure to grow some this year.

Large or Medium Large Flat Grain \$10.00 bu.

Medium Flat Grain \$9.50 bu.

Medium or Medium Large Round \$7.75 bu.

Large Round Grains \$6.75 bu.

Page 4

Gentlemen:

I find your seed exactly as represented and at a savings which mean a lot at seed buying time. Your No. 813 Hybrid Corn was the best I ever raised.

Yours very truly, Winston E. Fellers.

Tulsa, Okla.

Berry's SEED GRADES, GUARANTEE, and MARKET INFORMATION

GUARANTEE

We guarantee that our prices are lowest, considering quality. If upon receipt of your order you are not entirely satisfied you can return it and your money, plus transportation charges, will be promptly refunded. Or you can keep it 60 days and have the seed tested in order to satisfy yourself that the quality is good and that you have saved money and secured a big bargain. Then if you are not pleased you can return it, and have all money, including freight paid, refunded. You must be satisfied and we guarantee to save you money.

For garden seed guarantee see page 37—nursery stock page 55.

BERRY SEED CO., Clarinda, Iowa.

BIG SAVINGS

Through Buying DIRECT

A farmer knows from his own experience it costs a lot of money to do business today. Regardless of how close a margin any jobber, retail dealer or other handler of seeds can profitably work on, Berry's by eliminating these middle-men can save you money.

When it comes to seed Berry's are the agent for you in buying from the seller and rendering all of our know how and services on the closest possible margin. If we had to buy our seeds on the same basis as some dealers and add a fair profit, our prices, in some cases for the same quality, might be as much as 50% higher than offered in this catalog. So why pay more. Buy direct at Berry's to get the best for less.

BANK REFERENCES

You are assured of a square deal with us. If you wish to check our financial responsibility other than through your local bank write,—Page County State Bank or Citizens State Bank, Clarinda, Iowa; First National Bank, Lincoln, Nebraska; Omaha National Bank, Omaha, Nebraska; Iowa-Des Moines National Bank, Des Moines, Iowa; First National Bank, Drovers National Bank or Continental Illinois National Bank and Trust Co., Chicago, Illinois; Bank of The Manhattan Co., New York City, N. Y.

SAVE MOST BY BUYING EARLY

A good farmer knows the importance of good seeds to his particular operation. He nearly always buys his seeds for spring early, sometimes in the fall as soon as we have them ready. This practice has other important advantages besides saving money. First, he has his seed available when he wants it. Second, he has had the best selection early when none of our regular grades are sold out. Third, he has had the pick of quality and fourth he isn't left out.

Our most important legume seed supplies and grasses are in very short supply. **There isn't enough seed available of hardy Alfalfas, Sweet Clovers and Hubam, Brome Grass and Timothy to supply our normal demand or consumption in the United States.** We are well supplied to take care of early orders. To take care of the shortage of northern Alfalfa we are handling Arizona, Texas and New Mexico origins at very attractive prices and such seed has proven satisfactory in the southeastern states and the southern part of the Corn-Belt. It should be harder than Argentine seed which has been used even further north with satisfactory results. On Timothy we are well supplied with Clover mixtures which is better than seeding straight anyhow. On Brome we have good supplies including Mountain, which we suggest using in mixtures or straight seedings in shorter 2-3 year rotations.

BERRY'S SEED GRADES

WORLD BRAND. This is our Extra Fancy grade. It is our purest and highest testing stock. We recommend it to those who demand the best.

FANCY BRAND. A high quality. May contain a trace of crop or more inert matter than World Brand but just as free of weeds.

PLANET BRAND. This extra choice grade satisfies many customers. Not quite so bright and uniform but a good seeding at low cost.

SQUARE BRAND. Our lowest priced grade. Smaller berried. A little lower germination but more seed per pound so it can perform well.

SPECIAL LOTS. Seed that does not exactly fit into a regular grade or is secured for specials, such as Lot Leader Red Clover. Page 24.

Berry's New Catalog Pricing Policy

In order to save our customers the most money possible we are not pricing most seeds on the pages where described. This copy has to be to the printers weeks in advance of when we mail our catalogs. To give you advantage of any last minute market changes we are printing our prices later on a separate pink sheet. **Be sure to save this Price List.**

The Item Number listed on each page is only to help you in finding this seed on the price list. Some special lots may be on our price list that aren't described in the catalog. Order by name as before, rather than Item Number. If price list is lost we'll mail another one promptly on request, as well as samples and any other information. See also page 33.

SEED COMPLIES WITH FEDERAL LAW

When you order from Berry's you'll find the old slogan,—“What's on the tag is in the bag,” to be true. That may not be the case always of a retail dealer because he isn't operating under the Federal Seed Act as it applies to interstate commerce. Every shipment we make from Iowa or any other state into another one complies with the Federal Seed Act, in that it is labeled in accordance with the Seed Laws of the United States government. This is added protection for you. We have four competent and highly trained seed analysts constantly at work to see you get the most accurate and complete information on our label or tag attached to each bag of seed.

IMPROVED SERVICE TO BERRY CUSTOMERS

Every year we learn something from the previous year's experience. Our employees are trained to watch for new and better ways of handling their part of our job in giving you better service. We try to ship every order promptly. If for some reason there will be a short delay you are so notified. We may ship part now and hold up part later but in any case the delay won't be long. If we can't get it for you in time for your needs, if you order early, no one else can. Our stocks are the largest and most complete available in farm or field seeds including all the new crops of merit.

This year to improve service and save our eastern customers more money we are shipping many orders later in the season from our northeastern Ohio warehouse. We are also offering seeds treated to insure quicker germination and better stands. See page 33 for details. We will also ship by commercial truck lines where it will improve service over freight or save an express charge. **If you know of some local dealer in town who will take delivery on your order and pay the trucking charges give us this on your orders.** Trucks cannot deliver direct in the country and often don't have depot facilities to hold it for you. In most cases truck rates are in line with freight and will give you much quicker service.

Parcel Post Rates

Any order for seeds in one package up to 70 lbs., can be sent Parcel Post. Use the map above to find your zone and figure the rates below in remitting for any seeds ordered shipped by Parcel Post not quoted postpaid.

	1st lb., costs.	All Additional pounds
Zone 1	12c	2c
Zone 2	12c	2c
Zone 3	13c	2 4/5c
Zone 4	14c	4 4/5c
Zone 5	15c	5 4/5c
Zone 6	16c	7 4/5c

Berry's are absorbing some of the increased postage by giving you the above rates as the actual Parcel Post will be slightly higher. If over 70 lbs., we can ship Express charges collect if in a hurry. Order early though, so we can ship freight which is cheapest, particularly on Seed Grains such as Oats that take a special rate.

IT'S EASY TO ORDER DIRECT FROM BERRY'S

We try to describe every offer in this catalog accurately in detail. We tell you all the important features of all main crops. We want to make it easy for you to decide just what crops you want, what qualities we have, so you can order in confidence, you'll get just what you want.

Ordering by mail is the easiest way, because you can study your needs at your convenience with all facts at hand in our catalog. Use our regular order blank form or if lost, any other paper will do. Give full name and complete address. Tell where you want the seed shipped to and how to ship. Freight is most economical. Express or parcel post is quicker but more expensive. **If in doubt tell us when you'll want the seed and leave it to our judgment.** If your freight

station is different from postoffice be sure to say so. In case there is no agent at your freight station we'll prepay the freight and send you notice of the amount due for it.

Some lots or grades of seed may be sold out. Unless you don't want us to use our best judgment in substituting the nearest to it, be sure to mark, “No Substitution,” on your order. If there is a difference in price on the substitution we'll refund any balance due you or notify you of any balance due us.

Send your remittance with your order. This insures better service and saves you a C.O.D. charge. Use any form most convenient in remitting, a postal or express money order, bank draft or your own personal check. Don't send stamps or coins if convenient to remit otherwise.

CORN FOR *Top Yields* ON *Different* SOILS

Every farmer who uses a 120 day corn should plant some of

BERRY'S 800

A Top Quality Hybrid

Our customers are telling us "you can't say too much about your 800." "It has them all beat for yield and fine feeding value quality." Wherever our 800 has been grown it has become very popular. It produces a big ear on a strong stalk. It is disease resistant, holds its ears well. You can pick it by hand or machine. It is widely adapted. It can be grown wherever U. S. 13 can be grown, and it is suitable to similar soils. This means that it is a good corn to select for southeastern Nebraska, and practically all the southern half of Iowa. Draw a line from about central Iowa across through the southern portion of Pennsylvania on to the Atlantic coast, and from there on south, it is a great variety.

There is in our opinion only one other Hybrid that can equal or surpass this wonderful corn. That is our 813 described on page 4. In years of high temperature at pollinating time the 813 has a little longer pollinating period. Aside from that, 800 will perform fully equal to it and under some conditions even beat it. Berry's 800 is slightly earlier than U. S. 13. The depth and the width of the kernel and the softness of the grain are about equal. You may be familiar with U. S. 13 because it is one of the best of the older hybrids. In fact a good many seed houses sell U. S. 13 under various names and sell it as the best corn they have to offer. Berry's 800 has out-yielded this variety by six to ten bushels to the acre.

This 800 Hybrid has fewer dropped ears than varieties like U. S. 13. In a two year test it showed only .2 of 1% of dropped ears. It also has stronger stalks. We have yet to learn of a farmer who has grown our 800 and did not consider it superior in every way. If you live in the area we describe above, we urge you to plant Berry's 800 and some of 813. It will do well on average soils as well as on richer land. It is a truly great Hybrid.

Many Hybrids have great claims made for them. All we ask is that you grow some of this variety even if only $\frac{1}{4}$ bu. It will prove its superiority right on your own farm. It has the blood lines of a great variety.

A very heavy producing, early maturing Hybrid BERRY'S 405

Matures in about 100 to 105 days

This is the earliest Hybrid that we produce. We know of no other Hybrid of similar maturity that will do as much for you as our 405. It has everything that you would expect from the best that you could grow. It is widely adapted from northern Iowa where early maturity is required down to southern Oklahoma where they want corn to get out of the way of hot weather. One of the most prominent farm operators in northern Iowa, at Spencer, wrote us this summer: "You have the show field in this part of the state. You don't have to take a back seat for anybody on this Hybrid." Down at Tipton, Oklahoma, a banker had some of his customers try out 405,

he writes: "I am thoroughly convinced—you have made a believer out of me. People came from miles around to see this corn. From now on we are planting Hybrids."

This 405 makes a good leafy growth. It has kernels of good depth, good sized ears and the yields that bring you extra profit bushels in the fall.

405 starts growing vigorously in the spring. Gets off to a good start and keeps on growing through the season. Some farmers expect an earlier maturing corn to be lower in yield. Our 405 has out-yielded later maturing varieties and some by a big margin. Because it has a fairly tall leafy stalk it can be used to good advantage for ensilage or shredding. We consider it second to none in its maturity class. It does well on a wide range of soil. You can go as far north with this as in southern South Dakota, Minnesota, Wisconsin, Michigan and throughout all areas having similar conditions on down south as explained. For the Central corn-belt, we would select the 800, 613 or 615, unless you want a variety that matures early. In the northern sections it is necessary to use a hybrid like this. You can use it farther south if you want to avoid drouth or want a corn for early feeding or where late planting makes it necessary to get early maturity. Plant this sensational 405 next to any other corn that you consider good. Let this Hybrid prove by actual performance on your own farm that it is a better money maker for you to grow.

U.S. 13 HYBRID

Big Ears, Deep Grain, 120 Day

Practically every farmer throughout the central corn-belt knows about this great Hybrid. It is often used as a standard, by which all other varieties are measured. For example farmers often ask: "Is it as good as U. S. 13?" Its rich soft grain makes wonderful feed. It has strong stalks and is resistant to drought, disease and chinch bugs. Official yield records include production of 123 bushels per acre in Ohio, 103.2 in Indiana, 106 in Nebraska, 121.0 in Missouri, 108.4 in Iowa, etc. Unquestionably it is one of the better Hybrids that has been developed in this country. Our 800 and 813 have features that we consider superior but you will not go wrong by planting our U. S. 13. The corn has a high feeding value and the rich soft grain is readily eaten by all kinds of live stock.

We consider our U. S. 13 corn superior to some of the U. S. 13 that is produced elsewhere. The reason is due to the quality of inbreds used, the care taken in crossing, and handling the seed which may make as much as 10 to 15 bushels per acre difference in yield. It will pay you to buy Berry's U. S. 13. If you read state yield reports, you will see in some state reports that there is often a big difference in the yield of the same variety but grown from different lots of seed. Let us serve you.

Everything Very Satisfactory

Gentlemen: Plainfield, Ind.
The seeds we have bought from you have been satisfactory in every way. I especially like the fine handling which you give to my orders.
Sincerely, Carl E. Meisel.

BERRY'S 939

105-110 Day Maturity

This is a Hybrid that really has a wonderful record. It has won the banner trophy two years in succession. Was the corn with the highest performance score in the Iowa State Yield Contest. It is adapted to a very wide range of soils and climate. It is like our 615 in that respect. It is widely grown from Nebraska on east to the coast and from northern Iowa south to the Ohio river. It will make a nicer corn on soils of the less fertile type than the majority of Hybrids that are produced. It will stand drouth remarkably well. It is a single ear Hybrid with a medium rough type kernel which is a little thicker than the average. The grain is soft and can be readily eaten. The color is deep yellow with a reddish tinge on the sides of the kernel. In Nebraska, this corn in a six year period, was the best yielder in that state. Colorado official yield over a three year period showed 132.1 bushels per acre. Illinois 107.8 bushels. It is tops in central Pennsylvania. It ranks high as an early hybrid in Ohio. Has done well in West Virginia and New York. One of our customers in Michigan writes: "Have been growing your Hybrid corn for three years and your 939 is excellent." Yield of 149 bushels per acre as figured by his County Agent. It is a time tested Hybrid with about 105 to 110 day maturity.

Recommends Quality, Value, Service

Dear Sirs: Harpster, Ohio
I have used your seeds exclusively for the past few years, and have always found them to be as advertised. I would not hesitate to recommend Berry's to any of my farmer friends as far as quality, value and service is concerned.
Yours truly,
Milo L. Gould.

YOU'LL BE BACK FOR MORE WHEN YOU GROW OUR CORN

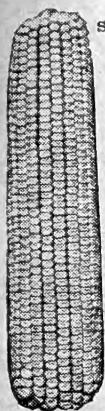

A BEAUTIFUL BIG YIELDER FOR RICHER SOILS BERRY'S 613

112 to 115-Day Type

This Hybrid is one of the finest varieties that has been developed. We do not recommend it for thin land. On land of good fertility it is truly a sensational performer. It is really a beautiful Hybrid. Starts fast in the spring. Grows a strong stalk that has very dark green foliage. You can just see it growing in the fields and know you have something different and better. It is a variety that starts growing rapidly in the spring and know you have something throughout the entire growing season. This field will attract the eye. In the fall the husks dry while the stalks are still green. This permits the ears to make the fullest development. They get all the plant food that the ear can possibly absorb. The ears come single, have deep grains and the corn has the rich yellow color. You can really make show corn out of this 613 variety.

The maturity is a little bit earlier than the 813. That sometimes is quite a decided advantage and permits the variety to be grown somewhat farther north than 813 or U.S. 13. This variety therefore should be adapted as far north as central Iowa and do well as far south as central Missouri. It can even go farther south where an early maturing variety is wanted or farther north may be used for ensilage. On good land we believe this will outyield other corn with the possible exception of the 813. Since it is a little earlier that is an advantage that you may like. It is good to pick either by hand or by machine. It withstands unfavorable conditions well and we would like very much to have you grow some of this corn next to any other that you think is tops in quality. We are sure you would be proud of this variety on your farm.

A BIG 105-110 DAY CORN ADAPTED TO THIN AND RICH SOILS BERRY'S 615

Medium Early 105 to 110-Day

This is a splendid heavy yielding Hybrid for one so early in maturity. It is more widely adapted than any one other variety that we know about. It will give very fine results on the thinner soils, while on rich land it will come through with yields that are simply outstanding. This corn is grown up to northern Iowa. Its early maturity therefore adapts it to a very wide range of climates. Farmers in northern and north central Iowa, Nebraska and on east to Illinois, Indiana, Ohio, Pennsylvania, West Virginia, and northern Virginia will find it to be an excellent main crop variety. It is also grown quite a bit farther south. Farmers in southern Iowa, Missouri and Kansas like to have some early feeding corn and Berry's 615 fills the bill. Or you may want corn that is earlier so as to escape drought conditions that are apt to come. We know of no corn that will do a better job than 615. One field near Clarinda made a dry corn yield of 110 bushels to the acre. This variety is somewhat similar to Iowa 939. It has the same fine feeding qualities, 615 however makes a larger, better formed ear, and has taller, stronger stalks. For an all around, all purpose corn you will find it hard to equal this variety. It may be that you have part of your farm land that would be better suited to 813, 800 or 613. There are others who would like 615 better. We do not mean that it is good only on thin land, as it responds well to increased soil fertility. Its ability to grow under so many different conditions of soils and climates with one such a dependable variety. Be sure to try at least a little of it. You can't go wrong by planting a lot of it.

A HYBRID PLANTING THAT OFTEN OUTYIELDS EVERY OTHER BERRY'S HYBRID BLENDS

The Reason for Making Blends

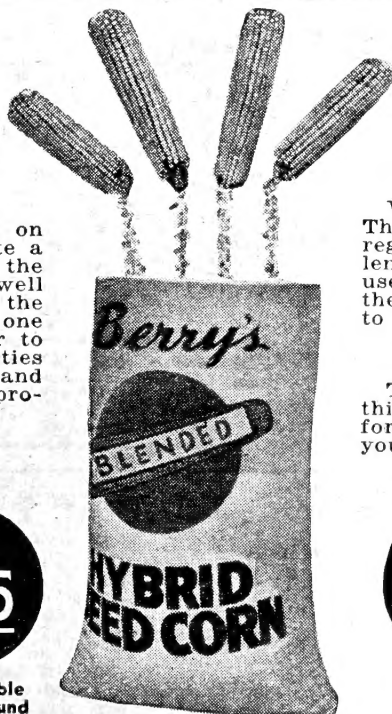

Most Hybrid Corn varieties have a shorter pollinating period than the old open pollinated corn. The old open pollinated corn was a mixture of many varieties. In making Hybrid Corn, inbreeding eliminated these varieties so that the inbred was a single pure line of corn. In making a Hybrid, four of these inbreds are combined. However, the pollinating period of such a Hybrid is shorter. In event that hot weather hits when it is pollinating, a lot of the pollen will be killed which will result in poorly filled ears. The silk on the ears will remain receptive to pollen for quite a long period of time. Therefore, by prolonging the pollinating period we get greater assurance of well filled ears. Even though hot weather should kill the pollen off of one strain, there is always the other one to still come along with pollen a few days later to fertilize the ears. Thus by using two or three varieties of Hybrids that mature about at the same time, and yet have slightly different pollinating dates, we prolong the pollinating period.

Low Seed Cost—Big Yields

Berry's Hi-Yield Blends are made from the varieties that are listed in this catalog. We make our prices low as an added inducement to get you started in trying these Blends. The cost is less than half that many companies are asking for seed corn and we have priced it drastically below our regular prices. We believe that you will report, as a good

Round
Kernels
\$4.75
BU.

Not Available
in Large Round

Thick
Flat
\$5.25
BU.

Comes in One
Size Only

many customers have. One says, "It was the best corn I ever grew." "None of the high priced Hybrids exceeds your Blends." "Your Hybrid Blend was the best corn in the community." "I want more of your Hybrid Blends. They are as good as any." "I sure got some great corn from your Hybrid Blend in a rather poor summer at that." Another writes, "I filled a 120 ton silo from 6½ acres."

Guaranteed Quality—Thick, Flat Grade

We make up these Blends in two grades only. The Thick Flat grade are kernels that are too thick to make regular Flat grade. Although they have about the same length, they cannot be classified as Round, therefore we use this term Thick Flat. In our opinion this produces the sturdiest, most vigorous kind of plant. It is graded to plant accurately when proper plates are used.

Round Grade

This is made up of the regular round kernels. Seed of this kind often produces more vigorous plants and therefore better yields. It is graded for accurate planting and you can make big savings.

Two Blends

110 Day. This is what we call our Medium maturing Blend. It may vary from 100 to 110 days. The later 120 day Blend is about ten days later in maturing. Will mature in 110 to 120 days. Both are excellent. Please specify which Blend you want and whether Round or in Thick Flat. Prices are shown herewith.

High Quality Good Germinating Seed

Dear Sirs: Altoona, Kan.
I have bought Berry's Seeds for several years, and find them to be of high quality and good germination. They have been very satisfactory.

Sincerely, Alfred Erbe.

Splendid Yields—Well Satisfied

Dear Sir: Harrod, Ohio.
I am writing just a few lines to let you know how satisfied I was with your seed. I had a splendid yield this year.

Yours truly, Vernon S. Eley.

Our Production and Grading Improves Quality

Mindo ★ Benton

An Early Maturing Oat—Heavy Yelder

Practically all our seed stocks this year are grown under our own production contracts. They are cleaned and graded to our specifications and that means superior quality for our customers.

These Mindo Oats are growing in popularity because they mature 4 to 5 days earlier than Clinton and Bentons. If hot weather strikes early that can make a tremendous difference in yield in favor of the early kind. This variety was developed by the State of Minnesota but because of its earliness it is liked in the southern section of the spring oat belt. We have had very fine reports on it from Missouri and Kansas, as well as states farther south.

The straw is very strong and little shorter than that of Clinton and Benton. Yields of 109.4 bu. per acre are reported on Mindo in the Iowa official 1948 yield reports. This and the Cherokee are, in our opinion, the best of the earlier maturing oats. We recommend them wherever early oats are wanted. See Item 172 on Price List for quotations on Blue Tag State Certified Mindo.

A Taller Strain of Clinton

This has the same D69 x Bond parentage as Clinton. It resembles it very closely in many ways. It differs in growing a taller straw. It will probably average about 6 inches longer. This is a decided advantage on soils where straw growth is apt to be short. Some tests show it of the same maturity as Clinton. On others it runs a day or two later. In the official 1948 Iowa yield test report Bentons made up to 115.4 bu., per acre. The test weight per bushel averaged higher than any other variety excepting the Bonda. Length of straw averaged around 42 inches. In the two year average, 1947-48 it was surpassed in yield only by Clinton although in some tests Bentons were superior in yield, as well as test weight.

Where a normal season can generally be expected, these larger growing varieties will, as a rule, make the best yields. We carry this variety both in Blue Tag State Certified and our heavy weight recleaned non-certified. See Items 173 and 174 on our Pink Price List for Quotations.

CHEROKEE

A Heavy Testing—Early Oat

This oat in most tests, matures at the same time as Mindo. A few tests show it about a day later. Both are distinctly earlier than Benton or Bonda. The Cherokee has the same pedigree as Clinton, namely, D69 x Bond cross. It is a different selection. The grains are generally plumper than Clinton. It has a plumper type of kernel. Color is a little darker and sometimes has a pinkish tinge of color. The straw length is between that of Mindo and Clinton. Cherokee generally runs a heavier test weight per bushel. Yields of 108.4 bu., are recorded in the 1948 Iowa yield test.

Because of its early maturity it is very popular over a wide area. It is our understanding this oat originated in Iowa but was first released as a commercial variety by Kansas. They considered its performance, under Kansas conditions highly satisfactory, and it will give good results throughout the entire spring oat section. In favorable oat seasons the later oats may out-yield them but if it gets hot early, then early kinds will pay out best. See Item No. 170 for prices on these thoroughly cleaned heavy weight Cherokees.

BONDA

An Extra High Quality Oat

It is significant that in the average of all 1948 official tests Bonda had the heaviest weight per bushel of all varieties tested. This was true in all sections of the state, northern, central and southern. That tells the story of quality when it is superior over such a wide area. In maturity it is about one day later than Benton and the straw a little shorter. Yields of 114.6 bu., per acre were recorded. In some trials the Bondas were ahead of Benton and in others it was reversed. Both are very good varieties.

Bonda is a variety originated by the Minnesota Station. It is a cross between Bond and Anthony. A distinguishing feature of these is that quite a few of the grains have heavy awns. This is a newer variety and there is a good demand for seed. There should be extra profits on that in many parts of the country this year.

For a heavy yielding oat of high quality you'll find this a dandy. See Item No. 175 on Pink Price List for quotations on Blue Tag Certified Bonda.

WHY IT PAYS TO TREAT YOUR SEED GRAIN WITH CHEMICAL DUST

There are certain plant diseases that may be transmitted by seed. These diseases need not necessarily be developed in the seed that is harvested. They may be carried to it from adjoining fields. Then again you may have disease in your soil. If you plant clean seed without protection those diseases may attack clean seed that you sow. The use of a good chemical dust usually controls a good many diseases that may drastically affect yields or quality or both.

Treat Oats, Barley, Wheat and Sorghums

Smut in some form may attack any of these crops. Instead of grain you have a black powdery mass that is of course utterly useless, and it lowers the grade on all of the crop, if the infestation is heavy. You can help keep this under control by treating your seed with Parsons Seed Saver Dust. This is easy to apply as it does not irritate the nose and throat like some chemical treatments. You can use an old churn, barrel, cement mixer or any method that will put a light coating of dust on the seed. It requires only half an ounce per bushel.

Twenty Years of Satisfactory Dealings

Dear Sirs: Eaton, Ohio
I have bought Berry Seeds for almost 20 years and have been more than satisfied. You have fine values and they are always at reasonable prices.

Sincerely yours, Myron S. Burch.

Special Introductory Price on Parsons Dust

We are strong believers in chemical treatment for small grains. It is our desire to do everything we can to encourage the use of it by our customers. The benefits you gain should repay the cost of treatment many, many times. The small investment you make means little to us from a sales angle but it should mean much to you in better crops.

We will make you a Special Price of only 75c per pound Prepaid on this Parsons Seed Saver Dust. 3 lbs., \$2.00; 5 lbs., \$3.00. That makes it cost you only a little over 2c to treat a bushel of small grains. This treatment protects seed by direct chemical action. It's easy to apply. Be sure to use it this year. It's your cheapest crop insurance.

Finds Seed Exactly as Advertised

Dear Sirs: Fulton, Ill.
I have used your seed for a number of years and have always found it very satisfactory. We have always been able to depend on the seed being exactly as you have advertised it.

Very truly yours, Robert W. Lockhart.

Extra Heavy Clintons

Berry's Special GOLDEN BEAUTY BRAND

Guaranteed to Outyield any other Clinton Seed Stock

Clintons at Their Best

We have done a lot of experimenting with Seed Oats. Two years ago we put part of our seed stock through a special grading process. Insofar as we know, no one has ever used this method in exactly the same manner or degree that we have used. This method removes at least 30% of the oats from the average seed harvested. This goes far beyond the requirements for cleaning certified seed. This shows up in the crop in a very noticeable degree.

Results Obtained

We sowed our Golden Beauty Brand of Clintons next to Certified Clinton and they looked like a different variety of oats. The soil was the same but the Golden Beauty Brand stood about 6 inches higher in the field. Many farmers sowed those oats and we have yet to hear from one who was not enthusiastic. Some of our most prominent farmers in this area who grow different varieties have told us our Golden Beauty Brand Clintons were the best they had on their farm. Yield increases of 10 to 15 bushels per acre are reported.

In the official Story County, Iowa, yield contest, these oats were first and about 15 bushels per acre ahead of the second best which were Cherokee. Certified Clintons were third. Many farmers spoke to us early to be sure of getting some more of this seed for next year. Very few dealers are set up to process oats as we do our Golden Beauty Brand. Those who have seen it grow figure that they are money ahead by feeding their own crop and using this specially graded seed.

Characteristics of Clinton

Page 3 of this book gives considerable information on this variety. Tremendous yields. They beat everything in Iowa last year and in 1947. Produced up to 123.8 bu. per acre. Fine meaty, thin hulled grains. Strong straw that stands up even after grain is dead ripe. Widely adapted to different soils and growing conditions. Highly disease resistant. Resists smut, most traces of rust and perhaps most important of all, resistant to blight. That is what has caused such tremendous damage to many of the older varieties in the past few years. You can't afford to take chances. The extra profit in these oats is a big thing.

More Bushels per acre Guaranteed

In preparing our Golden Beauty Brand of Clinton Oats all the small, weak immature kernels are eliminated. You get the strongest largest grains. They are the kind that make vigorous, big healthy plants. It is true a pound of this extra stock does not contain as many grains as small seeded kind. Therefore you should sow at a fairly good rate of around 2½ bu. per acre.

We have seen what these Oats can do and back up our belief in their superiority with this guarantee. Sow Berry's Golden Beauty Brand Clintons next to any other Clintons. Keep a record of yield at harvest time. "If our G.B. brand does not outyield the others, we will refund you the difference between what you paid us for our oats and the cost of our ordinary non-certified Clintons." Therefore this Brand will cost you no more than our ordinary Clintons unless they yield more per acre.

You take no chance on your extra investment and you have every assurance of getting much larger profits.

Good Germinating Seed Scarce

A lot of the oats that were harvested last summer are very low in germination. Many cut their Clintons before the seed was all fully matured. When that seed was placed in storage many of the germs died. Those Oats are generally all right for feed but the germination will keep going down. They will be poorer in March than in January or February. Don't take any chance on sowing seed that does not test high and strong in germination.

Our Seed Oats are largely of our own contract growing. Every lot gets very accurate tests so we know they will grow.

The extra money that you spend for better seed will come back to you several times over in increased yields. Compared to some seed that will be sown this spring it will mean the difference between success and failure. See Item No. 171 on Price List for prices that are really low for such super quality Clintons. It will pay you to demand Berry's Golden Beauty Brand.

CLINTON-59 *A New Variety Selection of CLINTON OATS*

Extra Fine—Blue Tag "Certified"

The Clinton-59 is a selection from the original Clinton oats. It gives you all those great quality characteristics—and "Then some." It's the "Then some" that is creating a big demand for this special selection. It is a day earlier in maturity. That may not sound like much difference but in some years it can mean 5 to 10 bushels more oats per acre.

A more important difference is more uniformity in maturity, in plant height, and in the general character of the plant and the heads. This is a definite improvement. About the only criticism on the Clinton is the unevenness in maturity that is sometimes found. This new "59" selection tends to correct that. Greater uniformity is the big factor of superiority. That—and a little heavier yield. It has averaged about 3 bushels per acre more in a four year test. That extra yield will more than pay the extra cost of the seed so this improved kind of a crop will actually cost you no more than ordinary seed. The way to consider the matter of seed purchases is to look at it as an investment instead of an expense. It pays big dividends.

Big Demand for This Seed

You may recall what a tremendous demand there was for the original Clintons when they were first put on the market in a commercial way. Many farmers made extra profits by growing the crop for seed purposes. The demand for the Clinton 59 will also be heavy as its superior qualities of greater uniformity become better known. By starting these oats in your section you can become a seed supplier in your neighborhood. Good seed can be sold at premium prices, thus bringing you greater profit from your oat acres.

Our seed is the Blue Tag quality, State Certified seed. That assures you of the genuine Clinton 59 variety and the very best commercial seed grade.

Remember, that in this variety you get all the great qualities that have made Clinton famous. Strong straw. Big Yields. Resistance to Blight and most races of Smut and Rust. Even though you have no thought of selling your crop for seed you will find your investment in this Blue Tag State Certified seed a very profitable one. See Item 178 on price list for quotations.

30 Years of Satisfactory Service
Gentlemen: Cameron, Mo.
It would take up too much space for me to tell all about my success with Berry's Seeds in the past 30 years. I have dealt with several Seed Companies but my last word is for Berry's. You have better quality, germination and prompt service. Your seeds prove true to description.

Yours, Gordon C. Littrell.

Golden Beauty Brand Clintons Fine
Deshler, Ohio

Dear Sir:
Last Spring I purchased 3 bushel of Golden Beauty, Clinton type Oats. I planted these on 1½ acres of land and the total yield was 135 bushels or an average of 90 bu. per acre. They weighed 38 lbs. at 12.5 moisture test.

Your truly, Londs A. Ziegler.

SPRING GRAINS *that are Popular* MONEY MAKERS

SPELTZ

A Great Drought Resister

PRACTICALLY RUST AND SMUT PROOF

This picture shows what this remarkable grain looks like. It is really a type of wheat. It is very nutritious. The shucks cling to the two grains each carries. Grain is a little softer than most wheat. Makes wonderful ground feed. It yields well and is a very profitable crop under dry conditions. The grain is highly resistant against most races of rust and practically immune to smut.

Speltz is one of the oldest grains known to mankind. Apparently it was grown in prehistoric times. German-Russian immigrants introduced it into the United States. The Speltz we have is for spring seeding. It is grown from Canada to Texas, Iowa, Minnesota, Wisconsin, Michigan and states to the east are growing it as well as Western states where drought conditions are most apt to prevail.

Speltz is valuable as a nurse crop as it has a very strong straw. It matures early. Sow $2\frac{1}{2}$ bu. per acre as early in the spring as possible. Cut before dead ripe. Thrash about like oats. See Item No. 202 on our Pink Price List.

WISCONSIN 38

THE BARBLESS BARLEY

This is one of the finest varieties you can grow. That is why it is so popular. Produces big yields. Fifty bushel per acre of rich body building food are obtained. That is 2400 lbs. or equal to 75 bushel of oats. Pound for pound we prefer barley for feed. It is extra good for hogs. Builds nerves, muscle and sinew. It puts on fat.

Barley is rated by many farmers as the most profitable of spring grain crops. This Wisconsin 38 is grown over a wider area than any other variety we know about. It has awns or beards. However, there are no barbs on them. They are as smooth as straw. That makes it nice to handle and the straw has greater value. The straw of this variety is quite strong. It makes an excellent nurse crop for grass and clover seedings. It is a Malting Barley.

All our Barley varieties listed here are for spring sowing. Put it in as early as possible using 2 bushel per acre. It should mature in central Iowa about July 15. Grow better barley; make bigger profits by sowing better seed. Order it now. Supplies of good seed we ask you to buy early. See Item No. 191 on Price List. If you mislay our Pink Price List write us. We'll send another promptly.

MONTCALM

This is the new sensational barley that sold last year for as high as \$12.00 per bushel. You can buy it from us this year at less than one-fourth that price. There is still good money in growing it. It is a big yielder and you should be able to get premium price for seed in many sections.

In a three-year official test in northern Iowa it out-yielded all other varieties in this test. In central and southern Iowa it also outyielded those great varieties like Wisc. 38, Odessa, Mars, Kindred, and Peatland. It also showed a 2-pound per bushel heavier test weight there. This is a six-row, smooth awn spring barley. The straw grows erect, fairly tall and the grain is of medium maturity. It ripens two days ahead of the Wisc. 38 and has about the same length of straw. It has greater resistance to disease than many of the older varieties. That may be one of the reasons for its superiority.

It is an accepted malting variety. The tremendous demand for this Barley is clear proof of its profit features. We urge you to grow some. See Item 190 on our Pink Price List.

ODERBRUCKER

This is one of the older varieties. Like Wisconsin 38 and Velvet it is a malting type. It still ranks high in popular favor. It has great disease resistance. Some know this as Wisconsin 55. The grain has rough beards. Since much grain is combined that is not so objectional. The large acreage sown to Oderbrucker is evidence of its money making ability. Produces big yields and plump kernels. Our seed stock is guaranteed to please you. See Item No. 192 on Price List.

Good Seeds and Nursery Stock

Gentlemen: Canon City, Colo.
I wish to state that Berry's Seeds are very good, not to mention your prompt shipping service. Also, your nursery stock is the best I ever used.

Very truly yours, Frank Dilley.

SPARTAN

This is a feeding Barley. It is not suitable for malting. Makes wonderful feed. Fine for pearling. It is a two-rowed variety. Spartan is very drought resistant and has a very strong straw. It is a grain that stands up well even on rich land. The heads have smooth awns or beards like the Wis. 38.

Barley is a great grain to put in swill for hog feed. Its big yields of large kernels make it a fine profit grain. Resists drought and disease. We don't know of a feeding barley that will excel it. See Item No. 193 on Price List.

Two Generations Endorse Berry Seeds

Dear Sir: Amoret, Mo.
I have planted Berry's Seeds for several years and have always been very pleased with the results. My father used your seeds when he was farming, and I know from experience that they are good.

Your customer, Walter K. Ewbank.

MIDA

The SPRING WHEAT

WE RECOMMEND ABOVE ALL OTHERS
FOR YIELD AND QUALITY

There is a big demand for Wheat
Get in on extra profits by growing Spring Wheat
"Selected Northern Grown Seed"

We have chosen this variety because year in, year out we believe it is the best of all. You may find some variety for which this or that is claimed. Some years under some conditions they may measure up. We believe you want a variety that will most consistently give the best performance. One that is most certain to give you big yields of high quality wheat. In our opinion this is it.

This heavy yielding high quality spring wheat is a great favorite in the spring wheat area. It has practically crowded out the Thatcher because that variety is so susceptible to leaf rust. Rust in some years almost completely ruins wheat crops. The Rival also ranked high in popularity for some time but most growers are switching to Mida because it has a somewhat stiffer straw and is less subject to loss from shattering.

A Very High Quality Wheat

In many tests Mida has shown a higher average yield than Pilot, Rival, Thatcher and Renown. Also it is definitely superior to the old Marquis and has outyielded the Newthatch. Mida is a bearded wheat with high resistance to both leaf and stem rust and to stinking smut. The kernel is large, dark red in color and the grain has a high test weight. It has very satisfactory milling and baking qualities.

The story back of the development of Mida wheat by the North Dakota station involves tracing many varieties and crosses. The important fact is that it has made available to you a spring wheat that is definitely superior in practically all important characteristics. It is a wheat that will help you make more money.

The seed we have is northern grown which is the most desirable. The seed is heavy weight, recleaned, high germinating. Such seed is always the most economical. Sow 1½ bu. per acre. Early spring seeding is advisable.

See Item No. 199 on Price List—Write Us if Price List is Mislaid

BUCKWHEAT

You can often turn acres that might be wasted into big profit makers with Buckwheat. Land that has been flooded can often give you a good return. Acres not otherwise used can be sown to it. It is a quick-growing grain crop. Matures in 10 to 12 weeks. Excellent catch crop. Sometimes sown after small grain so as to get two crops from the land. Good cover crop for orchards. Makes land mellow. Good for bee pasture.

One of the best crops for very poor soils. Responds to increased fertility. Does not like lime and should not be sown on very wet land. Can be grown most anywhere north of the cotton belt. Prefers cool weather, especially at blooming time, but is sensitive to frost. Prepare a good seed bed. Sow 3 to 4 pecks per acre. Yields up to 50 bu. per acre depending on conditions. See Item No. 203 on Price List. Postpaid 1 lb., 30c; 5 lbs., \$1.00.

FIELD PEAS

We are often asked, "What can I sow early in the spring that will make me a big hay crop this year." The answer is Field Peas. They make wonderful feed too when cut and fed green. They can be sown as early in the spring as the ground can be worked. Disc or harrow in a bushel of Peas with two bushel of oats. Peas are vine-like, the oats help hold the crop erect. The crop will come on fast. Cut the crop for hay when the oats are in the dough stage. The production is very heavy and feeding value very high. The crop is very fattening. Increases milk production. Excellent for hogs. Solves the problem of early green feed or hay as no other early crop can do. Fine to plow under for soil enrichment. Inoculate your seed. See page 27. Seed supplies limited. See Item No. 189 on Price List.

Note—Do not confuse these with cowpeas which want warm weather. Field Peas want cool weather.

WILT RESISTANT

FLAX

FOR BIG SEED PROFITS

The great need for linseed oil is keeping the demand for flax seed very high. Prices should remain at high levels for some time. The government guarantee is \$6.00 a bushel. With yields of 12 to 18 bushel per acre you can see flax can be a highly profitable crop.

Flax is easy to grow if you sow it on relatively clean land. When sown early in the spring on a firm seed bed it is easy to get a stand. Requires ¾ to 1 bu. of seed per acre. Flax is a wonderful nurse crop for grass and clover seedlings because it does not shade the ground too much. By growing the crop on soybean land or following a corn crop you will have land quite free from weeds. Can be grown in most of the spring grain area where rainfall is 25 or more inches per year.

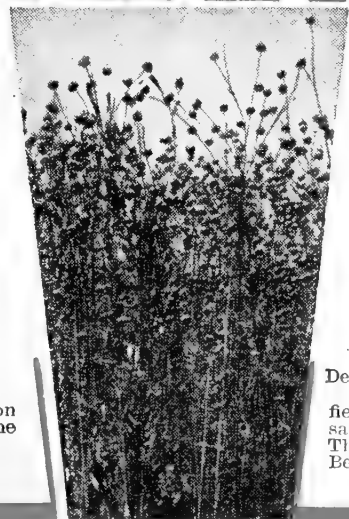

Flax Is Widely Adapted

Flax is now being grown over a much wider area than a few years back. New

Blue Ribbon from Berry's Seeds

Dear Sirs: Clear Lake, Wisc.
I got a blue ribbon at our fair on the Clinton Oats I got from you. They sure are swell and the best Oats I ever raised.

Yours truly,
Ole P. Korsbon.

Wilt Resistant Varieties make it profitable where the older kinds were failures. There are a number of good varieties.

Bison. One of the most wilt-resistant kinds. Also resists rust. Larger seed than the average. Produces very heavy yields. Generally contains more oil. This is highly popular. Seeds are dark brown. See Item No. 201 on Price List.

Certified Dakota. A new and exceptionally fine flax. Outyielded all other kinds in a series of Iowa tests. Widely adapted. Thrifty grower of mid-early maturity. Medium sized brown seed produces a high grade of oil. Plant is highly resistant to rust and wilt. Wherever Dakota is introduced farmers do not want any other. Seed is scarce. Demand Certified seed. See Item No. 200 on Price List.

Always Boosts for Berry Seeds

Dear Sir: Moorehead, Ia.
For the past 25 years I have purchased all my field seed from you. I have always been perfectly satisfied. Your seeds are all anyone could ask for. That means perfect quality. I'll always boost for Berry's Seeds, both field and garden.
A satisfied customer, Lewis W. Shepard

A Heavy Producing Fast Growing Sweet Tasting Crop

ATLAS SORGO

Early Drouth Resistant; Very Palatable and Nutritious

This is one of the most sensational Forage Crops ever developed. It is an enormous producer. Yielded up to 18.7 tons per acre, under conditions where corn yielded only half as much. In dry seasons it has out produced corn in grain yields 3 to 1. Nebraska and other States report it the heaviest forage producer. With favorable moisture conditions Corn may outyield it in grain production, but we know of no other crop that can equal it as a forage producer. From Nebraska, through Iowa and on East, down South to the Gulf it is a wonderful fodder crop. The juice of Atlas Sorgo is very sweet. That makes Atlas Sorgo highly palatable to livestock, and it is a very nutritious feed. Cattle especially will leave most any kind of feed to get at Atlas Sorgo. They thrive on it. In extreme drouth years we have seen farmers bring their stock through the winter with nothing but Atlas Sorgo fed right out of the shock. It brought them through in excellent condition, fat and sleek in the spring, as though they had been fully corn fed. This crop also makes wonderful ensilage.

Highly Drouth Resistant

The average crop like corn for example, if it is severely injured by drouth it will stop growing. Atlas Sorgo on the other hand will start up again. In sections where drouth completely dried up corn, Atlas Sorgo remained green. The crop also seems highly resistant against grasshopper damage. Where one corn field was almost completely wiped out by grasshoppers, Atlas Sorgo was practically untouched. This ability to stand up under unfavorable conditions makes it an extremely valuable crop. Grows 10 to 12 ft. tall. It has good strong stalks. It is very resistant against lodging. The seeds of Atlas Sorgo are white and very palatable. Plant 8-12 lbs. per acre at corn planting time or after. Rows 40 inches apart. Cut a little before frost. Shock to cure.

We have a supply of fine quality seed. High germinating. All forage seeds, including Atlas Sorgo, are extra nice quality this year. This was due to a good growing season and unusually favorable fall weather for harvesting. See Item 220 on Price List for quotations.

NORKAN

Sometimes
Known as

Early Atlas

This crop very closely resembles Atlas Sorgo in the way it grows and in the type of grain it produces. It is, however, quite a bit earlier in maturity (about 10 days to 2 weeks earlier). That means, of course, it can be successfully grown much farther north than Atlas. In areas south of Central Iowa the Atlas would produce more tonnage as it makes a taller growth. However, areas having shorter seasons or for planting later in the season this Norkan is a good selection. While it will not make as tall a growth, the grain yields generally equals Atlas.

This crop is a cross of Atlas Sorgo with Early Sumac Cane. It is sweet stalked and very palatable as a fodder crop. Plant like Atlas. Some double row these crops using 15 to 20 lbs. of seed per acre.

We have some beautiful seed for you. See Item 221 on Price List.

Small Lots, Postpaid, any variety described on this page: 1 lb., 25c; 5 lbs., 90c; 10 lbs., \$1.50.

Picture shows grain production of Atlas Sorgo. Makes wonderful feed stalks and all fed right from the shock.

MILLETS

Be sure to drop us a card if you mislay our Pink Price List.

German or Golden

This is that beautiful, heavy growing variety that makes such wonderful production. Its leafy growth is 4 to 5 feet tall. Yields up to 4 to 5 tons per acre and seed yields of 40 to 50 bushels. The feeding value is fine. It is one of the most popular varieties of millets and very widely grown.

This crop can be sown any time after corn planting until the latter part of July. Sow 40 to 50 lbs. per acre for hay production; 25 to 30 lbs. per acre for a seed crop. See Item 225 on Price List.

White Wonder

This runs our Golden Millet a close second in popularity. Many think it is better. It has a dense foliage and broad leaves. A wonder for production. Matures early in spite of its big size. It has long heavy seed heads and is a good seed producer. Color of seed is white.

Millets make an excellent "catch crop" or to give an extra crop after an early maturing one has been taken from the land. Item No. 228.

Siberian or Early Russian Type

Two to three weeks earlier than German, but does not yield as much. Hay is of very fine quality. Grows 2 to 4 feet. Sow 35 to 50 lbs. per acre. See Item 226 on Price List.

Proso or Hog Millet

Also Known as Broom Corn Millet and Russian Wheat

This Millet is grown almost exclusively for seed. A very prolific producer. Seeds are larger than other millets. Makes fine feed. It is used in some countries for human food. Equal to Barley in feeding value. Makes extra fine poultry feed.

Proso is a heavy seed producer, yielding up to 60 to 70 bushel per acre. It matures in sixty to seventy days. Makes a good cash crop. Needs warm weather and soil for quick germination. Sow 40 to 50 lbs. per acre. Drill in close rows or broadcast. Item No. 227.

BERRY'S ANNUAL PORK PRODUCER

A rapid growing mixture of legumes, forage and grass crops. Can be used a few weeks after seeding. Very productive. High in protein. Builds big body frames, reduces grain consumption. Makes hogs of marketable size in quicker time. Contains Vetch, Rape, Rye, Barley, Oats, Wheat, etc. Sow 50 to 60 lbs. per acre early in spring. 25 lbs. See Item No. 234.

Showing the growth of Billion Dollar Grass

Billion \$ Grass

This is a tall growing variety of Millet that has high yielding ability. With favorable moisture conditions it yields up to 26,000 to as high as 50,000 pounds of green feed per acre where produced. It also has the ability to produce a lot of seed. Seed yields of 1000 to as high as 2000 pounds per acre are reported. It does not stand heat and drouth as well as Sudan Grass or Atlas Sorgo. Yet we have had some wonderful productions even in dry years. This crop is especially grown in Iowa and states to the north and east, including the New England states. Farther south we would consider Sudan grass, Sorgo or Norkan better. Billion Dollar grass is a fast growing crop. It can make a hay crop in 6 to 8 weeks after seeding. Do not sow too early, generally around corn planting time or after, even into June or July. We recommend sowing 20 lbs. of seed per acre. It will grow up to 6 to 8 ft. high on soil of good fertility. It makes good feed for cattle and sheep. It is widely used for pasture. It does not become poisonous because of drouth or frost. By ordering early we can take care of your orders.

For Price See No. 232 on Price List.

Berry's Seeds Best in Purity and Cost

Dear Sir: Mt. Horeb, Wis.
I have a 115 acre farm and have been farming for myself 30 years. During that time I have bought from many different seed companies but the biggest difficulties were purity and high cost. But, during the past few years I have bought all of my seed from Berry's. Your seed cannot be beat for purity and reasonable cost.

Yours, Orvin Barton.

Quality High—Prices Low

Kyles Ford, Tenn.

Dear Sirs:

I find your seed to be of the same high quality that you recommend. I get good yields. Also, the prices are low and I like your different grades of various seeds.

Sincerely yours, C. Jack Johnson.

GET MAGAZINE

Owners, renters, operators and managers of farm land, their families, and merchants who do business with farm people should read this big, live, magazine. **FARM JOURNAL** and **FARMER'S WIFE**, the world's largest farm magazine, is now read by more than 2,700,000 families. Each issue has departments for men, women, boys and girls. Clean and wholesome, no liquor advertisements. The low subscription prices shown below make it a real bargain for folks who have farm interests.

Recommended by
BERRY SEED COMPANY

OTHER MONEY MAKING CROPS FOR GRAIN, HAY AND PASTURE

CANE

MAKES TREMENDOUS YIELDS

This forage Cane is very rich in sugar and fat. It is a very palatable crop. Its yields are enormous as it produces 10 to 15 tons of excellent green feed on rich land. It also is a remarkable drought resistor. It is especially valuable in dry, hot seasons. You can use it either for fodder or for hay. If you want it for hay make the seeding at a heavier rate of 75 to 100 pounds to the acre. For a fodder crop you can drill it in rows as far apart as corn rows, using around 10 pounds to the acre, or double up the rows and use 20. For hay the heavier your rate of seeding, the finer the growth. Some farmers sell their regular hay crop for cash and use Cane for their own feed supply. A few acres of Cane will make as much hay as many acres of Timothy and livestock will relish it and fatten on it. It also makes wonderful ensilage. It is a good seed producer yielding as high as 60 bushels to the acre. Do not plant it until corn planting time or after. It wants warm weather and a warm seed bed.

Early Amber type, the kind most generally grown, a great value because of its splendid growing power. **Item 216 on Price List.**

Early Orange type, heavier stalks, more abundant leaves, heads more compact. Heavier yielder but a little coarser. Cane seed is more plentiful this year. **See Item No. 215 on Price List.**

CANE FOR SORGHUM PURPOSES

The above Cane is for fodder purposes. To make good Sorghum the seed must be from pure strains. We use great care in getting our sorghum seed. We cannot guarantee the crop but we do consider it equal, if not superior to any on the market.

This was secured for molasses purposes from Cane that had been used in making sorghum. It makes molasses of excellent quality, both as to color and flavor. It is juicy and is the choice of most sorghum makers in this section who call it Kentucky Red Top. **See Item 214 on Price List.**

Postpaid, 1 lb. 30c; 5 lbs., \$1.25; 10 lbs., \$2.00.

ENORMOUS YIELDING HIGH PROTEIN PASTURE

DWARF ESSEX RAPE

A Crop that Will Help You Reduce Pork Production Cost

This is a very rapid growing crop. It is one of the greatest of quick growing forage and pasture crops for the cornbelt. It can be pastured within 6 to 8 weeks after seeding. You can sow it any time from early spring until next summer. Rape is equal to Alfalfa in feeding value for hogs and sheep, and it also is good for calves, cattle and horses. With Rape pasture you can cut down the amount of grain that is required, and you will get your hogs ready for market quicker. In tests at the Iowa Experiment Station Rape pasture cut down more on grain consumption and tankage than when they were fed on Alfalfa and it carried more head per acre.

Rape, under favorable conditions, will yield 40 tons or 80,000 lbs. of green matter per acre. On a dry basis it analyzes high as 37% protein. It is also high in calcium and phosphorus. It is superior to Alfalfa and Clover as a corn balancer. Provides pasture from early spring until the ground freezes in the fall.

Rape is a crop that grows and makes a heavy leafy growth. The leaves look somewhat like cabbage leaves, but it does not form heads. One of the finest things about it is that it grows so fast. If you are looking for a quick pasture, especially for hogs and sheep, you will find it hard to excel Dwarf Essex Rape.

Be sure to grow some. Sow it alone in the spring or with Oats and pasture when the Oats are removed. Some sow about the same time they sow Oats, others broadcast when the Oats are up a bit, and let the rains cover it.

Only requires about 5 or 6 lbs. of the seed per acre. It grows on many soils. It does best on fertile, well drained loams. It is not so well adapted to sandy or stiff clay soil. Our seed is guaranteed genuine Dwarf Essex Rape, obtained from the best seeds grown in the United States.

See Item 233 on Price List.

Postpaid, 1 lb., 35c; 5 lbs., \$1.40; 10 lbs., \$2.60.

Always Gets a Stand and Saves Money

Gentlemen: North Tazewell, Va.
I have been buying your seed for years and I always save money. Your seeds are just what you say they are and I have never failed to get a stand. I always speak a good word for Berry's.

Yours respectfully,
Joe N. Hunt.

Sows More Acres Because of High Quality

Dear Sir: Freeport, Ill.
I have been sending to you for my seed for the past several years and have been well pleased. This last spring I sent in an order but when the seed came it looked so good that I decided to sow more. It has been very satisfactory.

Yours truly, Henry Kortemeier.

HEGARI

This is a sweet sorghum, somewhat after the order of the Atlas Sorgho and the Norkan, described on the previous page. It does not grow as tall. The stalks are very sturdy. The crop is very nutritious, whether used as a fodder, for ensilage, grain or even as pasture. Hegari yielded up to 5000 pounds of grain per acre and up to 8 tons of ensilage. Livestock, especially cattle, are very fond of it because of its sweet taste. It combines the grain production of Kaffir and Milo with the high forage value of Cane. For grain production, drill it in rows, about as far apart as corn rows, using 6 to 8 pounds to the acre. You can double row it, using double the amount of seed. Should you want it for hay, put in at least 75 pounds to the acre in close drill rows or broadcast it. It matures earlier than Atlas. The growth is at least three foot shorter. **Item 217 on Price List.**

MILO

THE EARLY MATURING COMBINE TYPE RIPENS IN ABOUT 90-95 DAYS

This new low growing Milo Maize has become one of the most popular of all the grain sorghums. It is a plant that has been dwarfed insofar as stalk growth is concerned. For grain production, however, it has remained very high. You can harvest this grain with an ordinary grain combine. Therefore if the crop has matured so that the seed is good and dry, you do not have to first cut it and shock it, you can combine it right out of the field. The seed is red in color and the feeding value runs quite close to that of corn. You will find this extremely drought resistant. It makes good feed for cattle and widely used for chicken feed. You get good insurance on a crop of grain by having some of this drought resistant grain growing on your farm. In small quantities the same price as Hegari. **Item 222 on Price List.** Write us if your Price List is mislaid.

KAFFIR CORN

The stalks of Kaffir Corn are less juicy than Cane, Hegari or Atlas. They are not sweet. They stand a lot of dry weather. Makes wonderful poultry feed. Produces up to 40 to 50 bushels per acre. For grain drill in rows 30 to 40 inches apart, 6 to 8 lbs. to the acre. One way of thrashing it is to cut off the heads, cure them for 10 days to 2 weeks and then thresh. It is especially well liked for winter poultry feed. **Item No. 223 on Price List.**

EARLY KALO

This early Kalo is a very drought resistant grain sorghum, while the heaviest producer in its class. Becoming very popular in sections outside of the grain sorghum section because of its fine quality and wide adaptability. Grows 3 1/2 to 4 ft. high. Matures in 95 to 100 days. Stalks are slender. **See Item 218 on Price List.**

SOY BEANS

MONEY MAKING VARIETIES

There Is Big Money in Soybeans

The great need for Soybean oil has created a tremendous market for beans. The oil has a great many uses. The demand will continue strong for many years. Oil meal is used as a valuable protein supplement in feeding live stock. As a hay crop soybeans outyields Red Clover and is equal to it in feeding value. They make a fine green manure crop. Soybeans alone or with Sudan Grass may be used for summer pasture. The crop withstands heat and drought.

Soybean seed yields will vary according to soil, season and locality. 20 to 25 bushel of beans per acre are common. Some sections consider 30 bushel nearer average. Lincolns have yielded 45.9 bu. per acre.

Varieties to Plant

See page 3 for description of NEW HAWKEYE bean

The ones we handle are selected because of characteristics that we consider outstanding. For early maturity the Richlands are excellent. Mukdens are our choice for Medium Early and Lincoln for principal corn-belt sections. That takes in all areas having climatic conditions like the southern 2/3 of Iowa and the northern half of Missouri. Lincolns and Mukdens can also be used for hay. If you want the crop principally for hay grow the Virginia Brown or Kingwa Black.

Variety Description

Richland. A fine early yellow bean with high oil content. Averaged 30 bushel per acre in 4 years central Iowa test. About 7 days earlier than Illini. Not quite as early as Earlyana. Straw very strong. Will stand up on richest ground. Somewhat shorter than average on thin land. Adapted to southern Minnesota, Wisconsin, Northern and Central Iowa and sections having similar conditions. Good for late planting farther south. **Item No. 183 on Price List.**

Mukden. A little later than Richland and a little earlier than Lincoln. An excellent bean for sections similar to north central and central Iowa. Very popular in southern Iowa because they can be harvested fairly early, and are very heavy yielders. High quality yellow bean with a very strong straw. **Item No. 184 on Price List.**

HORN SEED SOWER

Simplest of all seeders. Sows all smooth seed like Clovers, Timothy, Alfalfa, Lespedeza, etc. Seed flows from sack through a tube that you swing to and fro. Has gauge to regulate amount of seed to sow per acre. Price Postpaid \$1.35.

HAIRY VETCH

LIVES OVER ONE WINTER

This is also known as Winter Vetch because it is very hardy and will winter over in most any part of the U. S. The crop has as wide a range of use as Red Clover. Makes excellent hay. It furnishes pasture the first season when sown in the spring and makes a full hay crop the next year.

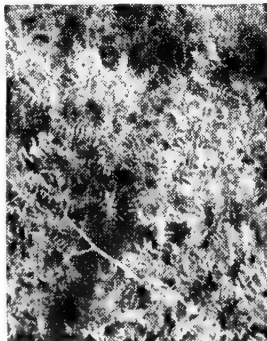

Winter Vetch is an excellent cover crop to use in orchards. It is a wonderful crop to plow under for green manure. The root system is very fibrous and it is a great nitrogen-gathering plant. You add a lot of humus as well as soil-building elements to the land. Winter or Hairy Vetch does especially well on sandy soils and is one of the most profitable crops to grow on such land. It can be grown successfully on any well-drained land. This Vetch is highly drought resistant and also quite resistant to Alkali. It will germinate well on soils too Alkaline for most legumes. You can sow in spring or fall. When fall sown, acts as a winter annual like wheat. Remains green late in the fall, starts early the next spring. Is often sown with winter grain to help support the crop which has somewhat weak stems for its heavy growth. Sow 20 lbs. per acre. Inoculate your seed. **See Item No. 205 on Price List.** Postpaid 1 lb., 45c; 5 lbs., \$2.00; 10 lbs., \$3.75.

Always Good Seeds for a Long Time

Dear Sirs: Plattville, Wisc.
We have used Berry's Seeds for a long time and have always had good results. We are very satisfied.
Yours very truly,
Ernest Stanton.

VETCH

SPRING VETCH

AN ANNUAL VARIETY

This Spring or common Vetch is not as hardy as Winter Vetch and should be sown only in the spring excepting in areas where temperatures do not go below zero. The seeds are much larger and the plant makes a coarser growth than Winter Vetch. Although it does not stand extreme cold it does prefer a cool-growing season. It can be grown as far south as regular field peas can be grown. This does not mean Cowpeas but the true peas. In fact, you can use this crop like Canada Field Peas. A good practice is to sow with oats and cut the two together for hay while the oats are still green.

Sow the crop early in the spring. It will stand pretty cool weather and some freezing, same as peas. Sow 40 to 50 lbs. per acre with a couple of bushel of oats. Vetch grows 3 to 5 feet high. Grows fast and yields are heavy. Makes excellent feed that is high in protein. The crop also may be used as a green manure crop and plowed under while in bloom. Then, you of course, get no crop but you will add a lot of humus and nitrogen to your soil. It is necessary that Vetch seed be inoculated. The cost is reasonable. See page 27 for information. Package of Inoculation for 100 lbs. of Seed Costs only 50c. **See Item No. 204 on Price List.** Postpaid 1 lb., 35c; 5 lbs., \$1.50; 10 lbs., \$2.50.

Marvelous Mixture—a Great Crop. See Page 21

Dear Sir: Amsterdam, Mo.
I bought 6 bu. of your "Marvelous Mixture" and the photo I have enclosed, will show a stand clear up to my armpits. It's a wonderful crop. Your seed has always been very satisfactory.
Yours very truly, A. E. Semsch.

GRASSES

For Hay and Pasture

CRESTED WHEAT GRASS

See Item No. 140 on Price List

If you need a highly drought resistant grass use Crested Wheat Grass. It has made a very satisfactory growth in sections having as little as 10 to 18 inches of annual rainfall. It has yielded three tons per acre in more humid sections and seed production up to 900 pounds per acre is reported. This is a deep rooted long lived perennial grass. It is fine stemmed and leafy. The roots go down as much as eight feet and are very dense. It does not however, spread by underground root stock. Therefore it is easy to eradicate any time you do not want it. It does not have a tendency to become sodbound like some dry land grasses do or to deteriorate very readily in value.

Comes on Early—Grows Late in the Fall

Crested Wheat Grass starts growing unusually early because it likes cool weather. It is extremely winter hardy. No amount of freezing seems to hurt it. It will start growing in the spring one to two weeks before Brome Grass which also is an early starter. It also grows very late in the fall. During hot summer it will become dormant. However, it responds quickly to a little fall moisture. We do not know just how much heat it will stand but it has been grown in Colorado, Illinois and certainly is worthy of trials in the south and east.

Other Valuable Characteristics

Crested Wheat stands close grazing and trampling remarkably well. One test was grazed continuously for five years from early spring until late fall without apparent injury. Because of its heavy root system it has proven to be a good one to use in fighting weeds. The grass is palatable and relished by all kinds of live stock.

We suggest sowing 10 pounds of seed to the acre, sown on a well prepared seed bed. Cover the seed lightly but not deep, and if possible, roll it after seeding. Relatively early seedings when the weather is cool and moisture conditions most favorable, are best for quick germination. In real dry sections the seed can be covered a little over a half inch. Price Postpaid 1 lb. 85c; 5 lbs., \$3.75; 10 lbs., \$7.25.

DOMESTIC RYE GRASS

See Item No. 128 on Price List

Makes Full Production the Same Year It Is Sown

We receive many requests for a grass that can be sown early in the spring and still make a good growth that same year. You know that grasses like Kentucky Blue Grass and Timothy do not make a large growth the first year, under average conditions. Domestic Rye Grass on the other hand makes a good yield early. You can sow it as early as any other grasses, about small grain seeding time. It sprouts quickly, then it grows fast.

There are other quick growing grasses such as Sudan Grass, Billion Dollar Grass, but they cannot be sown until the ground is thoroughly warm, around corn planting time. Domestic Rye Grass will not grow as big as those crops but in the regular grass line is one of the finest for early spring seeding.

Other Characteristics

The Domestic Rye Grass will normally not live over winter and should be considered as an annual. Its greatest value is as a pasture crop and it has special merits in mixtures. The leaves are somewhat like Blue Grass but a little broader and lighter green in color. It also grows taller. Do not confuse this crop with Rye that is sown for grain as it is entirely different. Most of the lawn grasses contain Domestic Rye Grass which provide green growth while the slower growing grasses are getting started. It responds well to favorable moisture conditions and to good fertility. We also use this Domestic Rye Grass in our Grow Quick combination as well as in the Thrifty Mixture and some in the Master Mixture.

There is an ever increasing demand for this type of grass. It fills big needs and it is economical to sow. The seed is fairly large and if sown alone you should use 25 pounds to the acre. In mixtures it can be proportioned as desired. Like other grasses sow it early on a firm seed bed and cover lightly.

Small lots postpaid 1 lb., 35c; 5 lbs., \$1.50; 10 lbs., \$2.65.

TIM RED TOP WITH TIMOTHY

See Item No. 126 on Price List

Reduces Seeding Cost

Red Top seed is very scarce this year due to unfavorable weather conditions. As a result prices of Red Top are quite high. Timothy seed is very short too. However, in this combination you can get a fine seeding at the lowest possible cost for this year.

We frequently get some lots of Timothy containing Red Top. By using these together with straight Red Top you get an excellent mixture. Our customers have been using this for years with great satisfaction. Many sow it alone. Others mix it with Alsike, Ladino or other clovers. Adapted to a wide range of soils and climate. Both of these grasses grow on poorer soils than the average. Red Top especially stands a lot of acid and is good for wet land too. Both do well on clay and loam soils and are rapid growers. Fine for soil erosion control. This is about a fifty-fifty mixture of well cleaned seed. Ten pounds will sow an acre.

You can make a big saving on Lot "Tim" but buy it early as supplies are very definitely limited.

RED TOP

See Item No. 127 on Price List

No other grass will grow under as great a variety of conditions as Red Top. It will grow on soils so poor in lime that most other grasses will fail. Next to Reed Canary grass it is best for wet land. It is also very drought resistant. You will find this fine to sow for quick pasture, to prevent soil erosion, or in waterways. Red Top is almost certain to make a stand. It is easy to get started. It seldom fails. Red Top is second only to Blue Grass as a pasture plant in the northeastern part of our country and will grow where Blue Grass often fails.

Red Top is adapted to the entire country. It thrives from Canada to the Gulf, New York to California. It is a vigorous grower and quickly forms a turf. When used with Timothy it generally increases the yield and matures about the same time. It is a perennial grass. Seedings last for many years. Supplies of Red Top seed are very short this year. Be sure to place your order early to get your requirements. Red Top is a very small seed and when sown alone 10 lbs. per acre is sufficient. When mixed 4 lbs. per acre is very good. You can use it as a top seeding on thin stands of hay or pasture land. Sow it in early spring or late summer.

Postpaid 1 lb., 90c; 5 lbs., \$4.00; 10 lbs., \$7.75.

Order Grass Seed Early

Most grass seed stocks are short this year. Bromus, Red Top, Crested Wheat and Timothy are very short. Buy early in order to be sure of getting the kind you want and at lowest prices.

If you have mislaid the price list that goes with this catalog drop us a card. We will be glad to send you our latest price list promptly.

ENGLISH BLUE GRASS

See Item No. 143 on Price List

This is a grass that is very widely adapted. It is a crop that can be used both for hay and for pasture purposes. It yields around two tons of hay per acre on the average land. The grass grows to a height of 15 to 20 inches, depending a good deal upon the conditions. It is a very valuable grass to use in pastures, because it comes on early in the spring and keeps on the job until late in the fall. The value of the grass is greater early and later, rather than in midsummer. It is a fine grass, however, in the territory to which it is adapted.

English Blue grass will grow well from Kansas and Nebraska east to the Atlantic coast. It has been grown from Canada to the Gulf. This takes in most of the eastern part of the United States. It may not do too well in the extreme south. This grass is not critical as to soils. It is very well adapted to wet lands. It is like Red Top and Reed Canary grass in that respect. It is a long lived grass. It will last longer than Timothy seed. You can sow it either alone or in a mixture with other grasses, or grasses and clovers. It adds variety to pasture and increases the value. If you sow it alone, use around 20 pounds of seed to the acre. You can mix it with other grasses, using such a percentage as you might desire.

Small lots postpaid 1 lb., 45c; 5 lbs., \$1.75; 10 lbs., \$3.25.

Big Savings Even Though Far Away

Gentlemen: My purchases from you have been very satisfactory indeed. The seed is high in germination, while the price, with freight added, is a big saving, not withstanding the long distance in shipment.

Very truly yours, T. W. Peace.

Berry's Seed Fine for 15 Years

Dear Sirs: Liberty, Ind. The seeds I have bought from you for the past 15 years have done a good job for me. When I think of seeds, I think of Berry's. I will be needing more seed for Spring sowing. Many thanks for the services you have rendered me.

Very truly yours, B. F. Bean.

BROME GRASS

★ HIGHLY PRODUCTIVE
★ EXCELLENT FEED
★ DROUGHT RESISTANT

One of the Most Valuable of All Grasses

There is a tremendous interest in Brome Grass throughout the north eastern quarter of the United States. From Kansas to the Dakotas, across the entire nation, Brome Grass is showing itself to be a very profitable crop. Practically every state experiment station has one or more bulletins or circulars telling about this great crop. They all praise its drought resistance which comes from its deep root system. Its palatability which it keeps even after plants are dry. Many give reports on the high feeding value and heavy production of Brome especially when grown with Alfalfa.

It Is a Crop That Is Widely Adapted

The Illinois Station reports Brome is adapted in that state from north to south. It has given good results in Kentucky, Iowa, Nebraska, Indiana, Minnesota, Wisconsin, Michigan are great Brome states, and a lot is grown in Canada. We consider it adapted throughout the eastern U. S. and in farther western states.

As to soils, it prefers loam land although it has given good results on sandy soils if not too low in fertility. Well drained muck land will grow Brome if they get an application of some phosphate and potash. Brome is moderately resistant to Alkali. We do not recommend it for wet land but it will stand overflow that only stays on a few days. It will also stand a lot of silting and come up through quite a heavy deposit of silt if the Brome is well started at that time. You will find it a fine grass to use in terrace outlets and grassed waterways because it has a dense spreading root system.

Other Valuable Features of Brome

It starts growing early in the spring. It yields more than most any other grass. You can graze it heavily but if you have an excess of growth, just let it stand. It will retain its palatability and feeding value and your stock will eat it later. This grass is substantially higher in protein than Timothy. It outyields Blue Grass and Orchard Grass. Brome is chiefly used for pasture but it also makes good hay. You can combine the seed crop and still have the leaf growth by setting the combine high or by stripping the seed.

How to Get Started with Brome

The seed is light and coarse. It is difficult to feed through a drill unless it has good agitators in it. A good plan is to sow it with about 1½ bu. of oats or with some cracked corn to keep the seed flowing through the spouts. Your seed bed should be fine and firm. Discing is often preferable to plowing. Then harrow and if possible roll with a cultipacker. Then drill in seed but be careful not to cover over ½ to ¾ of an inch. You can sow broadcast and harrow but you do not get such a uniform covering. We advise rolling again after seeding. Use 20 lbs. per acre if you sow it alone. When mixed with alfalfa there is quite a difference of opinion. The 30-70 combination we list below is good. Some use more, some less. While we have this combination, you can buy any alfalfa you like and seed in proportion to meet your own ideas.

Seedlings can be made either spring or fall. You can use a light seeding of oats but avoid a heavy crop. Often it is a good idea to cut oats for hay while in dough stage, especially if weather turns very hot. Fairly early spring seedings are best. You can sow in fall up to about mid-September under most conditions. The seed will germinate quite rapidly if properly sown and moisture conditions are favorable. However the plants grow slowly so do not expect a crop until the second year.

Getting the Best Results

We strongly recommend sowing Alfalfa with Brome. This grass uses a lot of nitrogen. The alfalfa supplies that and therefore the yields are much greater when grown together. The Brome reduces the danger of bloat on Alfalfa. Such a pasture combination should not be pastured too close to the ground otherwise, the alfalfa will be injured. Keep a growth of 4 to 5 inches and you will get the biggest production. Or, if you can change pastures about, that is even a better practice. If you want to cut the Alfalfa-Brome mixture for hay, cut it when the Alfalfa is in proper condition. The second growth will be principally Alfalfa.

The Brome will eventually take over the field as the Alfalfa dies out, providing you let it stand quite a few years. Then if you want to keep Brome at top production apply some nitrogen fertilizer. That of course will help any grass pasture but is especially good for Brome.

Brome Grass will produce from 200 to 700 pounds of seed per acre which can be an extra source of cash income. For seed, cut when all green color is out of lower seed branches. You can cut with a binder and stack in small shocks. If you combine and the seed is not thoroughly dry, be sure to spread the seed on a floor about 5 or 6 inches deep and turn to prevent heating. The great value of Brome is the large amount of beef or mutton that you can produce on it when used as a pasture.

Be sure to write us if you have mislaid our Pink Price List

ALFALFA and BROME a Great Combination

As explained above, Brome Grass likes lots of Nitrogen. The cheapest and best way to provide that is to sow Alfalfa and Brome together. The Alfalfa supplies the nitrogen and at the same time increases the yield, and raises the feeding value of the crop. They are well adapted to growing together and provide a great drought resisting, palatable, perennial crop that can be used for either hay or pasture.

We should all pay more attention to our pastures because they can help us make a lot more money. Dairy cows, sheep and beef cattle will all bring greater profits when a good pasture is available. We know of nothing better than Brome and Alfalfa providing of course your land is adapted to Alfalfa. You can cut grain and food concentrate costs when you have such a pasture on your farm.

70% New Strain Brome—30% Alfalfa

New Strain Brome (Fisher, Lincoln or Achenbach) is very scarce this year. We are trying to make this limited supply go as far as possible. On the next page you will find it in a mixture with Mountain Brome. This is the only place we offer straight New Strain. Therefore, if you want only New Strain Brome, order this seeding.

We ship the Brome and Alfalfa separately as it does not stay mixed in proper proportions in transit. Furthermore, it generally works better to sow them separately as the Brome does not work through a drill too easily. We use the Fallow Corn Belt Alfalfa in this combination. The percentage of Brome and Alfalfa is good if you wish Brome to predominate. You may like it in a different proportion. You may prefer the Northern or Mixed Brome as offered on next page or some other Alfalfa. We shall be glad to supply you with anything you want. You'll save money on any combination. Let us emphasize again that if you want straight New Strain Brome you must order it in combination with some variety of Alfalfa seed.

Brome and Alfalfa Make Big Yields

Dear Sir:
I have always been very well satisfied with your seeds. This year I harvested 30 tons of alfalfa and Brome grass off of 7 acres. Your prompt service has been greatly appreciated.
Sincerely,
Merle L. Schrader.

Burlington, Wis.

Gentlemen:

For many years my Father purchased from your Company. All of the seed used on his farm. He was so well pleased with your service and the price that he recommended I continue buying from you after I took over the operation of the farm. I have found that your seed is as good or better than advertised in your catalog. Very truly yours,
Stanley F. Scheering.

Hamilton, Ohio

NORTHERN BROME

Item No. 136 on Price List

Most of the acreage sown to Smooth Brome Grass (*Bromus Inermis*) will be northern domestic or Canadian grown. This is the kind that has been grown for years throughout the United States, wherever Brome Grass is grown. It is a highly productive, palatable grass of high feeding value. It is very resistant to drought and cold. Leaves retain their green color even after seed is ripe. Adapted to a wide range of soils from sands to peats although we do not recommend it for wet land.

This Northern Brome may not grow as tall as the Southern or New Strain. That is considered a desirable thing by many who grow it in combination with Alfalfa. It does not tend to crowd out the Alfalfa so quickly. Therefore, the land keeps up its nitrogen supply better. Brome needs lots of Nitrogen. Therefore, stands of Northern Brome with Alfalfa can be expected to last longer and in the long run produce more than southern seed.

We quote the Canadian No. 1 on our Northern Brome and ship that or an equal quality of Northern U. S. grown seed on orders. This seed is all reclaimed stock. Shipment guaranteed to please you. All Brome Grass seed is short. We have fairly adequate stocks of Northern Brome and our prices on it are certainly low considering markets and quality. Please order early as late comers may be disappointed.

NEW STRAIN and MOUNTAIN BROME

See Item No. 139 on Price List

There are different strains of Brome Grass. The New Strains of Southern Brome are Lincoln, Fisher and Achenbach. It is difficult to distinguish between them so we group them under the term, New Strain. These grow somewhat taller than Northern Brome and may yield more, especially if sown alone and well fertilized. They supposedly stand hot weather a little better.

This past year however, had very unfavorable conditions for seed production in the southern area. As a result this seed is very scarce and high in price. In order to stretch supplies as far as possible, and at the same time reduce seeding costs we are selling this mixture of approximately 60% New Strain Brome, and 40% Mountain Brome.

The Mountain Brome is shorter lived than Smooth Brome but it grows faster. Therefore, the two should go well together. One to make the fast early growth, the other the more permanent seeding. Sow 20 to 25 lbs. per acre.

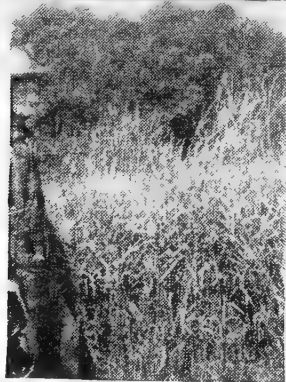

You can sow Alfalfa with this seeding too. It should give the Alfalfa more space for development as the Mountain Brome probably won't be as permanent as New Strain which is slower in getting established though.

MOUNTAIN BROME

Item No. 138 on Price List

This variety is not as long lasting as *Bromus inermis* but it is a faster growing variety under many conditions. A Government publication states that the rapid growth, the vigor of the seedlings and well-branched, deeply penetrating root system are outstanding characteristics of Mountain Brome. It is a native to the Rocky Mountain region. Experiments with it under corn belt conditions are not extensive. We do not know how long it will live here but being a fast growing grass it should do well where such growth is wanted. It also should serve well in combination with other Brome as described in opposite column. In the west it is exclusively used in combination with Alfalfa and Sweet Clover. Sow alone at 20 lbs. to the acre, or mix with Alfalfa or any grass seed in such proportion as you may desire. Supply limited, so order early if you want to try it.

Reed CANARY GRASS

A Remarkable Permanent Grass of Very Great Value An Astonishing Grower

This is a grass you can grow on exceedingly wet land and it is also a great drought resister. In one of the driest years we had in Iowa, Reed Canary grass stood out like an oasis in a desert. It yielded 3 tons per acre when it was so dry Sudan only made half a crop. Produces 2 to 3 cuttings per year. It is a great crop for waterways. It is good for hay or pasture.

Grows 5 to 6 ft. High

It is a very leafy grass. You almost have to see it to appreciate it. Yields up to 3 to 5 tons of cured hay per acre in two cuttings. Second crop is leafier but not quite as tall. Tests shows 9.43% protein in first crop; 11.76 in second. A seeding lasts many years. Starts growing early in the spring and stays on the job until in the fall. Makes a strong sod. On land so wet cattle would bog down in it, Reed Canary grass made a sod so strong it would support a team and wagon. Its long life is indicated by a field in Minnesota that was used for hay crops for 15 years and then 18 years as a pasture. It is not a pest and can easily be eradicated by cultivation.

While Reed Canary seed is rather hard to save there is real money in a good seed crop. With yields of 100 to 400 lbs. per acre you can get a big extra income. You can harvest the seed and then still immediately after that get a good hay crop or a lot of pasture. This is a real money making crop.

Be sure to write for our Circular on Reed Canary Grass that tells how to grow it.

Best Crops Ever Grown—Likes Berry Seed

Skiatook, Okla.

Dear Sir:

I was very pleased with the seed I bought from you. It's more than satisfactory and has given me some of the best crops I have ever grown.

Yours truly, Eugene Morgan.

on

Price List

Widely Adapted

You may ask, "Can I grow Reed Canary Grass?" It is adapted from the Atlantic to the Pacific in the entire northern half of the United States and as far south as eastern Tennessee. Fall seeding is perhaps best in southern states. Frank Litchke of near Enid, Oklahoma, sowed Reed Canary grass in the fall. It has grown continually winter and summer for a long period of years. He grazed 20 head of Hereford cattle on 4 acres for 60 days continually and there was still plenty left. He also reported it made good hay and checked soil erosion very effectively.

Gordon Arbischer of Chilton, Wis., says he gets 1 to 3 loads per acre per cutting. Ordinarily 4 tons per acre in two cuttings. Seed yields range up to 450 lbs. per acre. Some of the land he has it on is subject to overflow for as long as 6 months. The stand has been kept for years.

You can get hay and seed and pasture all in one year. First a seed crop which grows on tall stems. Then the leaves can be cut for hay and there will be plenty of growth for pasture and often a second hay crop. It will change worthless wet land to valuable acres. Sow around 8 pounds per acre on a firm seed bed.

Good Seed Very Scarce

There was a fair supply of Reed Canary Grass harvested but most of it is of low germination. This grass never tests as high as most grasses. We are selling fine seed of normal germination. It is to your interest to order early while we have these stocks available. Small lots, Postpaid: 1 lb., \$5e; 5 lbs., \$3.50; 10 lbs., \$6.50.

Berry's Seeds Can't Be Beat for Germination

Dear Sirs:

La Salle, Colo.

I have been buying my seed from Berry's for a number of years, and find that for germination, your seed can't be beat. I will buy all my seed from Berry's this year.

Sincerely yours, A. F. Brantner.

IOWA GROWN TIMOTHY

THE GRASS THAT IS MOST CERTAIN TO MAKE A STAND

Supplies of Timothy Short This Year

This past season was very unfavorable for the production of Timothy seed. Supplies are the shortest since the drought year of 1934. Many other grass seed stocks are far below normal. Therefore, while Timothy seed is considerably higher priced than normal it is still one of the most economical grasses to sow. Ten to twelve pounds sows an acre. It is adapted to a wide range of soils. You will find it one of the surest grasses to make a stand.

We want to call your attention to the advantage of using Timothy in combination with Clovers. It keeps the Clover growing erect and saves more of the crop. The Clover feeds nitrogen to the Timothy so that it makes a better growth and has a higher feeding value. There is also economy in using our "Ready Made" mixtures. See pages 19, 21, 24. We can buy considerable quantities of Clover and Timothy seed grown mixed, at special discounts. You benefit by those savings and get highly satisfactory seedings.

Some Important Points on Timothy

Years ago a number of tests were made on Timothy as compared with ten other grasses. Over an average of a 16 year period Timothy outyielded all other grasses. A yield of 5309 pounds to the acre, the next nearest grass 1000 pounds less and some yielding as low as 2464 pounds per acre. Timothy can be sown either in the spring or in the fall. Spring seedings use 10 pounds to the acre; for fall seedings five pounds is enough. Timothy combines admirably with Red Clover and Alsike Clover. When you combine Timothy with clover you get a bigger yield than sowing either of them separately. You will get the best quality of Timothy hay by cutting it when the plants are beginning to head. You will get the biggest yields if you cut it when the seed heads are straw colored, before they are ripe.

Like any other grass Timothy will respond to fertilizer applications and will greatly increase its yield on good land.

Berry's Prices Save You Money on Timothy

The price level on Timothy seed is higher this year, as explained in the opposite column. On a comparative quality basis you will find Berry's prices consistently lower than the average. This is due in part to our policy of direct-to-you sales. That makes savings in every department.

We are at the door of the World's Largest Timothy seed producing section. We therefore, have direct personal buying connections. Transportation charges are lower. The cleaning machinery we have is designed to handle the crop efficiently. Our supplies of seed this year are very much smaller than last year. Your order however, will have careful attention. All early buyers can be assured of getting their orders shipped complete. We expect to have supplies throughout the season. Later purchases will probably be at higher levels. We strongly urge you to order promptly.

World Brand Grade—No. 97 on Price List

This is our Extra Fancy Quality. It is a grade that most critical customers have been demanding and using for many years. It will run around 99½ purity and high germination. The seed is bright, plump and there is no seed that could give you better assurance of satisfactory results. We guarantee satisfaction. Our direct-to-you price gives you a big saving.

Dealer's Fancy Timothy—No. 96 on Price List

This Very Fancy Grade of seed is frequently sold as the best quality by others. It is also thoroughly re-cleaned, nice bright seed with good growing power. It gives really high quality at a still greater saving.

Planet Brand Timothy—No. 95 on Price List

This is a good average quality of Iowa grown Timothy seed. It is very serviceable, a little lighter in weight than World Brand; and not quite so bright. It is well re-cleaned and tested. It cuts seeding costs and gives satisfactory results.

Small Lots, World Brand, Postpaid: 1 lb. 45c; 5 lbs., \$1.75; 10 lbs. \$3.25.

KENTUCKY BLUE GRASS

Fine Quality—Reasonable Cost

Unfavorable weather cut the Blue Grass seed crop again this year. Our prices however, are only two thirds of what they were two years ago when the seed crop was also short. We happened to be located in one of the few sections that had a good seed crop so that we can offer it to very good advantage. This long lived perennial grass is outstanding for pasture and lawn purposes throughout a large part of our country. It is very nutritious and very palatable. It makes a fine sod and stands close grazing. It may become dormant during extended dry spells but starts up very readily with a little moisture. Sow Blue Grass alone or use it mixed with Ladino Clover. You will get best results from Kentucky Blue Grass by not over grazing it, when it is extremely dry. Using Timothy or Red Clover, some like Birdsfoot Trefoil. It helps Top with Blue Grass is sometimes spring seeding make to make the seed go farther. For spring seeding make sure you have a well settled seed bed, cover it lightly but not deep. Roll after seeding if possible, it is ok to use a nurse crop. Sow 20 pounds per acre if you sow straight Blue Grass. For lawns, if a very thick stand is desirable then one pound to every 500 square feet is suggested. A commercial fertilizer will help you have more beautiful lawns. A little lime often makes a much more luxurious growth and a better color. See page 51 for Special Lawn Grass Mixtures.

Price Small Lots Postpaid: 1 lb., \$1.00; 5 lbs., \$4.25; 10 lbs., \$7.75. See Item No. 125 on Price List for Quotations.

Good grass land will raise a lot of beef and pork. Use good seed and fertilize for best yields and highest feed value.

ORCHARD GRASS

Fine for Shady Places Starts Growing Very Early in the Spring

This grass is grown in nearly every state in the Union. We recommend it especially for the area east of the Missouri River and perhaps north of the extreme southern states like Alabama and Georgia. Its ability to grow in the shade of trees gives it the name of Orchard Grass. However, it is not by any means confined to shady areas. It is one of the earliest grasses to start in the spring and grows very late in the season. The soil requirements are about the same as Timothy. It has some tendency to grow in bunches, that depends however, upon thickness of the stand. When used in combination with other grasses and clovers it is especially valuable for pasture purposes. If you use it for hay it will make the best quality hay if cut about the time it is in bloom. This grass is especially popular in Europe where it is valued very highly. We believe a great many of our customers would like this crop very much if they really understood its character and what it could do for them. Get some of this seed this year and try it out. The seed that we have for you at this time is a very nice quality. We guarantee shipment to show up to your entire satisfaction. See page 19 for Special Mixture Including Orchard Grass and Ladino Clover.

Price Small quantities postpaid: 1 lb., 55c; 5 lbs., \$2.25; 10 lbs., \$4.25. See Item No. 142 on Price List for Quotations.

Had Real Success with Berry's Seeds

Dear Sir:
I have been ordering my seeds from you for a number of years and like them better than any I have ever tried. I have had real success.
Sincerely yours,
Barney Meade

St. Paul, Va.

Honest and Reliable in Every Way

Dear Friends:
I have found your Company to be an honest and reliable one in every way. I'm well satisfied with your dealings.
Yours truly,
Arthur A. Anderson

Windom, Kans.

FOR HEAVIER YIELDS AND HIGHER FEEDING VALUES

TIMOTHY and ALSIKE **REGULAR GRADE**

See Item 80 on Price List

An Economical and Highly Satisfactory Seeding
It Contains About 20% Alsike

This is a great natural Mixture. Timothy and Alsike are exceptionally well adapted to growing together. Both are very Winter Hardy, and mature at about the same time. Alsike is a perennial clover and one of the hardiest. It will also grow on soil too wet for other clovers. Timothy and Alsike have about the same climatic requirements. Timothy supports the clover enabling it to grow erect and therefore taller and more leafy. The Alsike forms a dense mat of clover in amongst the Timothy. That stimulates the growth of the Timothy and increases its feeding value. Thus both will do better if they are grown in a mixture, instead of being grown separately.

Alsike Clover makes a finer quality hay than Red Clover. It is less dusty. Pound for pound it has a higher feeding value. It is often easier to start because it does not require so much lime. The seeds of Alsike are quite small. The mixture of 20% Alsike will give you about as many clover seeds as a 40% mixture of Red Clover. When you sow this mixture at 8 pounds to the acre you will have around 25 Alsike seeds per square foot. That is plenty to give you an excellent stand. At 10 lbs. per acre you would run over 30 Alsike seeds per square foot. It would take about a 50% Red Clover mixture to give you as many Clover seeds. You will find the Alsike a good Clover for pasturing. It helps to check soil erosion. It builds up soil. This Mixture is very popular with our trade because of the satisfaction that it gives.

In small quantities postpaid: 1 lb., 50c; 5 lbs., \$2.25; 10 lbs., \$4.00.

Timothy, Alsike and Ladino

See Item 81 on Price List

Experiment stations, farm papers, etc., have been telling about the wonderful results obtained by using Ladino Clover in mixtures. You will find this great clover described on page 28 of the book. The demand for this clover has become so great that we have enriched two of our best selling combinations with it. The Marvelous Mixture on page 21 now has Ladino Clover in every pound of it. You can now buy our famous Timothy and Alsike Mixture either without (see above) or with Ladino.

Although Ladino seed is quite expensive, the seeds are very small and a little goes a long way. This costs around 50c per acre more to sow. We believe it will prove to be worth many times the extra cost in results. This makes a wonderful pasture. It is also great for hay. This still remains about a 20% Mixture, but you get a lot more Clover seed per pound. You can grow this on any soil adapted to Alsike and Timothy. Be sure to specify **Timothy Alsike and Ladino** if you want this great combination.

Special Ladino Mixture

See Item 91 on Price List

Ladino Clover is sown alone when wanted for seed production. Straight stands are also desirable for some kinds of pasture. The bulk of Ladino is sown in mixtures with other grasses and clovers. You may have read about some of these special mixtures. We can supply you with seeds separately so you can make most any kind of a combination you want. It is not possible to make up mixtures to order during our winter and spring season.

In this "Special Ladino Mixture" we have prepared a combination that is reasonable in cost and very satisfactory in performance. This contains about 20% Ladino and Alsike Clover combined, 30% each Orchard Grass and Timothy, and about 20% Mountain Brome Grass. You get in this a seeding adapted to quite a wide range of soils and conditions. It should make you a wonderful pasture. Such a seeding should last for several years. We suggest sowing 12 to 15 lbs. per acre. This is a dandy value. Shipment guaranteed satisfactory.

Lowest Possible Prices on Finest Quality

Dear Sirs:
I have found that I can get the finest quality seed at the lowest possible prices from Berry's. I am always well satisfied.

Yours truly,

Newark, Mo.

Harry Nelson.

TIMOTHY and RED CLOVER **HALF and HALF**

See Item 86 on Price List

This is the choice of many thrifty farmers. It is very popular seeding. You get lots of clovers at a very reasonable seeding cost. It stretches your seed dollars, yet gives wonderful results. When you sow this at 8 pounds per acre you get 28 to 30 clover seeds per square foot, at 6 pounds 21 to 22. Then you have the Timothy in addition. That supports the clover, saves the leaves and enables the clover to make its fullest growth. The clovers in turn feed Nitrogen to the Timothy. That improves the feeding value of the grass. It will test higher in protein and grows taller. All of our Clover and Grass Mixtures work in this way. The heavier the clover content the greater the benefits. This 50-50 Mixture can yield practically as much clover hay as a straight clover seeding. The total yield of hay is often more from the mixed seeding.

We are often able to secure considerable quantities of seed that was grown mixed. This is available at discounts under markets. We use such lots together with other seed to make smooth uniform grades. All these mixtures have been carefully cleaned. Every shipment guaranteed to please you.

SUPER GRADE Around 25% Clover

See Item 85 on Price List

For many years we sold only the Regular Grade of Red Clover and Timothy as listed below. It was a standard seeding that gave good results. We later put out this richer mixture and it has been a big favorite. While it has only half the clover content of the Half and Half it is still a fine seeding. At 8 pounds per acre you will get around 15 clover seeds per square foot. You know it doesn't take many clover plants per square foot to make a good stand and a big yield.

There is another factor that makes these mixed seedings so good. They will generally check soil erosion better than straight clover seedings. It forms a denser root system. Therefore they not only enrich the land with nitrogen, but they hold the soil you have. They are fine for hay or pasture and will add a lot of humus to the soil when plowed under. The lower seeding cost is also a thing that appeals to thrifty farmers. You will find our prices will save you big money at all times.

Be sure to write us for our Pink Price List if you happen to mislay your copy or do not have a recent one.

REGULAR GRADE Around 15% Clover

See Item 82 on Price List

This is an old standard seeding. It is of the same high quality as the other two grades described above. Contains around a third as much clover as our Half and Half. A seeding rate of 8 to 10 lbs. per acre will give you 10 to 12 Red Clover seeds per square foot. You can get a surprisingly heavy stand of clover from the seeding. Seeding cost is of course still lower. The kind of mixture to select depends upon your own likes and the purpose for which you want the seeding. If it is primarily for soil control this regular grade is excellent. For pasture some do not like too much clover. You get a very liberal measure of fine seed value in this Regular Grade of Red Clover and Timothy.

Timothy, Red and Alsike Clover **REGULAR GRADE**

See Item 87 on Price List

Contains about 20% Red and Alsike Clovers. Since Alsike seeds are smaller you get more clover seeds per pound. At 10 lbs. per acre it will average 20 to 25 clover seeds per square foot. We have a similar lot with 50% Clovers, Lot Just Rite on page 24. This Regular Grade is much more economical to sow and it gives excellent satisfaction to our trade. Alsike will stand more acid soil than Red and will do better on wet spots, so together they make a fine combination.

Can Sow Our Seed with Confidence

Dear Sirs:
I have a farm of only 120 acres and it is very essential that I have good crops of clovers each year for the cattle, sheep and hogs that I feed and raise. I have found in the last 8 or 9 years that I can sow your seeds with confidence.

Yours sincerely, Artie E. Stuart.

SPECIAL MIXTURES FOR SPECIAL NEEDS

BERRYS MASTER MIXTURE

A COMBINATION OF DIFFERENT GRASSES WITHOUT ANY CLOVERS

A Many-Purpose Grass Seeding

Every year farmers are learning more about using grasses. Articles in farm papers and demonstrations of pastures and meadows are showing how profitable grasses can be. The value of grass in soil erosion work is now more thoroughly appreciated than ever before. We are all becoming conscious of farms going down the river, and we can stop most of that with grasses. We would not attempt to go into the matter of soil erosion controls. Most everyone realizes that waterways should be seeded down. This Master Mixture serves that purpose and in addition it is a great mixture for pasture, as well as for meadows. It is a mixture of grasses only, without clover. Many need such a mixture and want no clovers, others have clovers of their own to add to grasses. This Master Mixture is seeding that gives very satisfactory results and yet is economical to use.

Making Pastures Pay

A lot more food can be produced in this country if the pastures are improved. The quality and quantity both can be improved by following good pasture practices. Your State Experiment Station can probably give you Bulletins for your particular area. You can improve old pastures by disking, harrowing and reseeded. The use of fertilizers will pay in practically every instance. The most common things needed are lime and phosphates. 1 or 2 tons of ground limestone and up to 600 pounds of 20% Super Phosphate are a big help. 150 pounds of Murial of Potash, and in some cases Nitrates are helpful. If you have well rotted manure it is about as good as you can use. Plan to seed with a good grass combination like this Master Mixture or some of the other mixtures listed in our Catalog. Be sure your seed bed is well prepared. Do not cover the seed deeply. Roll the ground if possible after seeding. If there is quite a little Blue Grass on your land, 10 to 12 pounds of this mixture is good, otherwise 18 to 25 pounds for a new seeding. You can produce a lot of beef on nothing but pasture if you will make your pastures good.

\$35.00
100 LBS.

Grasses Used in Master Mixture

This Mixture contains eight grasses. The Kentucky Blue Grass which is well known for its fine feeding value and excellent adaptability for pasture purposes. It is a long lived perennial. The quick growing Mountain Brome is high in feeding value and a grass that roots deeply. The Alta Rescue (Kentucky 31 Type) is a very productive grass and is in big demand. The Reed Canary Grass is heavily productive and adapted to stand both dry and wet conditions. Red Top is a fast growing perennial that grows on most any kind of land. It takes hold on spots of poor soil. The Meadow Fescue or English Blue Grass will do well on many soils and is especially good on moist land. These crops are all described in this book.

When you plant a variety of grasses like this, livestock like it better. They appreciate a variety. There are other advantages in sowing this mixture. All of them are perennials and will last a good many years from one seeding. Some of them start extremely early in the spring. Some of them will stand drouth better than others. You have here grasses that will stand both wet and drouth, and that are suitable for a wide range of soil. You can use this for waterway seeding, on terraces or in any regular pasture combination. You can also get a good hay crop from this seeding but it is more widely used for pasture.

Liberal Savings Guaranteed

We use good seed and mix it as thoroughly as we can according to a definite formula. We will gladly send you a sample of this Mixture so that you can see just how it runs. If you do not consider the shipment a great value when you receive it, you may return it for a refund, plus freight. We believe that this is a seeding which will please you, because it is so widely adapted. You can use with a nurse crop. Sow it in the spring or it is okay for fall seeding also. Price 100 lbs. \$35.00; 50 lbs. \$17.60; 25 lbs. \$8.80.

Berry's THRIFTY MIXTURE

Mixed Grasses and Clovers

This is a combination of grasses and clovers that has given our customers very satisfactory results. The seeding cost is low. It only requires 15 to 20 pounds to the acre. A seeding lasts several years. It produces a fine quality and a wide variety of feed. By using this combination you can get a longer pasture season. Some of the crops in it start early, others grow through hot weather and late into the fall. Some stand wet conditions, others can take a lot of drouth. Under almost any conditions it can give you a stand. It is highly productive and of excellent value. This mixture contains half grasses and half clover. The grasses in the mixture are Kentucky Blue Grass, Mountain Brome, English Blue Grass, Red Top and Timothy. These are combined with Korean Lespedeza and Sweet Clover. The Mountain Brome Grass is a faster grower than other Brome. You should like this feature especially in this combination. Red Top also comes quite rapidly. It is a fast grower making these two provide early feed. The Korean Clover and Sweet Clover are generally ready to pasture by mid-summer and on until late fall. The Timothy and the Blue Grass also add to the fall pasture. All of these grasses are perennials excepting Rye Grass. The Korean Clover is an annual, but it generally reseeds itself unless the season is too short. Sweet Clover is a two year crop and it, too, nearly always reseeds when used as a pasture. Thus the legumes afford you high protein feed. It will build up your land and increase the value of the grasses that grow with it. This mixture gives you a lot of feed value at a very reasonable cost. Price 100 lbs. \$22.00; 50 lbs., \$11.10; 25 lbs., \$5.60.

Husband and Wife Are Well Pleased

Dear Sir:
I would like to say that I have bought seed from you for the past 15 years. It has been very satisfactory and I have always been pleased with the way you handled my orders. Also, my wife continues to buy her garden seed from you year after year.

Dexter, Minn.

A satisfied customer,
Harry Skov.

Berry's GROW-QUICK MIXTURE

Berry's Grow-Quick Mixture

Contains Mountain Brome Grass, Domestic Rye Grass, Timothy, Korean Clover and Sweet Clover.

Approximately 50% Clover Balance Grasses

You can get a very low seeding cost by using our Grow-Quick Mixture. This is one of our biggest selling combinations. You can get good quality seed at a very reasonable cost. You can begin pasturing this mixture quite early. The Rye Grass in it is a fast grower and affords the earliest feed. The Mountain Brome is also quite a rapid grower. As the summer progresses, the Sweet Clover and Korean come on and that tends to increase the carrying capacity while the Timothy, of course, comes along toward the fall. The Korean Clover will reseed for next year unless the season is too short. As the Sweet Clover and Timothy live over winter they can be used next year for plowing under for fertilizer, or continued for pasture, or cut for hay. Sow 15 to 20 lbs. per acre. That makes a low cost for any seeding containing 50% Legumes. If you are going to be short on pasture and want something you can start pasturing quite early, we recommend this as a good selection.

You can sow this combination about the same time you would sow small grain. We do not especially recommend a nurse crop. If you want to sow some oats with it that is ok. Pasture the oats along with the Rye Grass and Brome while the Korean Clover and Sweet Clover are getting started. We would not advise, however, over a bushel of oats to the acre. Price 100 lbs., \$18.00; 50 lbs., \$9.10; 25 lbs., \$4.60.

\$18.00
100 LBS.

Has Found Us Reliable and Fair

Gentlemen:
I have been buying all my field seeds from Berry's for several years. The seed has always been very satisfactory as to quality and price. Also, I have found you to be reliable and fair in all dealings.

Harrison, Ark.

Very truly yours,
E. C. Hathcoat.

SEE SAMPLE ENCLOSED

The Most Popular Clover and Grass Seed Mixture

Now Better Than Ever Before

ECONOMICAL AND VERY SATISFACTORY

Look at this great value. See the quality of our heaviest yielding mixture. For years it has been our biggest seller. Now we have added that tremendously popular expensive Ladino Clover. Enough to give you around 15 seeds per square yard. A Ladino plant covers a lot of ground. You get a total of 50% of rich hardy heavy yielding clovers. Red, Alsike, Sweet and Alfalfa. The Timothy and Ladino are in addition. This averages 40 to 50 clover seeds per square foot when sown at 11 pounds per acre. You can sow less seed and get a good stand. It is a marvelous value. You can really stretch your seed dollars over more acres and get a fine seeding. The added Ladino is wonderful for pasture or hay.

A SEEDING THAT LASTS SEVERAL YEARS

Such a combination of clovers and grasses makes extremely heavy yields of hay. Our customers report highly satisfactory results. Big crops. Fine quality and big savings in cost. Many use it. The Alfalfa seed in the mixture helps to establish the crop on your land. The Sweet Clover opens up the soil and adds much nitrogen. The Red Clover and Alsike fill the lower growth and the Timothy supports them and adds to the weight and growth of all. It is a great seeding and it is no wonder our customers are enthusiastic about it. Year after year this is our biggest selling mixture. See Item 90 on Price List for quotation.

Berry's Famous 4 WAY MIXTURE

Item No. 88 on Price List

Contains Red Clover, Alfalfa, Alsike and Timothy

It Contains About 30% Legumes

From the standpoint of sales this Mixture gives the Marvelous Mixture described above a close race. It contains Red Clover, Alsike and Alfalfa, a generous measure mixed with Timothy to form a splendid seeding. This does not contain Sweet Clover. There are ample clovers in this seeding to produce a good legume stand. It is an excellent way to see how Alfalfa will do on your land. Many seedings of pure Alfalfa have been established after getting started with this Four Way combination. A seeding 10 lbs. to the acre should average around 30 Clover and Alfalfa seeds per square foot. If you sow 8 lbs. there would be 25 Clovers and Alfalfas per square foot. This

seed is all hardy home grown. It is all recleaned seed, and carefully mixed. It comes to you ready to sow.

You will find that it makes fine hay, and is very good for pasture. It will build up your land. It will check the washing of your soil. A seeding lasts for several years. The cost is very low. Only around \$2.00 per acre. That is really a low price this year for such a fine Four Way combination. No farmer can afford to neglect grass and clover seedings, when you can get such a good combination at such a low cost. With these three different legumes you are almost certain to get a stand of clovers. It is all recleaned seed. We guarantee shipment to satisfy you, in every respect. See page 5. See Item 88 on Price List for Prices.

Most customers who buy our mixtures use them as they come, and they are prepared to give very satisfactory results just that way. Others like to use them as a basis for some special mixture that they may have in mind. They might add Brome grass or Red Top, Orchard Grass or even other clovers. We do wish to emphasize however, that the mixtures as they come produce results that are highly satisfactory to the grower.

QUALITY GUARANTEED TO PLEASE

See enclosed sample. Note the heavy clover content, all hardy home grown seed. Thousands of satisfied customers praise Marvelous Mixture "Never had a finer stand. Saved about half in buying this." "Have been using it several years with the best stands and yields of any seed used." "Got 21 loads off 9 acres first cutting and 11 loads of Alfalfa second cutting." "Have used Marvelous Mixture for 8 years and never been disappointed." Your money back if you do not consider it a great value on which you have made a big savings. See page 5 for guarantee on all seed.

START THIS PROFIT MAKER

You too can become enthused over its wonderful production and high feeding values. See how it checks soil erosion and enriches your land. That dense heavy mat of clovers is a joy to behold. We sell thousands of bushels of Marvelous Mixture every year and with present low prices on such a combination of all home grown seed its sales should smash all previous records. We will protect prices until seed is sold or market advances make duplication impossible. See Item 90 on Price List.

You will find other clover and grass combinations on pages 19 and 20. Lot Leader and Just Rite on page 24 are other very popular seedings. There is no combination however that will give you as much clover for the money as you will obtain in this Marvelous Mixture.

**A Very
Popular
Seeding**

Levasy, Missouri.
Dear Sirs: I have found all your seeds very satisfactory. Your Hybrid Blend Seed Corn can't be beat for production, when the season is unfavorable. Your "Hi-Test" Alfalfa has given excellent results. Everyone commented on my field of Alfalfa.

Yours truly,
Francis A. Gilbert.

Gallipolis Ferry, W. Va.
Dear Sirs: I have been using your seeds for several years and have always found them 100% alright. Your Honest John Alfalfa and your Medium Red Clover can't be beat. That is also true of your garden seeds and strawberry plants.

Yours truly,
Aubrey B. Randolph.

A Beautiful Lot of Hardy Alfalfa!

LOT GOLD

**FINEST NORTHWESTERN GROWN
DAKOTA 12 TYPE**

Item No. 10
on Price List

**SEE
SAMPLE
Enclosed**

99½% PURE

90% GERMINATION

The Famous Yakima Valley Seed

Here is one of those special values that are seldom found. Through a special buying connection we got a few cars of this beautiful seed below prevailing markets. This seed is grown in Washington just a few miles across the line from the northernmost part of Idaho. It has all the characteristics of yield and hardiness of the northern Idaho and Montana seed.

This is such a wonderful value that I am sending you a sample of it. Look at it carefully. See how clean it is. Bright, plump berries. High germination. Free of noxious weed seed. Compare it with others. See how much high quality you get for your money. It is seed that will delight the most critical buyer. This sample will also indicate the quality of our World Brand grade in other lots.

Alfalfa of this kind is often referred to as the Dakota 12 Type. Vigorous growing, hardy productive plants. This seed, in our opinion is adapted to all parts of the nation. If you live in the northern areas or anywhere in the corn-belt you should find this highly satisfactory. Money cannot buy you finer quality. This seed is priced to sell below what others are asking for more southern, less hardier origins. See Item 10 on price list for quotations. This lot can be had treated with Phygon at 50c bu. extra. See page 33.

Order Early for Lowest Prices and Best Values

Lot Gold is outstanding among our Alfalfa values. We guarantee you a saving of \$3.50 to \$6.00 per bushel or your money back. Quality for quality, you will find our prices lowest. Do not, however, defer ordering too long. The supplies may become exhausted, or markets work toward higher levels.

Galva, Illinois.
Dear Sirs: I have been buying seeds from your firm for over 30 years. I believe I have never had cause for complaint on the quality of your seeds or your service.
Sincerely yours,
H. J. Miller.

THE NEW RANGER Wilt Resistant Alfalfa!

**Sow Some of This Alfalfa Next to
Any Other Kind and See Its Superiority**
Item No. 22 on Price List

This is something new in an Alfalfa variety. It was developed by the United States Department of Agriculture in cooperation with the Nebraska Experiment Station. It was developed to be highly resistant against wilt. Wilt is killing Alfalfa stands in a good many sections of the country. Where wilt is present this Ranger Alfalfa is the kind to buy. It is quite a bit higher in price, but it will be well worth it under such conditions. Not only does it withstand wilt, but it is very winter hardy. It is a multiple strain variety; five selections of Cossack, Turkestan and Ladak.
Our seed is State certified. We generally have it in 30 pound bags with state seals attached. If we have to ship in part bags lots, the state tags will not be attached, but it will be the same genuine certified stock. We have only a limited supply, but should be able to take care of all orders. To be safe, buy early.

**BLUE TAG
Certified
Seed**

**Shipped in
15, 30 or 60 lbs.
Sealed Bags.**

There is another new wilt resistant Alfalfa known as Buffalo, developed by Kansas Experiment Station and U.S.D.A. We do not have that available as this Catalog goes to press, but we may have some later on, so if you wish Buffalo Alfalfa, be sure to write us.
Although the seed supply of these varieties is still very short it will pay you to start these if you have wilt in your section. Even if you are not sure about wilt, grow a few acres and see how it compares with your older kinds.

Honest John

**THE LOWEST PRICED ALFALFA THAT
GIVES Wonderful Satisfaction!**

This is our lowest price grade of hardy domestic alfalfa seed. Although it is cheaper in price, it brings us the most letters of praise. Those who judge by results consider it wonderful. If you go by looks of the seed, you will not find it tops. It contains some off colored seed. Some smaller berries. The smaller berries mean more seed per lb. When you sow the same number of lbs. per acre as with other grades, you put more seeds per square foot. That is why it does so well, even though the germination per hundred seeds is somewhat lower. You will find it highly satisfactory in yields and quality. It is exactly the same in hardiness as any of our Corn-belt stock. It should yield as well, and last as long.

**The Cost
Is Low**

**Performance
High
See
Item No. 4
on Price List**

Customers Are Enthused About Honest John

Customers write in and say it produces stands as "thick as hair on a dog's back." Others write that they saw Honest John on their neighbor's field where it produced better stands than they had from seed costing almost twice as much. We handle this serviceable seed for those who want to cut their seeding cost as low as possible. You do not have to sow it any thicker than any other Alfalfa. If you do not object to a lack of uniformity in appearance, so long as it can produce satisfactory results, then this seed should please you. It has pleased thousands. Again this year it will be the selection of thousands of farmers. It is not always possible for us to secure enough of this type of alfalfa to supply the tremendous demand that exists. Therefore we sincerely request that you order as early as you can. It is to your interest to do that. This great value reduces your seeding cost very drastically. You can afford to use it liberally, either in establishing stands of pure alfalfa, or using it with mixtures or other grasses, or clovers.

Remember the real way to judge seed value is to figure the number of sprouts per ounce or pound rather than by the hundred seeds. You don't sow Alfalfa by count but by weight or measure. That is the secret of "Honest" John's success.

Dundee, Minnesota.
Gentlemen: I have been using your seeds on my farm in recent years. I think they are the best seeds I can buy.

Very truly yours,
Melvin Metcalf.

THE BIG HEAVY YIELDING ALFALFA!

Northern Grown DAKOTA 12

This Is One of Our Biggest Selling Alfalfas

These three lots of Alfalfa on this page are all World Brand quality. That means seed of beautiful golden color. The berries are large and plump. It is seed that is very pure. The germination is high. Seed of this character will satisfy the most exacting buyer. See the sample of Lot Gold Alfalfa Seed enclosed. That indicates the quality of all our World Brand Alfalfas and other seeds too. This northern grown Dakota No. 12 Alfalfa is a very heavy yielding type. It is one of the most popular kinds we sell. It grows quite tall. The yields are large. Our seed is northern grown as designated under government regulations. If sold out of domestic seed, we will ship Canadian seed on order at no extra charge. It is produced where there are extremes of heat, drouth and cold. "Dakota 12" indicates a type of Alfalfa adapted to wide variations and climate. It can take a lot of punishment. Many farmers will sow no other kind. They claim it is as hardy as Grimm, and more productive. We consider it adapted anywhere that hardy Alfalfa is needed.

You Can Make Big Savings on Finest Quality

This is a wonderful value in beautiful World Brand quality Northern grown Dakota No. 12 Alfalfa. It is priced to save you from \$3.00 to \$5.00 a bushel. Compare and see that Berry's values are superior. Alfalfa seed production is only about half as much as last year. We strongly advise buying your alfalfa seed early. You can get what you want and at a big extra saving. Seed like this will be very scarce and higher in price later. We have never known this alfalfa to fail to please the farmers who have grown it. Some say it is more resistant to disease than Grimm. We recommend it to our most critical trade.

**SEE
Item No.11
On Enclosed
Price List**

Berry's Finest NORTHERN GRIMM

Popular for Its Fine Quality Hay and Extra Hardiness

The Grimm is in big demand. It has extra winter hardiness and somewhat finer characteristics of growth. Our seed is produced from sections classified as northern, under Government regulations. The seed is not only beautiful in appearance, but produces the kind of crop that many farmers demand. We have other lots of Grimm at lower prices. See page 32 for description. Price list quotes all alfalfa seed between numbers 1 and 25. You will find in them unusually big savings in this year of short seed supplies. Buy early for best selection and lowest prices. We sell different grades and origins of Alfalfa. Pages 30 to 32 list other lots. This World Brand is our very finest quality. If you demand the best specify this grade. It is guaranteed to please you. The price will satisfy the most thrifty buyer. This is domestic seed. If sold, we'll furnish Canadian Grimm at no extra charge.

What Kind of Alfalfa Should I Buy

We are often asked the question whether to buy Grimm or Dakota No. 12 or our regular Corn-Belt Alfalfa. It is a little difficult to answer that question. It depends not only upon the seasonal conditions but soil. In some soils there is more trouble with winter killing than on others. Where you have much probability of winter killing then the Grimm or Cossack would be the best selection. Others prefer Grimm because the growth is generally somewhat finer. Other farmers again demand exactly the opposite. They want larger heavier growth. We can give you what you want and all at prices that are guaranteed to save you money, quality considered. This lot can be had treated with Phygon at 50c bu. extra. See page 33.

**SEE
Item No.16
On Enclosed
Price List**

BEAUTIFUL NORTHERN COSSACK ALFALFA

Cossack Alfalfa is noted for its winter hardiness. It has stamina and vigor. Many consider that it excels the Grimm in this respect. Cossack is one of the varieties that was used in making the new wilt resistant Ranger Alfalfa, described on the opposite page. Its fine leafy growth makes beautiful quality hay. It is very fine to use in combination with grasses, such as Brome, for hay and pasture. A seeding should last for many years. We consider it hardy for any part of the nation. This World Brand grade is beautiful seed. Purity and germination tests are high. Berry's direct-to-you policy makes possible this unusually attractive price. You will save money. We guarantee every shipment to show up to your satisfaction. Please order early. You will get the biggest values by doing so.

The Cossack Alfalfa we have available only in the top World Brand quality. You can know when you sow seed like this that no other seed could possibly give you better assurance of getting satisfactory results. Our Cossack is all northern grown. We have not been able to accumulate as large a stock of this seed as we want but will have a good supply for our early trade.

Price Small Lots Postpaid any of above 3 varieties: 1 lb., 90c; 5 lbs., \$4.00; 10 lbs., \$7.50.
Be sure to inoculate Alfalfa seed with Berry's Nodule Germ. It pays big dividends. See page 27.

Dear Sirs: I have been getting my seeds from you for quite a time. They have been very satisfactory. I think it is a great thing for farmers to get such good seeds at such big savings.

Yours very truly,
Guy T. Evans

OUR BIGGEST SELLING CLOVER VALUE!

LOT LEADER

Medium Red Clover

98%
Pure
INCLUDING SOME
CROP SEED

I am constantly striving to give our customers the kind of seedings and values that will give them the best results for the lowest cost. While farm incomes are on the whole very good, the wise farmer is still watching expenses. The value of Lot Leader lies in its real high quality at a low cost. That is why it is so popular with our trade. By selecting lots of Red Clover seed that have been obtained by our purchasing department to special advantage, we can make the value in Lot Leader outstanding in a very practical way. You will find in this Lot a fine clover mixed seeding at low cost.

Character of Lot Leader

This is made up of quality lots of Red Clover seed. Sometimes we will get in some lots of seed that are beautiful in every way and contain a sprinkle of Alfalfa or Alsike seed or Sweet. Maybe 3 or 4 per cent altogether. When we have such lots they are used in Lot Leader. This year our clover seed has come in mostly bright, plump, clean and high germinating so Lot Leader is practically World Brand quality. With the Timothy as described below you will have a crop purity of fine quality at 98%. Fine beautiful bright seed.

All High Quality Seed

After figuring a discount on the Red Clover I wanted to lower the cost further without hurting quality or yielding ability. Experience has proved to me that a little Timothy in with clover improves rather than hurts yields. In fact quite a large proportion of Timothy can be used. However, in this seeding I decided that by including a very moderate amount a farmer sowing it would get practically the equivalent of a straight clover seeding. There is enough Timothy to act as a supporting crop for the clover. That really helps as the clovers then grow more erect and there is less loss of clover leaves. The quality of the hay is often superior. Also the clover content increases the feeding value of the grass. The timothy content was therefore set at about twenty-five per cent.

Midland RED CLOVER

Certified Idaho or Washington Crown—Blue Tag

A new strain or variety of Medium Red Clover. It is the result of selections made by the Agricultural Experiment Stations of several states and the U.S.D.A. Much work has been done to develop Red Clover adapted to certain sections. Bigger yields and greater disease resistance was wanted. Midland Clover gives you both.

There are a number of things that help make good clover stands and big yields. Seed bed, soil and weather are all vital factors. Yet with all those the same Midland Red Clover is better than ordinary red clover. We consider it superior in three ways. It makes a larger growth. It is resistant to northern Anthracnose disease. We believe it is easier to get a stand of Midland. Under similar conditions it will probably yield more seed per acre.

This clover is highly recommended for the central clover belt. Judging from results in the central area we feel certain it will be better in most sections where Midland Red Clover is grown.

Midland Red Clover is still quite scarce. We offer either Idaho or Washington origin. That is where the seed is increased under most favorable conditions to make the largest crops. The difference in price between it and ordinary Idaho Red Clover is not as large as it has been. It will only cost you about 30c an acre more to sow this New Midland. We urge you to get at least some of it. Sow it side by side with other red clover. Watch it carefully this year and next. See for yourself. Check yields and quality. It is definitely a better clover. Our supplies are not large but we can take care of early orders. Order in even ½ bu. and bushel lots if you demand the State Seal and Tag on each bag.

For Prices See Item No. 36 on Price List Enclosed.
Save price list. If lost we'll gladly send you another.

Cost Only Around \$3.40 Per Acre

Here then is a dandy clover seeding with a little grass, having a high crop purity and very free of weed seed. Seven pounds will sow an acre. It should yield fully equal to a regular straight clover seeding. In fact I am certain it will yield more. The seed is all hardy domestic stock adapted anywhere in the U. S. It makes a thoroughly dependable seeding. I consider this the most outstanding value in clover seedings for the year. Buy it and if you are not completely satisfied let me know. I'll have it returned and promptly refund your money plus freight. This is truly a big extra value. Compare quotations on our price list with any others. We'll gladly send sample on request. Order early for lowest prices.

For best results with clover seedings be sure to inoculate your seed. The cost is low. It is easy to apply. A package that inoculates a bushel of seed costs only 50c; and 2½ bu. size \$1.00. See page 27.

See Item No. 27 on Price List

LOT Just-Rite RED CLOVER

With Alsike and Timothy

A Satisfactory Money Saving Mixture

This is a very economical seeding and a good one. You can use it for hay, pasture and soil erosion control. It builds up fertility. The cost is even lower than Lot Leader. We have sold this for many years. It has proved very satisfactory. Our customers like it. Costs only around \$2.50 per acre.

A bushel will sow 5 to 6 acres. It contains 50% Red and Alsike Clover. Plenty for good stands. When sown at 7 to 8 lbs. per acre you will get 40 to 45 clover seeds per square foot. It is good seed. Hardy home grown re-cleaned seed. Produces excellent clover stands at low seeding cost. The Timothy supports the clover and increases yields.

Big Crops—Fine Quality

Crops of Lot Just-Rite are heavy. The hay is high in feeding value. Contains lots of protein. You put nitrogen in your land with this crop. The humus content of the soil is increased. Helps it absorb more water. Works fine in rotations. With two clovers in it one is almost sure to catch. You practically always get both.

It is the satisfaction customers get from our seed that counts. That is what you want.

Don't compare this with country run or cheap seed. We've tried to make this one of our best values. The best evidence of this is the repeat orders we get for it. We guarantee shipment to please you in every way.

For best results from clover seedings—Inoculate your seed. The inoculating material costs only 1 bu. size 50c; 2½ bu. \$1.00.

Ridott, Illinois.

Gentlemen: I have found your seeds O.K. and you have saved me lots of money. I have had wonderful success with your Honest John and Planet Brand Alfalfa. Also with your Red and Alsike Clover.

I am your 20-year customer,
Thomas Fauver.

Lewis, Indiana.

Dear Sirs: I find your seed very good quality. They are high in germination. I saved \$5.00 a bushel on Red Clover last year. I have a very fine stand. I hope this will help others to try your fine seed as I did.

Yours truly,
Melvin McCullough.

HARDY RED CLOVER

Berry's Famous WORLD BRAND QUALITY

IDAHO

Our Finest Quality in Medium Red Clover

This seed originates in the garden spot of the World for seed production. It comes largely from the Twin Falls and the famous Boise Valley section of Idaho and eastern Oregon. In the big Clover consuming states of the Corn-Belt, farmers pay a big premium for this seed over Central States origin. They know from appearance alone this seed is tops. It is brighter in color, plumper and more purple than our midwestern grown seed. It is produced on selected land by growers who make Red Clover seed production their business.

Climate, soil and water combine to make this section of the United States famous for Red Clover seed production. Yields normally will run 4 to 6 bushels per acre. Again this year Clover seed production was spotted in the Corn-Belt states, but Idaho and eastern Oregon came through with a normal crop. This seed has proven itself over a long period of years to be hardy anywhere. It is grown in mountain valleys, at around 4000 feet elevation. The clear sunshine days and cool nights give it a special color and vigor all its own, unequalled by any other origin.

DIRECT BUYING SAVES YOU MONEY

We buy this seed the same as we sell it, direct from the growers or farmers who produce it. This enables us to really give you a wholesale price on it. This seed is in greatest demand so don't delay ordering.

Purity around 99%, germination 90% and nearly free of all weeds. The impurities usually are a trace of other crop seed such as Alfalfa. Red Clover seed production this year wasn't good. Supplies available are small. The market is strong, so order promptly. See Item No. 34 on Price List.

Wonderful Service—Big Yields

Sirs: Le Sueur, Minn.
I have been well pleased with the seed I bought from you. We have had excellent yields and wish to thank you for your wonderful service.
Very truly yours, Harold C. Budke.

CENTRAL STATES

Our Biggest Selling World Brand Clover
See Sample Enclosed.

One of our principal features this year is to give the nation's best values in Red Clover seed. We guarantee to give you more real value for your money than is obtainable anywhere else. Your money plus freight refunded if you do not find it so.

Look at the sample enclosed. Note the fine, bright color. See how smooth and clean it is. High purity. Strong germination with 90% or better live seeds. You can absolutely depend upon such seed for the best assurance of getting satisfactory stands. It is not quite as brilliant as the Idaho seed but it will do everything that Idaho can do in producing strong vigorous growing healthy stands.

You can spend more money for Medium Red Clover seed but you will not get seed that will do a finer job or that will be better. In order to give our customers the advantage of the very lowest prices possible we are deferring pricing our seed in the catalog. This book has to be prepared six to eight weeks before it is delivered to us. By putting in a separate price list we can print that, a day or two before the catalog is mailed. Be sure to look for this price list and save it. Every price in it is figured down to the lowest possible figure.

This Central States Medium Red Clover is grown in the Central States and is thoroughly adapted to that area. Berry's World Brand is the top quality in that seed. It will please those who demand the best. Remember it must satisfy you in every way or we trade back. Small lots postpaid, 1 lb., 85c; 5 lbs., \$3.50; 10 lbs., \$6.75. See Item No. 32 on Price List for other prices.

Saves 1/3—Gets Heavier Stands

Dear Sir: Fennimore, Wisc.
With some of our seeds, I get heavier stands at a savings of as much as one third less cost.
Sincerely yours, Clarence R. Block.

FANCY GRADE

This is really Fancy Brand and next to our very finest World Brand quality. It is much better in quality than many country dealers will sell for their best. It will run below the 99% purity of our World Brand but often this is due to a trace of crop seed such as Alfalfa or Alsike. Normally it should be around 98% purity and 90% germination. It gives fine results and in appearance alone it would be hard to tell from our World Brand. If price is a factor in your Clover buying don't hesitate to order this as we know the results will be pleasing.

HARDY ORIGIN—ADAPTED ANYWHERE

This seed is from the Central States such as Iowa. Seed grown in this section has proven itself, over a long time, to be hardy and adapted for use anywhere Red Clover is used. This seed, like our World Brand, has been processed over special machinery to remove all weed seeds possible. It is bulked or blended uniformly. Every bushel you get from us will run as nearly alike as we can make it. The savings made possible by our big volume and direct buying and selling are passed on to you. Be sure to order as early as possible. See Item No. 31 on Price List.

CHOICE QUALITY

Thoroughly Recleaned, Tested and Guaranteed
Due to the shortage of Red Clover seed we now carry only three grades. This Choice quality or Planet Brand is good serviceable seed. It is lower in purity than our Fancy Brand described opposite. The germination may be a little lower too, but due to being slightly smaller berried, it contains more seeds in number per pound. In color it may not be so bright but you will find it very uniform in appearance and the results highly satisfactory. Ask to see a sample if in doubt about this quality of seed. Don't let someone tell you a third grade of seed can't mean good quality. Seed of this quality thoroughly recleaned and tested is still of better quality than 90% of the farmer cleaned seed offered.

FINE FOR MIXED SEEDINGS
Lots of farmers like to make up their own mixtures for seeding. This quality makes a fine combination due to its uniformity, hardness, adaptability and price. Seed at a normal rate of 7-8 pounds per acre. Many farmers would be money ahead to order this seed rather than helping a neighbor out with his. We know, and you know what you are getting here. This seed from practical experience has proven itself to thousands. See Item No. 30 on Price List.

Our Special Low Prices
on all clovers are on a wholesale basis.
See Our Latest Price List. Drop us a card if you have mislaid it.
We Will Mail One Promptly.

MAMMOTH RED

The Lowest Priced Red Clover This Year

Mammoth Red Clover seed has for years sold at a premium price over Medium. This year it so happens that weather favored the production of Mammoth and there is a proportionately larger supply. That is why this year the price of Mammoth is so much lower. This is a wonderful opportunity to save money on the finest of Clover seed.

Mammoth matures its seed crop somewhat later than the first cutting of Medium. Most all its blooms form at that time. It does not, as a rule, bloom the second time like Medium. The growth of Mammoth is taller and heavier. Its one big hay crop is extra large. The second growth makes wonderful pasture and is great for plowing under. There usually is not a second hay crop. This Mammoth Clover fits into some farming plans better than Medium. Many like it better in pasture combination because it is longer lived. It isn't often you can buy Mammoth cheaper than Medium. This year you can make big savings in your Red Clover seed bill by ordering Mammoth. Our prices are at wholesale levels.

World Brand

This is top quality Mammoth. The finest hardy northern grown seed. Beautiful color. High purity and germination. See Item 41 on Price List for big money-saving prices.

Planet Brand

A very serviceable and dependable quality of Mammoth. May contain a trace of crop but is capable of producing excellent results on your farm. See Item No. 40 on Price List.

ALSIKE CLOVER

THE CLOVER THAT GROWS UNDER UNFAVORABLE CONDITIONS

Lot ECONOMY

Alsike Clover with Timothy

This is a special lot and a seeding that our trade takes to in a big way. A bushel will sow six or seven acres. A bushel to six acres will average about 60 clover seeds to a square foot. You have the timothy besides, to hold up the Alsike. That helps it to grow taller and cleaner. One crop helps the other and will produce a greater tonnage when grown together than when grown separately. It makes a heavy crop of fine quality hay and pasture. It is very nutritious. Lot Economy will generally contain 50% or more Alsike. This is mixed with Timothy to make a good uniform seeding, and we can sell it at a price that really is a bargain price. Do not confuse this with the average combination of Alsike and Timothy. It is much richer in clovers and requires less seed per acre. It is an economical seeding and it is a good one. A seeding like this should be hardy anywhere in the United States. Adapted to a wide range of soils as well as climatic conditions. You get an extra big measure of value in this Lot Economy. We have sold a seeding like this for a number of years and each year the demand for it seems to grow as one tells another about the results they obtained from it.

PLANET Brand

The Planet Brand is a very choice grade of Alsike Clover. It is a good serviceable quality that you can get at a very decided saving in price. It does not require any more seeds per acre, and should produce entirely satisfactory results. Our customers buy large quantities of this grade every year. The color is not quite so dark as in our World Brand Western. The seed is a little smaller, but we know you will find it highly satisfactory. This seed is often used by farmers who have some Timothy of their own and use this for a mixture, or it can be combined with other grasses. This Alsike can be grown from Oregon to Maine, from Minnesota to Tennessee, as well as in southern states. We have grades to fit the demand of different buyers and certainly can serve you well on Alsike.

30 Years of Savings and Satisfaction

Dear Sirs:
Berry's has been supplying me with seeds for over 30 years. I have always found them very satisfactory and also cheaper than I could get them at home. Your service has been prompt and courteous.
Very sincerely yours, M. A. Piddock.

Manlius, N. Y.

WORLD BRAND

Alsike is a Clover that is adaptable to conditions that are unfavorable for other clovers. It is a very valuable crop. Pound for pound it is higher in seeding value than Red Clover. It will grow on wetter land than Red Clover and also is not so sensitive to acid conditions. You may be passing up a crop that you are needing when you pass up Alsike. It is a fine stemmed perennial clover. It has a beautiful green color. Less dusty than Red. Under favorable conditions will grow three to five feet tall. Prefers loam or heavy land. It is an excellent practice to sow a couple of pounds of Alsike with Red Clover. It helps to secure a better stand and a thicker growth. Alsike is generally easier to get started. The seed is smaller, five to six pounds per acre are a plenty. Stands trampling well and is good for pasture and makes wonderful hay.

ITEM
No. 54
ON
PRICE LIST

Finest Quality Western Seed

World Brand is beautiful, rich, dark green colored Alsike seed, has large berries, strong vitality, and is in our opinion the finest Alsike Clover that can be had. I know you will be proud to show this great Alsike value to your friends. We guarantee you a savings of at least \$3.00 per bushel. Post-paid 1 lb., 65c; 5 lbs., \$2.75; 10 lbs., \$5.00.

Inoculation Pays Big Dividends

FANCY Brand

This Fancy Grade of Alsike is equal in quality to what a good many dealers may sell as their best. It certainly is very nice seed, and will give you good success. Compared to the average it may easily rate as the best. You save \$3.00 per hundred in cost over our World Brand and \$6.00 to \$7.50 over most grades of this character. The seed will go just as far and you do not have to use any more seeds per acre. Our stocks of Alsike Clover this year are very good and we urge you to use some of it. It is a lot lower in price than Red Clover, and it goes much further. We would especially suggest that you stretch your Red Clover seed by putting in some Alsike. Even if you only use a pound or two per acre, you will find that a very good farming practice. A lot of farmers do it.

Respectfully, Peter Crestani.

LESPEDEZA

THE CLOVER THAT GROWS ON
POOR LAND WITHOUT LIME

Early Korean for the central corn belt

See Item
No. 75

on Price List

Berry's Early Korean has been widely known as the Early Giant Korean. It is a great producer and becoming more and more a crop of vital importance. The more farmers see of it the more anxious they are to start growing it. That is especially true during the hot summer months when Blue Grass pastures are thin and dormant. It is under these conditions that Lespedeza makes its best growth. It stands a lot of heat. It enriches the land, and makes very fine feed that is high in protein. It is often a life saver to have a field of Berry's Early Korean to give you high quality feed when you really need it.

This Lespedeza is also known as Strain #19604. It will mature seed 100 to 150 miles north of ordinary Korean. We consider this adapted to climatic conditions similar to those prevailing in the central and southern part of Iowa as well as into northern Missouri. That takes a large area in Nebraska, Kansas, Illinois, Indiana, Ohio, etc. It may be grown north of this area but we are not certain that it will mature seed north of central Iowa. U.S.D.A. states it will be a reliable

seed producer to the northern limits of Illinois. Another important factor is that the seedlings make an early start and seem to grow more vigorously than ordinary Korean.

Big Profit Features

Growth up to two feet has been reported in some dry years. It will stand a lot of hot weather. Will respond favorably to moisture conditions. You can grow it on very poor soil without lime or fertilizer. On the better land it will grow taller and heavier. We have had customers report that it grows twice as tall as common Lespedeza. It produces up to 1000 pounds of seed per acre. An Iowa farmer used it by sowing it with Oats in the spring. After the oat crop was taken off, a hay crop of Lespedeza was harvested in August and in October a seed crop was taken. That is three crops off the land in one year. Write for our Circular telling you more about this great Lespedeza and other varieties.

Small Lots Postpaid: 1 lb. 40c; 5 lbs. \$1.50; 10 lbs. \$2.75.

Showing leafy growth of Lespedeza

SERICEA THE PERENNIAL LESPEDEZA

Item No. 76 on Price List

Comes Up from the Roots
Each Year

This variety if started early in the spring develops a big root system. Excels Regular Korean as a soil builder. Has wintered over as far north as Vermont, New York and southern Michigan. It is adapted throughout the corn-belt and very well suited to southern states. Produces one main stem the first year, the second year it sends out 10 to 15 stems and the following years the growth gets still thicker and finer. It will grow to a height of two to four feet. Has a large carrying capacity as a pasture. Cattle will eat it readily after becoming accustomed to it. Do not sow as early as most clovers; April is good for Iowa. Sow around 12 pounds to the acre. Some sow a little earlier than April. Makes a wonderful crop. Our free circular on Lespedeza will also tell you more about this great perennial variety. There are many valuable characteristics in this crop. We urge you to grow some of it.

Small Lots Postpaid: 1 lb. 60c; 5 lbs. \$2.50; 10 lbs. \$4.50.

Showing growth of Sericea

REGULAR KOREAN

Grows Most Anywhere. Wonderful Pasture and Soil Builder.

Korean Clover is an annual. It grows only one year from a seeding. It reseeds itself very readily, and matures seed even after plants have been killed by frost. Thus, it is proving itself adapted farther north than was first thought possible. It is steadily and surely working its way north into Iowa, Illinois, Ohio and Indiana. The Early Korean described above also helps to popularize the crop farther north. It is quite a common practice to put Oats on land where Lespedeza has reseeded itself. After the Oats are off the Lespedeza is there to give an abundance of pasture from mid-summer until frost.

Korean Clover shows its greatest value as a pasture. It will do best during the latter part of June, July and up to killing frost. It can be maintained in permanent pastures because it reseeds itself: You can sow it on winter grain or spring grain. After the grain is gone, the Lespedeza comes on to make its growth. While not tall, the stands are very leafy, and that is where most of the feeding value lies. The yields are surprisingly large from a stand that seems fairly short. The fact that it will grow on the poorest land without lime, and that it will resist more heat and drouth than other clovers, makes it a very valuable crop.

Korean Clover Prices Are Lower This Year

Regular Grade Fancy Quality Item No. 70 on Price List. Special Iowa Grade selected to meet provisions of Iowa Seed Law. Item No. 71 on Price List. Scarified Korean seed with hulls removed. Germinates quicker. Requires only 2/3 as much seed per acre. Item No. 72 on Price List.

INOCULATE ALL LEGUMES with NODULE GERM

For Better Stands and Bigger Crops Use Berry's Nodule Germ
Inoculation Is Necessary

Legume crops which means all Clovers, Alfalfa, Vetches, Peas and Beans are soil building crops. However, they can build up soil only when they have the certain strains of bacteria working in the roots. Then and then only can these legumes take nitrogen from the air and use it for their own growth. If they do not have these bacteria they will actually rob the soil of nitrogen and leave it poorer instead of making it better. These crops use a lot of nitrogen. That is why mother nature has given them the power to take the nitrogen out of the air. You cannot be certain that you have the proper bacteria in your soil. Even though the crop may have grown on there well a few years ago does not mean that the bacteria are still there and alive. Chemical changes in the soil or other conditions may have killed them.

When you buy Berry's Nodule Germ you get a package containing millions of bacteria that are suited for the crop that you specify. Just put this on the seed. It is very simple to put on. Clear simple directions are printed on each package. You apply it just before seeding. Then when the seed germinates the bacteria are there, to penetrate the roots of the plants. Then it has the power to make its own nitrogen fertilizer out of the air.

We urge you to inoculate because the cost is small. We guarantee it to give you good results. If our nodule germ does not make nodules on the roots of your plants we will refund the price of the material. It is a wise investment. Inoculation may mean the difference between success and failure in getting a stand, or it may mean the difference between a vigorous growing stand and a poorly producing one. The cost is so small that no one should avoid or do without inoculation.

Berry's Nodule Germ Is a New Development

Alfalfa and Clovers	1 bu. 50c; 2 1/2 bu. \$1.00
Lespedeza	100 lb. size 50c.
Vetches	100 lb. size 50c

	1 bu. size 30c

Well inoculated
roots mean
bigger crops

Most inoculants are prepared so that you have to buy different packages for different kinds of legumes. Now in Berry's Nodule germ we have inoculation that combines different bacteria so that one package will inoculate Red Clover, Alsike, Crimson, Ladino and Alfalfa. However, Lespedeza, Vetch, Soybeans, Field-peas and Cowpeas require special inoculation as per prices shown at right. Be sure to state the kind of inoculation that you want. All prices are postpaid.

SPECIAL CROPS FOR SPECIAL PURPOSES AND PROFITS

LADINO GIANT WHITE DUTCH

THE NEW 4-PURPOSE PASTURE CLOVER

This clover is largely used for pasture but it also can be put in a silo or cut as a hay crop. It has big profit possibilities as a seed producer if the season is not too wet. Ladino is a widely adapted, easy to start, perennial clover. It is very palatable and nutritious. High in mineral and protein content. It is among the earliest legumes to start growth in the spring. Produces abundantly on upland of fair to good fertility. Will stand wetter land than Alfalfa or Red Clover. Good on loam and clay land.

It will grow two to four times as large as White Clover and six times as big as English Wild White Clover. Stems are erect, 10 to 15 inches long. Also has fleshy creeping stems that root at joints. Covers the ground thoroughly. One plant may occupy 2 or 3 square feet of space. Blossoms are as large as Red Clover. It is especially valuable mixed with other grasses like Timothy, Blue Grass, Orchard Grass and is sometimes used with Red Clover or Alfalfa in pastures.

Pennsylvania reports Ladino used as a poultry range, yielded as high as 30 to 40 tons of green feed per acre. May run as high as 30% protein on a dry basis. An 8 acre range carried 2500 to 3000 head of poultry from April until late October. On a dry basis, yield was calculated at 5.4 tons per acre. Illinois reports indicate 3 cows per acre may be pastured throughout the grazing season. Ohio tells of two cows and three calves per acre the entire season without any other feed.

Widely Adapted

It is being grown in most states from the Atlantic to the Pacific and south into Tennessee. Michigan says it can be used for hay, silage or pasture. Illinois says it is adapted to the entire state. A Kentucky report says it grows practically every month in the year. We recommend it for most any section and soil, unless soil is low in phosphorus. Phosphate and those elements can be readily supplied. On sand or very heavy clay we do not recommend it. The clover is shallow rooted and often does well on land underlaid with hardpan. It is impossible to tell you in this limited space all the wonderful features of Ladino. We urge you to try some and see what it will do.

A little goes a long way. There are over two million seeds in a pound. You can top seed on thin pasture in February or early March without covering. New seeding should be made on a firm well packed seed bed. Roll, if you can, before and after seeding. Two pounds per acre is plenty. In mixture, 1 pound is ample. Even half a pound will provide over 10 seeds per square foot.

Prices, Small Lots, Postpaid 1 lb. \$2.75; 5 lbs. \$13.00.

See Item No. 62 on Price List for quotations on Ladino.

See page 10 for description of New special Ladino mixtures. Also note that our Marvelous Mixture page 21 is now enriched with this wonderful clover.

Please write us if you have mislaid our Pink Price List

Showing luxuriant growth of Ladino in an 80 acre field in southern Iowa in mid September after a hay crop had been taken earlier in summer.

ALTA FESCUE THE KENTUCKY 31 TYPE

You may have read recently about a grass called Kentucky 31 Fescue and Alta Fescue. We have checked with several Experiment Stations. The reports are that these two grasses have been very similar in appearance and performance. That is why we call it Alta Fescue—The Kentucky 31 Type. We believe either one will give you equally satisfactory results.

This grass is adapted to a wide variety of soils, good or poor, wet or dry. It has a long growing season. In Kentucky it grows the year round. Helps control erosion on steep slopes. It is highly drought resistant. With this grass you can convert acres that otherwise may produce very little into profitable grass land.

The roots of this plant can penetrate very dense sub soils. Will survive standing water for a long time, especially during their semi-dormant stages. This grass is moderately tolerant to alkali in moderate amounts, if

moisture conditions are favorable. It will also thrive on quite acid soils. The heavy root system helps "open up" heavy lands below the plow depth. They also tend to choke out weeds.

This grass is most widely used for pasture. It is quite palatable. Makes good hay on fertile bottom land. In Oregon, over a 6 year period, it yielded 4.11 tons per acre compared with Reed Canary 2.71, Timothy 1.99, Orchard 1.66.

Sow about 10 to 12 lbs. per acre alone or as little as 4 or 5 lbs. when used with other grasses like Timothy, Brome and perhaps Ladino Clover. May be sown either spring or fall on a firm seed bed. You will be hearing more about this grass. Get started with some of it to see what it can do for you.

See Item No. 144 on our Price List.
Postpaid 1 lb. 75c; 5 lbs. \$3.25; 10 lbs. \$6.15.

BIRDSFOOT TREFOIL

Also Called Poor Land Alfalfa

A long lived, deep rooted legume that grows on poor land or rich soil, and on wet acres or dry ones. It is a great crop for pasture. Stands a lot of trampling and close grazing. Will stand more drought than Ladino. Provides the finest feed when most other pasture grasses and clovers are dormant. In short rotations Ladino may be better because it starts off quicker.

Do not confuse Birdsfoot Trefoil with ordinary Yellow Trefoil. The crops are quite different. Birdsfoot, especially the broadleaf, is greatly superior. Plants grow stems 12 to 36 inches long. Crop looks very much like fine stemmed alfalfa. Has a deep tap root with branches. Feeding value is high. Hay composition shows Protein 14.24%, Fat 2.90%, Fiber 29.60%, Calcium 1.10%, Phosphorus .28%.

Reports show this crop will grow throughout the northern half of the U. S. Virginia, Iowa, Illinois, Indiana and many states have done a lot of work with this crop. You will hear more about it. It will grow on light sandy and gravelly soils as well as heavy clay land. Stands a moderate amount of alkali. Write for our Free Circular on Trefoil giving more detailed information. Sow 4 to 6 lbs. per acre alone. Less in mixtures.

See Item No. 63 on Price List.
Postpaid 1 lb. \$1.35; 5 lbs. \$6.25; 10 lbs. \$11.75.

Better Than Advertised—Prices Lower

Gentlemen: Saline, Mich.
I have purchased practically all of my grass seed from you for several years. They have always been better than you advertised and at a much reduced price.
Sincerely yours, Orson E. Tobias.

CRIMSON CLOVER

This Clover resembles Red Clover in its growth. Blossoms are longer and brighter colored. Stems are somewhat more hairy. Grows 2 to 2½ feet, upright branching plants. It roots deeply. Provides generous quantities of nitrogen for soil improvement. It will grow on poorer soils than Red Clover. Very efficient for green manure. Plowing under a good crop of Crimson Clover is estimated to equal 20 loads of manure. Stubble alone plowed under is equal to 12 tons. It is considered a cheap source of nitrogen. One authority says it is worth \$20.00 to \$30.00 an acre in its nitrogen gathering value alone.

This crop is most extensively used in the south. There it is sown in the fall and acts as a winter annual like wheat. It prefers a cool growing season. When used in northern states it should be sown in the spring, as it will winter kill. Growth, when sown in the spring, depends upon season. Will make its full growth same year it is sown. Seed is larger than Red Clover. Sow 15 lbs. per acre. Our seed is of very fine quality.

Small lots postpaid 1 lb. 55c; 5 lbs. \$2.50; 10 lbs. \$4.50.

Quality Shows in Field Performance

Dear Sirs: Clifton Hill, Mo.
In every instance the shipments of seed I have received from you have been satisfactory in every way. Not only the quality but also the field performance of your seed has been the best.
Yours very truly, John H. Dickerson.

See Item No. 60 on Price List

SWEET SUDAN GRASS

DELICIOUS, NUTRITIOUS AND ENORMOUSLY PRODUCTIVE

It's New! It's Different! It's Better!

Here's something so new, so different and so superior to the old regular Sudan, that we predict it will replace it in a few years. It is a crop that was developed by crossing regular Sudan on Leoti. Leoti is a heavy yielding, sweet juicy sorghum. It has high resistance against disease and shattering of seed. Sudan is a fine stemmed member of the cane family that stools freely. It makes wonderful hay, but it is not sweet. In making this cross the best of these two crops was put into one. It grows very much like ordinary Sudan, stools even more freely and grows taller. The leaves are a little broader. It is a sensational yielder. This is so new that widespread yield reports are not as yet available. We do know that regular Sudan will produce up to 10 tons of hay per acre. Sweet Sudan with its free stooling, taller growth and broader leaves, should outyield it at least 30%.

**PRICE IS
Much Lower
This Year
Item 231
on Price List**

A Palatable Fast Growing Crop for Pasture or Hay

You should not plant this crop until the ground is thoroughly warm, around corn planting time. Plant it on a seed bed about like you would prepare for corn. The seed will then germinate rapidly if you have warm weather and a warm seed bed. It grows very fast. Sweet Sudan should give you 2 or 3 cuttings of hay the same year you sow it. It does not have to be cut at any definite period. If farm work interferes you can let it stand and cut it later. Even when you let the crop stand for seed, it still makes good feed. It has a delicious flavor, high feeding value, and that with big yields gives you a combination that is hard to beat.

Notice the photographs at the left, which show you how cattle prefer Sweet Sudan to the regular Sudan growing side by side. Regular Sudan is eaten alright, but not with the relish of Sweet Sudan which they eat close to the ground. A crop that will yield over 10 tons of hay per acre has a big carrying capacity as a pasture. You can pasture it just as safely as the regular Sudan according to all reports we have.

Provides a Long Season of Growth

Sweet Sudan is a little later in maturity than regular Sudan. It will not mature seed crop as fast, but it will maintain high quality feeding value for hay and for pasture longer. It is more valuable from a feeding standpoint. This crop is a great drought resister. It stands the hot weather extremely well. Thus you can have sweet, palatable, juicy food when many grasses are becoming dormant because of heat. You can use it for pasture any time after it gets 8 to 10 inches high until frost.

Planting Cost Very Reasonable This Year

The price is quite a bit lower than it was last year and the seedling cost is reasonable. You can get a very good stand from sowing 12 to 15 lbs. to the acre, which makes it only a little over \$1.50 per acre. You will get a finer growth by using 20 lbs. which will cost you a little over \$2.25 an acre. The seed that we have is new crop, thoroughly re-cleaned, high germination. Guaranteed free of Johnson grass and to be satisfactory in every respect. The fact that this

seed looks different from ordinary Sudan makes it easier to distinguish whether there is any Johnson grass present, which is not desired in the southern states. We urge you to grow some of this heavy producing, sweet, juicy, palatable grass this year. Show your neighbors something better and make bigger profits for yourself. Small lots Postpaid: 1 lb., 35c; 5 lbs., \$1.25; 10 lbs., \$2.25.

REGULAR SUDAN FOR QUICK DROUGHT RESISTANT GRASS

A Fast Growing Crop That Is Widely Adapted

Sudan grass belongs to the Cane family, but it is finer stemmed and a free stooler. It grows from 4 to 7 feet high. It will yield 4 to 7 tons of cured hay per acre. It has good feeding value. Livestock is very fond of Sudan. The first hay crop can be cut about 60 days after seeding. Second and third crop 30 to 40 days apart. You can sow it around corn planting time or just a little after, which will indicate how quickly you could get a valuable feed crop. Sudan is one of the best drought resisting grasses known. It stands a lot of heat. It supplies an abundance of fine pasture or hay during the dry months of summer when feed is often scarce. Since it yields so heavily you do not have to devote many acres to get a lot of feed from Sudan grass. It provides feed insurance, that is why every farm should have some of either the regular or Sweet Sudan.

Buy Your Seed Early This Year

The seed we have for our early trade is of the very finest quality. Our prices, as this catalog goes to press, are lower than last year, and we hope to keep them there. But we do recommend that you buy early to be assured of getting this high quality seed at these prices. We guarantee you a saving on the Sudan Grass seed that you may purchase from us. The true basis of value is the quality that you receive. We know that you will be delighted with the character of stock that we have for you. If the shipment fails to please you in any way, be sure to tell us. We will make a prompt adjustment in conformance with our guarantee of satisfaction to you.

LIST**

How to Handle Sudan Grass

Do not sow until corn planting time or after. Prepare a good seed bed like that for Corn. Drill in close rows or broadcast. Cover the seed about an inch deep. Sow 20 to 25 lbs. per acre. Begin pasturing it when it is about 8 inches high. It can be pastured until frost. Many consider it best not to pasture Sudan after frost as there is some danger of prussic acid developing while it is in a dying condition. Any growth there may be at that time can be used for hay and silage to be fed later. Generally cut for hay when in bloom, but can be cut earlier or later.

Price in small lots Postpaid 1 lb., 35c; 5 lbs., \$1.25; 10 lbs., \$2.10.

Berry's Seeds Give Best Results

Dear Sir: I find that I get better results from Berry's seeds than with any of the other companies I've done business with. They are everything they are recommended to be and more. Very good quality at a reasonable price. Sincerely, Eugene Doss

Fine Seed—Money Saving Prices

Gentlemen: Annada, Mo.
I have been using your fine quality seed for a number of years and have found it O.K. at a money saving price.
Yours truly,
Frank Busch

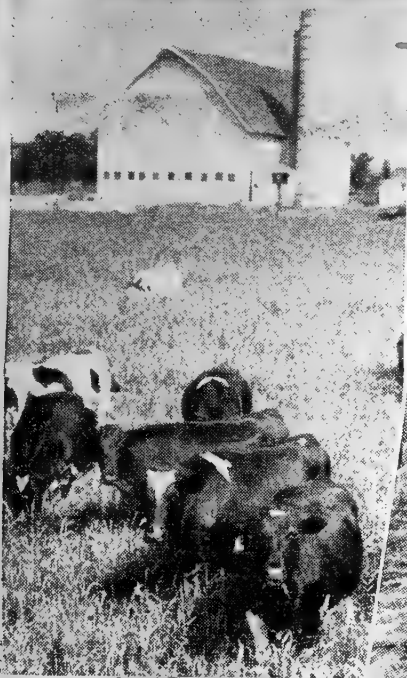

Photo on right shows how cattle will eat Sweet Sudan very close while nibbling on regular Sudan.

CORN BELT ALFALFA

START YOUR ALFALFA FIELD BY SELECTING YOUR SEED HERE

The Alfalfa That Satisfies Thousands

Berry's "Corn Belt" Alfalfa is very popular with our trade because of its heavy yields. It also has winter hardiness. We call it "Corn Belt" because it is so widely used in the main corn growing sections. Its use is by no means confined to this area. Customers in Northern states like Wisconsin, Michigan and Minnesota use seed of this character with highly satisfactory results. Eastern and southern states like it too. It generally outyields the far northern grown type.

Note the reports below from some of our customers. They are typical of many letters we get. They indicate further how widely this is used. Unless you feel that your soil or climatic conditions require an extra hardy strain we suggest "Corn Belt" as a dependable kind to sow. It is economical. You will find big savings in the seed. Read descriptions. Check prices. Get our samples. Compare values. You get your money's worth and "then some" in Corn-Belt Alfalfa.

GRADES OF CORN BELT

Berry's "Corn Belt" Alfalfa is available in four grades. Lot "Honest John" as described on page 22. That is our lowest priced grade but a great value. The Planet Brand or Lot "Big Krop" is a serviceable quality that gives you a lot for your money. **Fancy Brand** described opposite is a grade equal to what is often sold as the best. If you demand only the very finest extra fancy you certainly will be pleased with **Berry's World Brand**.

Berry's alfalfa stocks are among the nation's largest. We have **Dakota 12, Grimm, Cossack, Ranger, Buffalo, Hardistan**, etc. See pages 22, 23, 31, 32.

WHAT OUR CUSTOMERS REPORT

Joseph Ash of Otsego, Michigan: "We got some of your World Brand Corn Belt Alfalfa 2 or 3 years ago. It is doing so good we want some more."

C. A. Foster of Sparta, Ill., says he bought some of our cheapest Corn Belt Alfalfa 5 years ago. Still going strong. Has another piece of ground ready for more.

Ed Phienheimer of Shipshewanna, Ind., has used Corn Belt Alfalfa for seven years. Orders more. Says to send it whatever the price may be.

Ifan R. Arnsmeir of Juda, Wisc., reports our Corn Belt Alfalfa gave him four cuttings when his neighbors got only two. He had our lowest priced grade.

Wm. Koutny of Brandon, Iowa, states he obtained a fine stand. Lots better than some who paid five bucks per bu. more for their seed.

Oscar M. Hub of Riley, Wis., says the four bushels of Corn Belt Alfalfa was seeded with excellent results. Well pleased.

Frank L. Wilcox, Galloway, Ohio, wants another bushel and a half like the Corn Belt he got the year before which gave him very good results.

Wm. S. Van Tassel, Antwerp, N. Y., says: "I secured a wonderful stand last year of your seeds, especially of your alfalfa."

Loren M. Cocklin, Ridgeway, Mo.: "I bought your World Brand Corn Belt Alfalfa in 1935. It has produced better than any other alfalfa in my 40 years of experience with this crop."

Elmer Broedlow of Jefferson, Wisconsin, writes: "Just wish to say the alfalfa I purchased of you last year withstood the drought and ice of last winter. My seeding is excellent, although some report their seedlings are dead again this year."

Likes Berry's Seeds Best of All

Dear Sir: Suttons Bay, Mich.
I have been using your seed for a long time and have been well pleased with it. I will continue using Berry's Seed as I like it better than any I have ever used.
Yours truly, Leo Schaub.

ALFALFA SEED VERY SHORT THIS YEAR

We are faced with a rather drastic shortage of Alfalfa seed this year. The seed crop was only about half that of last year. A year ago very large quantities of alfalfa were used. There was a good supply and prices were lower than Red Clover. This year alfalfa markets are about the same as Red Clover and on some origins Alfalfa is higher.

Our price list will give you the nation's lowest prices at all times. We were fortunate in getting considerable seed bought to very good advantage. You are getting the advantage of that in extra savings so long as that seed lasts. Alfalfa supplies probably won't be adequate to supply all the demand regardless of price. Therefore we urge you to buy your alfalfa seed very early.

This year there will probably be a great increase in the use of Medium Red Clover, Mammoth and Alsike. A bushel of Red or Mammoth will sow 7 to 9 acres as against 4 to 5 acres with a bushel of alfalfa seed. A bushel of Alsike sows 10 to 12 acres. We can save you a lot of money on clover seed too. See pages 24, 25 and 26. However, to all those wanting to sow Alfalfa seed we can give a wide selection at money saving prices. You can get the best choice and lowest prices early. On the basis of quality and origin our prices should save you at least \$2.50 to \$5.00 per bu.

SEE PAGE 33 FOR TREATED ALFALFA SEED

FANCY BRAND

A Great Value in Alfalfa

Fancy Brand is "Corn Belt" Alfalfa. We often call this "Deafers" Fancy, because it is a quality often sold as "the best" in a retail way. It might easily pass for the best if you didn't compare it with an Extra Fancy Quality like our "World Brand."

You pay something extra when you choose the extra Fancy. The extra is largely for color and appearance. Berry's Fancy grade has good color and really looks nice. It is not quite as bright as World Brand. Because of this slight difference in looks you can buy it at \$1.50 per bushel less money. That is a worthwhile saving that appeals to many buyers.

Berry's Fancy Grade Corn Belt Alfalfa has high purity and smooth berries. It has good growing power. It is just as winter hardy as World Brand. In fact it will do everything the higher priced seed will do. The main difference is color and that difference isn't great.

Save \$5.00 Per Bu.

As stated Fancy costs \$1.50 per bu. less than Berry's World Brand. When you compare with any other prices on seed of similar quality you will find savings ranging up to \$5.00 per bushel. You can buy this lot or any other we sell and we guarantee a saving that will please you highly. If you don't think so when you get your seed, don't keep it. See our guarantee page 5. We want you to be completely satisfied.

Inoculate Alfalfa seed for better stands and heavier growth

Inoculation permits alfalfa roots to make nodules and gather nitrogen from the air. Be sure to read about it on page 27. It is easy to inoculate and the cost is low.
50c 1 bu. size;
\$1.00 for 2 1/2 bu.

Cleanest and Least Expensive Seeds

Dear Sirs: La Fayette, New York
I find your seeds the cleanest and least expensive of any I have ever bought. We've had excellent results. I also like the promptness of shipment.
Sincerely, James E. McVoy.

MATCHLESS ALFALFA SEED VALUES — SAVE MONEY

WORLD BRAND CORNBELT

See ITEM NO. 9 on Price List

Be Sure to Check This Value

Our old customers are well acquainted with Berry's World Brand quality. They know that they will get something extra nice and extra fancy when they order this grade. If you are not, as yet, a regular Berry customer, I urge you to compare this value with any that you can find anywhere, at any price. Page 30 tells you about our Corn-Belt alfalfa and I am anxious that you try this seed that has given such fine satisfaction to so many of our customers.

May Be Had Treated

We have a few lots of Alfalfa seed of which we have treated part of the seed in advance. This treatment protects the seeds and seedling plants against fungi, and it stimulates plant growth. See page 33 for detailed information. Cost only 50c per bushel extra.

Price Savings Guaranteed

This seed is priced to save you \$2.50 to \$4.00 per bushel. Look at the sample of Red Clover seed enclosed with this catalog. That shows the beautiful character of this top Grade seed. There is a big extra value in this World Brand.

Beautiful Quality, Highly Productive Alfalfa

In our opinion this Corn-Belt Alfalfa will yield equal to the best, and better than a great deal of alfalfa that is sown. Under average conditions you should find that it will make a taller growth and a considerably heavier yield. Customers in states like Wisconsin use very large quantities of seed like this. They use it in somewhat shorter rotation and like it because of its performance. Those dairy farmers know a good deal about getting the most seed out of an acre. Berry's World Brand will help you get that too. Many agricultural authorities are now recommending shorter rotations where alfalfa is used. This Corn-Belt Alfalfa should give ideal results in such a program.

Wide Selection of Alfalfa at Berry's

You will find the largest retail stock of alfalfa seed in the world right here in this book. No other seed house will offer you so wide a selection or at such genuine price savings. There are different grades to please different buyers. There are different varieties to fit different needs. For general all around utilization, we consider this Corn-Belt Alfalfa to be highly satisfactory. No matter how much more you might be willing to pay for seed of the character of this Corn-Belt stock, you could not buy any better. We know that in order to serve you by mail and get your business we have to give you more for your money. That is the basis upon which we have built our business to the Largest Seed House in the World selling Direct to Farmers.

LOT BIG-KROP

Very Choice Grade of Corn-Belt Alfalfa

This grade of alfalfa will bring you exactly the same kind of alfalfa that you will get from the World Brand grade described above. It is a good serviceable lot. We would term it a medium grade quality. It is quite a bit finer grade than the Honest John described on page 22. It is not as smooth and uniform as our World Brand Grade, not quite as nice in color nor are the berries quite as large. There is a saving of \$5.50 per hundred however, between these two grades and that is a saving worth while. You do not have to sow this at any heavier rate per acre. The germination per 100 seeds is not quite so high but you have more seed in a pound. This lot is used by a great many of our customers with very satisfactory results. It certainly is a very low price for seed that gives this type of satisfaction and is a value that we do not believe can be duplicated anywhere. It will appeal to thrifty buyers as a sound practical value.

ITEM
No. 5
ON
PRICE LIST

WESTERN GROWN

World Brand Arizona

I bought this lot of seed early so it can be sold at a very attractive price. On the basis of today's markets the price would be at least \$3.00 per hundred higher. Compared with average prices prevailing you will find the savings range up to \$6.00 to \$7.50 per 100 lbs. That is a big saving. We invite you to make comparisons. They show what you can gain by trading at Berry's.

This seed is the regular type of Alfalfa grown throughout most of the nation. It should not be confused with southern Peruvian Alfalfa which is non-hardy in northern states. Our Western Alfalfa is considered to be on a par with Argentine seed in hardiness and production. That has given satisfaction to farmers over a wide area throughout the Corn-Belt. This is World Brand Grade and that means the finest in quality in every way.

ITEM
No. 1
ON
PRICE LIST

"Certified" HARDISTAN

See Item 20 on Price List

This is that famous Hardistan Alfalfa that has resistance to bacterial wilt, as well as to extremes of cold and drouth. It is a strain of Turkestan Alfalfa. Hardistan stands up far better than the average Alfalfa in the cold dry region of the northern plains. That is a characteristic desired by many farmers in other areas.

Its most important feature is the resistance to wilt. Under favorable cornbelt conditions some of the other Alfalfa may outyield Hardistan. However, wilt seems to be becoming more prevalent. When you want the stand to be maintained for several years the yield of Hardistan will be much greater than from stands badly infested with the bacterial wilt.

This variety generally does not produce as much seed as others but that seed sells at a premium price. Most of our customers want Alfalfa for hay and pasture, rather than seed. If you want extra hardiness plus wilt resistance this is a good kind to buy. The Ranger Alfalfa on page 22 is also wilt resistant but more expensive.

Our Hardistan is Blue Tag Washington State Certified, which makes it extra hardy origin. That means the very best money can buy and we are pricing this to save you up to \$5.00 per bushel.

Exactly as Represented

Dardanelle, Ark.

Dear Sirs:

With the experience I've had in buying seed, I cannot but give a good word for Berry's. Your seed is exactly as represented as to quality and price, and always gives full satisfaction.

Sincerely, Arthur Cote.

Special CANADIAN GRIMM

Contains about
5% Sweet Clover

See Item 19 on Price List

You will find three lots of Canadian Grimm Alfalfa seed in this catalog. This "Special" Canadian and World Brand and Lot North on the next page. This "Special" Canadian is brighter in color than Lot North yet is lower in price. The color, germination, plumpness, etc., is practically equal to World Brand yet the price is about \$10.00 per 100 lbs. less.

Why so low priced, if it is so good? We got it at that discount simply because it contained around 5% of Sweet Clover. Including that it tests 99% pure. It is free of noxious weed seeds and high in germination. This is what happens to the Sweet Clover under cornbelt practices. It dies out after the first cutting in the second year. The second growth of Sweet Clover does not come from a crown like Alfalfa. It comes from the stems that are left standing. When you cut it close to the ground there is generally not enough stem left to make a growth so that only the Alfalfa remains.

We know there are many farmers who appreciate a chance to get seed of such beautiful quality at so low a price. Our "Special" Canadian is a very special value while it lasts.

Never Failed to Get a Good Stand

Bangor, Wisc.

Gentlemen:

Have ordered my seeds from you every year since I've been farming, and that has been 25 years ago. I think Berry seeds are the best for I have never failed to get a good stand.

Very truly yours,

William Haas.

Extra Values in Grimm

ALFALFA

Be sure to read page 27 of this catalog for information on inoculation. It pays to inoculate the seed of Alfalfa, Clovers, and all other legumes.

WORLD BRAND

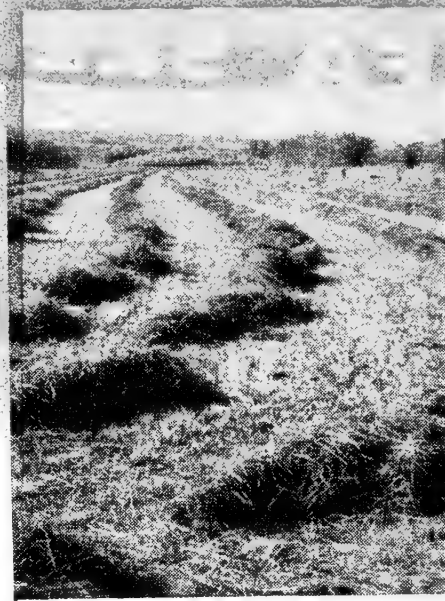

Canadian Grimm

ITEM
No. 17
ON
PRICE LIST

Our World Brand Canadian Grimm Alfalfa is the highest quality of our far northern seed. This seed is free of noxious weed seeds. It has high purity, color and germination. The seed is bright and plump. This quality will thoroughly please our super critical customers. It is priced to save you \$3.00 to \$5.00 per bushel.

Canadian Grimm Alfalfa seed is widely used in the United States. It is especially popular in the northern states among farmers who want to keep their stands for several years. The extreme Canadian winters kill out the weak plants. Only the extra sturdy hardy ones are left to produce seed. We have many customers even in states to the south of who want seed of this character. You will find it equal to Montana, No. Dakota, Michigan and seed of similar origin. Nature isn't controlled by artificial boundary lines.

For extra hardy character and extra fine quality order World Brand Canadian Grimm. See item No. 17 on Price list.

Lot "North" Canadian Grimm

Check Our Sample

If you received our December Bulletin you should have a sample of this great value. It isn't quite as high colored as our World Brand but it is high in purity and germination. Contains no noxious weed seeds. This seed sells at a very sharp discount below the World Brand Canadian described above. The main reason for this is that it contains around 4% of crop seed. By crop seed we mean other crops like Red or Sweet Clover. From a practical standpoint this is not objectionable to most farmers, especially when the saving runs around nine dollars per hundred pounds. When you mow the crop in the spring of the second year you kill practically every Sweet Clover plant. Its second growth comes from stems that are left standing, so close mowing in the second year kills it. Altogether the crop seed is 4% so that small amount would have but little effect on the crop.

99% Crop Purity

As explained in the opposite column this seed is very thoroughly cleaned and free of bad weed seeds. It runs about equal to our World Brand in germination. You can get equally heavy stands from this Lot North as from World Brand Canadian. Insofar as the production is concerned it is exactly the same. You will get the same hardy character and the same yields. This kind of Alfalfa is fine stemmed and leafy. Many farmers prefer this to the coarser growing kinds.

The saving on this Lot North is a big one. We know these "crop" lots are extra fine values and we snap them up for our customers whenever we get a chance to do so. There is another "Special" Canadian Grimm on page 31. See item No. 14 on our Pink Price list for quotations.

LOT BONAFAIDE

Medium Grade Grimm Alfalfa

Lot Bonafide has for years been in big demand with our trade. This year the quality is exceptionally nice. It is a selected bargain and a fancy grade of Grimm Alfalfa. Here is honest to goodness quality that will give you good serviceable results. It does not have that extreme extra fancy color that means materially higher prices. The seed however, has been well cleaned. It has good growing power. This seed also comes from sections that are classified as northern grown under most Government regulations. We are able to secure these lots which are quite nice looking but a little off in color at a very decided saving in price. When you can save \$10.00 a hundred pounds, that's a saving that's really big. We know that this type of seed has the ability to produce good results. A shipment that is guaranteed to please you in every way.

ITEM
No. 15
ON
PRICE LIST

LOT BED-ROCK

Our Lowest Priced Grimm Alfalfa

This is very serviceable seed of the same northern origin as Lot Bonafide. This lot places Grimm Alfalfa within the reach of every farmer who wants that kind of Alfalfa. It has good growing power, produces the same kind of Alfalfa as the higher priced seed. The berries in this grade are somewhat smaller and there are some off colored seeds in it. The germination per hundred seeds is a little lower but since the seeds are smaller there are many more seeds in a pound. Several tests by the ounce show more sprouts than from an ounce of the larger berried kind.

ITEM
No. 12
ON
PRICE LIST

We sell a lot of this Bed Rock Grimm Alfalfa every year. Our customers like it because they find it has the ability to produce good strong stands. We recommend sowing about 15 pounds to the acre. Since we have only limited supplies of this grade we suggest you order early.

Seeds Satisfy—Saves Money

Dear Sirs:
I am perfectly satisfied with your seeds in every way. Also, your low prices saves me money.
Yours truly,
C. W. Knoll

Consistent Values—Prompt Shipment

Dear Sirs:
I seeded 10 acres of oats this year with your Northern Grown Alfalfa seed. I never had a finer catch of alfalfa, and that is quite some satisfaction. I like your promptness in shipments and your consistent values.
Yours truly, Homer F. Kunkle

Special New Services. and "Special Orders"

Chemical Treated ALFALFA SEED

Great strides are being made toward getting better stands and bigger crops. Scientists are finding out mysterious things. They now know that many poor stands of Alfalfa are caused by certain fungi diseases in the soil. These organisms try to work into the seed even before it germinates. If they can't get in they attack while the seed is sprouting. Some are killed—others are weakened so they are never vigorous thrifty plants.

There are a number of chemicals that are used to protect seeds from fungi. Some are injurious to legume seeds. One, called Phygon was highly successful. It did more than kill fungi and increase the number of plants in each test plot. This treatment actually stimulated the growth of the plants. This treated seed developed more roots. This was partly the reason for its more vigorous growth but there also was apparently a hormone effect. In any event the effect on the Alfalfa stands, according to reports we received was very noticeable and remarkable.

We believe that the day is at hand when Alfalfa seed will all be treated. We are confident that many failures or partial stands can be avoided by treating Alfalfa seed in advance. Tests indicate that such treatment does not have any injurious effect on inoculation. In fact in several tests it helped inoculation. This is a new field of work. We do not know how our customers will take to it. To start with we have selected four lots of Alfalfa seed of which we will treat a portion in advance. You can get the seed from these lots, either treated or not treated. The treated seed will cost 50c per bu., more than the price shown on the Pink Price List.

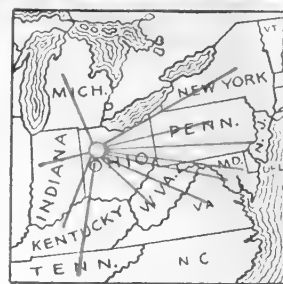

These pre-treated lots are as follows—Lot Gold page 22. World Brand Grimm and World Brand Cossack on page 23 and World Brand Corn Belt page 31. Now if you want to buy any other Alfalfa and have it treated we will have to open the sacks, treat and resack so the charge for treatment on any other lots of Alfalfa seed will be 75c per bushel. If you want this chemically treated seed just remit the regular price and then below add the "extra" for chemical treatment.

TRIPLE TREATED SEED CORN

The above information on seed treatment applies especially to corn. The thin coat on corn is easily cracked and fungi can easily get into the seed even before germination. That is why practically all seed corn is treated. Our investigations have convinced us that a "Triple Treatment" will be by far the most satisfactory. So we have combined Phygon X L and Sperson to give control over fungi and a small amount of DDT to give protection against weevil damage in event planting is delayed. All our seed corn has this Triple Treatment at no extra charge. This helps to assure you of the very best possible results in the field even under very unfavorable weather conditions after planting.

Eastern Shipments

We are very desirous of giving our many customers in eastern and east central states the best possible service. We also want to save you as much money as possible on freight charges. Therefore we have made arrangements to have some of our lots of seed shipped from an Ohio point. It is not possible to include all of our seed in that service this year. Next year we hope to have complete stocks of all farm seeds. For this year it will be confined to those items as are so listed on our Pink Price List.

The prices f.o.b. this eastern point may be a little higher than at Clarinda. They will save eastern customers money over Clarinda prices however, freight considered, because you will have less freight to pay on orders shipped from this point.

The big thing we can give you by shipping from Ohio point is much quicker service. You can get good truck, as well as rail service so specify truck shipment if that is what you prefer. Please order as early as possible if you want shipment from this eastern point so we may be sure to have ample stocks available.

SAVE OUR PINK PRICE LIST

As explained on page 5, we are pricing our seed on a separate price list this year so as to give you the benefit of the latest markets. Heretofore we have had to set prices so far in advance that they could not be protected very long. Our prices are still subject to change but by printing prices later they are less apt to change.

Therefore be sure to save the Pink Price List enclosed with the book. If it gets mislaid or if it becomes outdated please drop us a card and we will send you another copy at once.

We strongly advise buying from our first price list because we anticipate market advances in a number of lines. Some items may become sold out entirely. Our sincere desire is to give you the very best of seed and service and values and you can get the best by buying early.

Write for our FREE CIRCULAR on "Chemicals for Disease and Insect Control"

"Special Order" Farm Seeds

You will find in our catalog the largest assortment of farm seeds offered by any seed house. However there are some items you may want that are not in this book. There are some in Alfalfa and Clovers for which there is very little demand in most of our principal trade area. If you will write us about any special needs we will do our utmost to secure them for you. Among the seeds we have in mind are such as State Certified Blue Tag Grimm, Registered Canadian or Certified Ladak Alfalfa, Cumberland Red Clover, Madrid Sweet Clover and Yellow Hop Clover. We would not make this offer on the many special range grasses whose use is often confined to rather limited areas.

You may be sure that we stand ready to render seed service to you in every possible way. The many connections we have in the seed trade enables us to know about stocks available throughout the nation. There are some crop varieties you may read about of which seeds are not yet available for distribution. We study many of these crops and endeavor to make seeds of the proven sort available to our trade as quickly as possible.

Be sure to write us about any of your seeding problems at any time. We consider it a real privilege to be of service to you.

Advice on Truck Shipments

The great bulk of our shipments move by freight. However your nearest town may not have a railroad. Many such towns are served by truck. Some towns have truck depots where people may go to pick up their freight and pay transportation charges. It is easy to make truck shipments to those towns.

In other towns there are no such depots. The drivers deliver their freight to various stores in town but do not have a way of delivering to individuals. Our customers at such points generally make arrangements to have the seed left at some oil station, garage or some other merchant with whom they trade. They pick it up there later.

If you want a truck shipment to some place please make sure whether or not the truck company has a depot. If not be sure to specify to whom the shipment should be delivered. We will then address the shipment to you in care of that person or that place of business.

Sometimes there is more than one truck line in a town. One may have a depot, the other not. If possible give us the name of the truck line which you would like to have make delivery at your town.

Sensational Values in Garden and Nursery Departments

You will notice that we devote a much larger portion of our catalog to farm seeds than other seed houses. That does not mean that our Garden and Nursery departments are not equally as well equipped to serve you. It is true we do not show you as many beautiful colored pictures. The quality is just as much there as any of these expensive photographs show. Because we save on that expensive printing you can get lower prices and better values.

Look at the index column on the opposite page. You can tell in a few seconds that we have large selections in both the garden and nursery lines. Since we do not devote so many pages it becomes necessary for us to be very careful in our selection of varieties. We select those which we consider only the very best available. This simplifies your problem of ordering. The inferior varieties are eliminated.

You can order any item with the assurance that it is a quality variety that will not disappoint you.

A good family garden supplies your table with an abundance of health giving foods. You get them at their best, full of vitamins, right out of your own garden and at a fraction of the cost in stores. A home orchard of fruit trees and small fruits brings in tremendous dividends in delicious eating. They are a permanent investment that keeps growing and adding value to your farm.

If you are a renter you can generally plant small fruits to your advantage. They bear quickly. Fresh fruit is needed in our diets. You can get the best at the lowest price by growing them yourself. Be sure to study these pages and send us your order for garden and nursery stock. Our prices are lower, our service excellent and you will find the quality unsurpassed.

SWEET Clover

THE *Great* SOIL BUILDING Crop

RESTORES FERTILITY TO POOR LAND

Makes Good Land Better

Sweet Clover is an outstanding soil improving crop. It is unexcelled for putting nitrogen into the soil as well as other elements of plant food that are made available when the crop decays. A crop of sweet clover plowed under in the spring will increase corn yields as much as 20 bushel to the acre. There are some who will let the crop grow until it is in the full bloom stage. Somewhat higher fertility is returned in that way. When you follow that practice, however, it becomes too late to put the land to corn that year. If you plow it under early in the spring when it is six to eight inches high you can generally still put the land to corn and get wonderful results. We could give you results of many experiments on the fertility of sweet clover. Its effect on corn yields will illustrate what it can do for you. It has very strong tap roots that go down deep. The tap roots will break up heavy soils and permit better drainage. Sometimes they will break up hardpan. They decay quickly when plowed under. We do not recommend plowing the same year it is sown unless you use Hubam, the Seven Wonder Clover, described on page 36.

The first year Sweet Clover will afford pasture from the latter part of July until in October. In the spring you can get pasture from April to along in July with Yellow and from May until August with White. That is why a good many like to mix White and Yellow to prolong the pasture period. It is good for hog pasture if you keep it held down to a height of around 15 inches. It has a tremendous carrying capacity as a pasture. We cannot begin to tell you the great value of this wonderful crop. If you want to improve your soil and need some high protein feed, Sweet Clover will do the job and do it quickly.

It will make good hay in the fall of the year it is sown. Whether you use it for hay or pasture the first year, let it go into winter with a top growth of several inches.

Inoculate All Sweet Clover Seed

1 bu. size only 50c; 2½ bu. \$1.00

Grades and Varieties

We handle Sweet Clover in about the grades as the other clovers namely Planet, Fancy and World Brand. These grades are described on page 5 and on these pages. That which we list in our catalog as Sweet Clover is the White Blossom, unless otherwise specified. Because of conditions in the principal seed producing sections, it may contain some Yellow. The Yellow Blossom lives two years and matures about ten days earlier than White. It is finer stemmed and somewhat leafier. Grundy County matures about three weeks earlier than the common White and grows around 3½ feet high and lives two years. Hubam, also known as the Seven Wonder Clover, an annual variety, makes its full growth in one year, see page 36.

UNHULLED SWEET

This is the seed with the hull still on it, the way it grows on the plant. Unhulled seed is sown during the winter. It germinates slower than the Hulled and Scarified seed therefore it will not start to grow during a warm spell in the winter. It waits until spring and then begins to germinate and grow rapidly. We have quite a few customers who prefer to sow unhulled seed during the winter over any other method. They say it gives them the best stands they ever had. You should sow 20 pounds to the acre; just broadcast it. The seed does not have to be covered as the freezing and thawing during the winter and spring will generally give the seed sufficient covering. If convenient you can cover it a little bit before the growing season starts by harrowing or rolling, otherwise, let nature take its course. The seed that we have is Fancy, Re-cleaned Unhulled stock and is a high grade product. You will find our price to be very low as sweet clover is scarce and markets working toward higher levels. Send orders for unhulled seed early for Lowest Prices. Unhulled seed should be sown early.

Descriptions Reliable—Quality High

Dear Sir:
I have been using your seeds for many years and have had very satisfactory results. Your catalog descriptions are very reliable, as I have always received high quality seeds at a reasonable price.

Sincerely yours,
Dominick Branchi.

Good Results—Fine Stands

Gentlemen:
We have been buying seed from you for several years and have always had very good results. Some of the seed we sowed this spring gave us the best stand we ever had.

Yours truly,
John C. Pokornoski.

Sweet Clover seed production has been very drastically curtailed this year. It is one of the shortest crops in many years. We advise all of our customers to buy their Sweet Clover seed just as early as possible to avoid disappointment and possible higher prices later. We guarantee you a big saving on present quotations.

WORLD Brand YELLOW

Our Very Finest Quality

This biennial or two year yellow blooming sweet clover is liked by many for the reason that it is finer stemmed, and that it does not grow quite as tall. It also seems to tolerate more adverse conditions such as drought and closer grazing or cutting. It will make about as large a growth the first year as the white, 12 to 24 inches, depending upon soil and seasonal conditions. The second year it may not produce quite as much because it matures somewhat earlier. This is oftentimes the feature which is greatly desired. It is also quite a common practice to mix white and yellow, so as to lengthen the pasture season, and also to lengthen the bloom season in event you want to use it for bee pasture purposes. If you demand the very best in quality you will find it in our World Brand grade. The seed is thoroughly scarified, and the shipment is absolutely guaranteed to please you. Write for special quantity or delivered prices.

ITEM
No. 112
ON
PRICE LIST

FANCY Brand YELLOW

This Fancy Grade runs our World Brand quite a close second. We can sell it at quite a bit more attractive figure, because it contains a few off colored seeds, but aside from that you will find it a very dependable, satisfactory seeding. You can make an extra saving in buying this lot.

The fact that Sweet Clover is largely used for pasture purposes, makes Yellow very desirable especially where you want as much pasture as you can get the first year. It does not seem to winter kill as easily even if it is pastured relatively close, or if cut back fairly far for hay crop the first year. If you can let it go into the winter with a top growth of around 5 inches, that should be sufficient. That will not reduce the production next year as much as if the white were cut or pastured that close. From a soil building standpoint we consider that it is very similar to the white. In fact, we think it starts off a little faster in the second year. Some customers say they think it is easier to get a stand of yellow and that it will do well under less favorable conditions. By sowing sweet clover two years in succession there will be a seed crop maturing each year. In that way you can keep a stand of sweet clover for several years. Sow White or Yellow, use around 12 to 15 pounds to the acre. 1 lb. of any Sweet Clover Postpaid, 45c; 5 lbs., \$1.75 and 10 lbs., \$3.25.

Sweet Clover

PRODUCE

Enormous Crops

A Great Clover for Pasture

Sweet Clover has an unusually heavy carrying capacity as a pasture. It will take care of more stock per acre than any other clover. You can get this pasture the same year that you sow it. Sweet Clover when sown on winter wheat or with spring grain will grow quite fast after the grain crop has been removed. Generally you can begin pasturing it about the middle of July. You can put quite a lot of stock on it. Let the crop go into the winter with pretty good top growth. That will give the plants added strength and enable them to come through the winter in better shape. In the second year it starts growing early and grows until about mid-summer. Some make a practice of sowing sweet clover two years in succession on the same land. Thus when the second year clover is finishing its growth the new seeding is coming along to provide pasture for the balance of the season. You can maintain a pasture this way for several years.

Generally Makes Hay the First Year

While the sweet clover is used principally for soil improvement and for pasture it also will make good hay, especially the first year. It should be cut early enough in the fall so that the growth can come on to make good production before winter sets in or cut it with a fairly high stubble. The feeding value of sweet clover hay, especially the first year's crop, is very good. It should be well cured so that it does not become moldy. If you wish hay in the second year be sure to cut it with a high stubble. The second crop from sweet clover, in the second year of its growth, comes up from the stubble and not from a crown like alfalfa. If you cut sweet clover close to the ground in the second year of its growth you will generally kill it out. If it is cut for hay in the second year, cut it about the time the bloom buds begin to show up.

Berry's Prices Save You Money on All Grades

LOT DO-MORE SWEET CLOVER

A Very Special Favorite of Thousands

This Lot stretches your money over more acres than any other lot. It is our lowest priced grade, it has the quality that has been giving our customers satisfactory results. Naturally it isn't the finest for looks but the favorable reports that we get on this indicate its real value. After all, it is results that you are after when you make a seeding. Lot Do More has been scarified, it has been recleaned and tested. The crop from this grade is the same kind as secured by many of the higher priced grades. You do not have to sow this at any heavier rate than the other grades.

This Grade is in Big Demand

Every year we sell large quantities of Lot Do More. This year the quality is improved. As mentioned above, it is not the finest looking seed, it is somewhat off-colored. The germination per 100 seeds is lower than in the larger berried grade. The berries in "Do-More" are smaller. That is why it gives such good results. The larger number of seeds per pound generally offsets the lower tests per 100 seeds. You sow by weight and measure and not by counting out so many seeds per pound that counts. The number of sprouts per pound therefore may give you as lower priced seed than common White, and it will bloom about 3 weeks earlier. In some instances that is also quite a decided advantage. This Grundy County White comes only in the finest quality, World Brand grade. It is beautiful bright cleaned seed, and it is priced to really save you some money. We will be very glad to take care of you on this Dwarf Type Sweet Clover. Please order early because supplies are very definitely limited.

ITEM No. 101 ON PRICE LIST

LOT WONDERFUL

An Extra Value in Fancy Seed

This is a beautiful lot of Fancy White Sweet Clover. It comes quite close to our World Brand in appearance and all around quality. The size of the berry, the color of the seed, the germination, and purity are all good. It is as nice a quality as some dealers sell as their very best. You will find it thoroughly dependable. Like the Do-More it is the White Sweet Clover. This lot has a little mottled yellow in it that indicates there might be a small amount of White Sweet Clovers.

This is an Especially Low Price

The supplies of Sweet Clover seed this year are the shortest they have been in many years. The supplies are exceedingly limited. That makes a value like this Lot Wonderful all the more outstanding. For all practical purposes this lot will do everything that the World Brand will do, and you can buy at a saving of \$1.50 per hundred. We will gladly send you a sample so that you can see how much you get for your money in this great value. You can order it with the assurance that you will be perfectly satisfied with the seed when you get it. If for any reason it fails to please you, you can return it and your money including transportation charges will be refunded. Lot Wonderful is indeed a wonderful value.

ITEM No. 103 ON PRICE LIST

Be Sure to Inoculate all Sweet Clover. See Page 27

GRUNDY COUNTY *White*

Matures Earlier and Grows Shorter

The Grundy County White Sweet Clover is quite a favorite in sections where ordinary Sweet Clover grows too rank. This variety seldom grows over 3 to 3½ ft. tall in the second year. That is quite a distinct advantage where the common grows too rank. There is another advantage in the Grundy County, that is, it ripens its seeds more uniformly. Ordinary Sweet Clover may have new blossoms and mature seed at the same time, but Grundy County seed ripens much more evenly. In addition to being smaller, it is also quite a bit earlier than common White, and it will bloom about 3 weeks earlier. In some instances that is also quite a decided advantage. This Grundy County White comes only in the finest quality, World Brand grade. It is beautiful bright cleaned seed, and it is priced to really save you some money. We will be very glad to take care of you on this Dwarf Type Sweet Clover. Please order early because supplies are very definitely limited.

ITEM No. 115 ON PRICE LIST

Lot SAV-MOST *YELLOW* SWEET CLOVER

Our Lowest Priced Yellow Blossom

This is the biennial Yellow Blossom Sweet Clover that is in big demand. It is somewhat leafier than the White Blossom. It does not grow as tall and coarse. It blooms and matures 10 days to 2 weeks earlier than the White. Many prefer it for hay purposes because of its finer type of growth, and others state they think that it is easier to get a stand of the Yellow. In this Lot Sav-Most you get a very low cost on this fine stemmed leafy Sweet Clover. It gives you a lot of value at a low cost. Like Do-More White it is not as fine looking, but has the ability to produce satisfactory results. In sowing this seed at the rate of 12 to 15 lbs. per acre should give you a good stand. Sow it alone or mix it with White Sweet Clover, or with other grasses for pasture purposes. Sweet Clover is a good money making crop. Stands heat and drought. Produces a lot of valuable feed and builds up soil in a remarkable way. This certainly is a big value while it lasts.

ITEM No. 110 ON PRICE LIST

Many Years of Fair Dealing and Saving

Gentlemen: Sheridan, Ind.
For the past 25 or 30 years, I have been sending you my orders for seed. I have been well pleased with the seed and your fair dealings. If I could not have saved money, I would have bought seed here.
Very truly yours, G. B. Harris.

Prompt Service—Satisfactory Quality

Dear Sir: Hamilton, Ohio
I have used Berry's Seeds for the past 6 years and they have been very satisfactory in quality and seeding cost. My orders have always been given prompt attention. You can depend on an order from me each year.
Respectfully, Elwood Stock.

World Brand WHITE SWEET CLOVER

This is the cream of the crop from a quality standpoint and also varietal purity. Due to the very short crop of Sweet Clover this year Berry's buyers covered a wider section of the United States and Canada than ever before to assure you of the best. Our World Brand quality means only the very highest standards of purity, germination, color, size of berry, etc.

In order to get enough seed that would come up to our World Brand quality requirements Berry's have bought Sweet Clover from Oklahoma all the way up into Canada and from Ohio, west into Montana. Berry's were pioneers in introducing this crop to American Agriculture, and are today probably the World's largest handlers of it. Come to seed headquarters when you want the best of anything at a price to save you money.

What do we mean by varietal purity? Most Sweet Clover today is mixed to some extent, that is, the White will contain some Yellow. In our World Brand, Berry's choose the finest seed that grows, although it isn't 100% White and will contain a trace of Yellow.

Our supplies of this very finest seed may be gone before the season is over. We can't replace them at any price when that happens so order early. The early buyer always gets the best of service and quality at lowest prices.

(Be sure to write us if our Pink Price List is mislaid)

ITEM
No. 104
ON
PRICE LIST

PEARL CHOICE QUALITY WHITE SWEET

Serviceable Quality—Guaranteed Satisfactory

Don't expect the best quality when you order this grade. Fancy Brand is better and World Brand is the best. Expect a quality though, that from a results standpoint will please you. In making World Brand so extra nice, we grade out the smaller berried seeds; we eliminate the discolored ones, etc., which go into our lower grades. This seed is just as uniform though, and as thoroughly cleaned as the best. In test, the purity and germination will naturally be lower, it may contain a little more Yellow Blossom but in value it is equally great. It does a satisfactory job or we couldn't guarantee it, nor would thousands of our thrifty minded customers continue to reorder it.

Samples on Request. Compare Values

To buy intelligently you should see for yourself the value in each offer. Ask for samples of all our four grades of White Blossom, along with our complete purity and germination test. Compare them. Our customer's needs vary. You be the judge of which will be the most economical for your job. This also shows you the savings possible by ordering direct from Berry's at wholesale prices.

LOT PREMIUM A GREAT VALUE IN MIXED SWEET CLOVER

Fine Quality at Our Lowest Price

This is our biggest Sweet Clover value of the year. It meets our customers' demands for high quality at a price that will save dollars per bushel. Lot Premium is mainly White Blossom type but contains more Yellow Blossom than our regular grades of White. This mixture has definite advantages. It gives you earlier pasture than White alone and also over a longer period. For hay, the Yellow Blossom present will help to improve the quality. It is equally good for soil building purposes to plow under.

This seed is of high purity, all hulled and scarified for good strong quick germination. Because it is mixed more than average we have been able to buy this seed at a discount and this saving is passed on to you in our special low price. Some seedsmen don't sell the straight White and Yellow as we do, so would offer this to you as just Sweet Clover for their best grade. We don't think this value can be equalled anywhere. It will fill more of our customers' needs than probably any other quality offered.

Very Satisfactory Results from Berry Seeds

Dear Sirs: Northampton, Pa.
The seed which I have been buying from you for quite some time has given very satisfactory results. The stands have been very good.

Yours truly, Lester R. Becker.

Supplies Limited—Order Early

We tell all old and new customers each year to order as early as possible. We can give them better service and qualities, a more complete selection and lowest prices. The Sweet Clover market is very strong today as the crop was the shortest in 24 years. Too, with the shortage of Red Clover supplies and the very high price, more Sweet Clover will be in demand. On the present market, were we to have to replace this lot, our price to you would have to be a lot higher. We can protect this price only as long as early purchases last so it is up to you to order now and take advantage of this extra saving.

Build Bigger Profits

Get started with Sweet Clover this year. In comparison with other Clovers and Alfalfa it has more value at present prices than ever before. Get the most out of your crop by using inoculation. It is your cheapest crop insurance and easy to apply. Sweet Clover is a great soil builder when inoculated. Order in 2½ bushel units for greatest economy. That will take care of up to 3 bushel. Special offer on Berry's Nodule Germ with Lot Premium Sweet Clover orders. 1 bu., 40c; 2½ bu. size 75c; 5 bushels for \$1.35.

Prompt Courteous Service Is Satisfactory

Dear Sirs: Lancaster, N. Y.
I have always been very satisfied with the seed I bought from your company. I also like your prompt and courteous service.

Yours very truly, Dawn A. Brunck.

**WHERE
YOU CAN CUT
LIVING COSTS
DRASTICALLY**

There is health, pleasure and profit in growing your own fruits and vegetables.

Delicious VEGETABLES AT LOW COST

If you want to save money in 1949, and cut down on your grocery bill be sure to plant a large Vegetable garden. You will be able to cut your food budget considerably and provide health giving, fresh vegetables for your table.

But, here is the important thing to remember. You must have a good crop. To help insure yourself against a failure, be sure to plant Berry's Garden Seeds. The type of seed planted makes a great difference in the quality of food which you raise. Berry's select varieties are noted for their productiveness and quality. We constantly strive to secure for our customers, the type of seed that will mean better vegetables in every way.

See Guarantee below. Then check our prices. You will find them low. Be sure to order early as some varieties are short this season. By contracting with reliable growers in large quantities, we are able to give you better seed at a better price. Send your order in today.

SPECIAL SAVINGS WHEN YOU BUY IN BULK

When we speak of "Bulk" we mean in lots of 1/4 pound, 1/2 pound, 1 pound or larger lots instead of in packets. The average packet is intended mostly for the small gardener. When you buy in the larger quantities you get a lot more seed for your money and make big extra savings.

See Post Card Enclosed

You will find enclosed in this catalog a post card addressed to the Berry Poultry Farm of Clarinda, Iowa. This is a different firm from the Berry Seed Company. While there is no connection between these companies we are sure you will be well pleased with any dealings you may have with the Berry Poultry Farm. Mail this card promptly and you will hear from them direct. They will send you a free large poultry catalog, printed in colors.

BERRY'S GUARANTEE

Our large garden seed business is built on the firm foundation of thousands of satisfied customers and each year new thousands find Berry's value outstanding. Our seeds are all laboratory tested and produced by dependable growers.

We positively guarantee our garden and flower seeds to grow. If they fail to grow due to poor germinating quality of the seed we will replace such seed free of charge. Safe arrival as well as satisfactory quality are also guaranteed.

It is easy, safe and economical to order by mail. Save money and buy on an unqualified replacement guarantee.

If you use large quantities of vegetable seeds be sure to write for our MARKET GARDENERS PRICE LIST.

WE DO NOT SHIP NURSERY STOCK C.O.D. All prices are prepaid.

Your friends will appreciate an opportunity to grow a better garden. Tell them about Berry's Tested Seed. They are guaranteed to grow. Our attractive prices will please them too. We will gladly send them a catalogue if they will write for one.

We are one of the oldest and largest seed houses serving thousands of new customers each year. We guarantee safe arrival of all orders.

BERRY'S FARM FAMILY GARDEN

WILL PLANT AN ACRE OF DELICIOUS, HEAVY YIELDING VEGETABLES

This is a collection of garden seeds designed especially for farm or large city gardeners. The selection of varieties and quantities has been made in cooperation with state authorities. This new revised assortment represents in our opinion the fullest measure of quality and value we have ever sold.

This collection will provide your family with an abundance of delicious, crisp fresh vegetables and plenty left for canning and storing. Each variety has been selected for its

fine quality, excellent flavor and heavy yield. By making it an all high quality assortment it saves you a lot of time in making out your order. We save time in filling orders, as we can put up these collections in spare moments. Save on living costs by growing a fine garden. Save on garden cost by ordering this Farm Family Garden which contains the following seed. This has a regular catalog value of \$5.00. Average retail price would probably range around \$6.00 to \$6.50.

146 KENTUCKY WONDER WAX. 68 days. A fine wax pole bean, very early. Pods golden yellow, delicious flavor. Postpaid: $\frac{1}{4}$ lb., 18c; $\frac{1}{2}$ lb., 30c; 1 lb., 55c; 3 lbs., \$1.50.

119 KENTUCKY WONDER WHITE. Developed by the U. S. Department of Agriculture as a high yielding type of Kentucky Wonder. Plants vigorous with dark leaves. Pods oval smooth straight, dark green, stringless when young. Seeds white. Excellent for dry shell beans. Postpaid: $\frac{1}{4}$ lb., 18c; $\frac{1}{2}$ lb., 30c; 1 lb., 55c; 3 lbs., \$1.50.

149 MISSOURI WONDER OR NOXALL. 65 days. The earliest green podded pole or corn hill bean. Pods long, round and tender. Postpaid: $\frac{1}{4}$ lb., 16c; $\frac{1}{2}$ lb., 28c; 1 lb., 49c; 3 lbs., \$1.35.

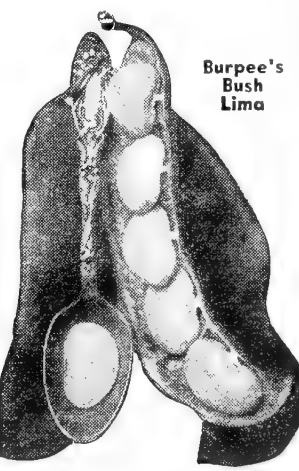

145 KING OF THE GARDEN POLE LIMA. 88 days. A strong grower and heavy yielder. Uniform pods, of fine quality. Postpaid: $\frac{1}{4}$ lb., 16c; $\frac{1}{2}$ lb., 28c; 1 lb., 49c; 3 lbs., \$1.35.

142 FLORIDA BUTTER POLE LIMA. 78 days. Sometimes called Speckled pole. Very popular in the South. Medium sized beans of high quality. Postpaid: $\frac{1}{4}$ lb., 15c; $\frac{1}{2}$ lb., 25c; 1 lb., 45c; 3 lbs., \$1.20.

143 SIEVA POLE LIMA. 77 days. A small seeded Pole Lima. Very prolific and early maturing. Small flat beans of the highest quality. Postpaid: $\frac{1}{4}$ lb., 15c; $\frac{1}{2}$ lb., 25c; 1 lb., 45c; 3 lbs., \$1.20.

Burpee's Stringless

Burpee's Bush Lima

POLE BEAN COLLECTION

$\frac{1}{2}$ lb. Kentucky Wonder Wax, 30c.

$\frac{1}{2}$ lb. King of the Garden Lima, 28c.

$\frac{1}{2}$ lb. Kentucky Wonder, 28c.

Catalog Value 86c. You Save 16c.

No. 112—3 varieties only, 70c Prepaid.

LIMA BEANS

137 HENDERSON BUSH. 65 days. The small butter bean known as "Baby Lima." Plants bushy, very productive. Early. Delicious flavor. Postpaid: $\frac{1}{4}$ lb., 15c; $\frac{1}{2}$ lb., 25c; 1 lb., 45c; 3 lbs., \$1.20.

139 BURPEE'S BUSH. 77 days. Very early. Plants dwarf, vigorous growers, bearing until frost. Pods large, tasty, finest quality. Postpaid: $\frac{1}{4}$ lb., 18c; $\frac{1}{2}$ lb., 30c; 1 lb., 55c; 3 lbs., \$1.50.

138X FORDHOOK 242 BUSH. 75 days. Potato lima type. Plants strong, erect, bearing pods in clusters of four to eight. Postpaid: $\frac{1}{4}$ lb., 18c; $\frac{1}{2}$ lb., 30c; 1 lb., 55c; 3 lbs., \$1.50.

DELICIOUS YELLOW POD WAX BEANS

Sure Crop Wax Bean

126 NEW BRITTLE WAX. 53 days. The outstanding variety for the home garden. Plant large, erect, vigorous, very productive. Handsome yellow pods, round, slightly curved, extremely brittle, fleshy, succulent, absolutely stringless and fibreless. The standard of highest quality. Postpaid: $\frac{1}{4}$ lb., 18c; $\frac{1}{2}$ lb., 30c; 1 lb., 55c; 3 lbs., \$1.50.

127 PENCIL POD BLACK WAX. 55 days. Of finest quality. Large plant, very productive. Pods round, slightly curved, golden yellow, absolutely stringless, brittle and without fibre. Postpaid: $\frac{1}{4}$ lb., 16c; $\frac{1}{2}$ lb., 28c; 1 lb., 49c; 3 lbs., \$1.35.

130 TOP NOTCH GOLDEN WAX. 51 days. This is an improved strain of regular Golden Wax. Pods average one inch longer and are much more productive. Very early—our best for the home gardens. Postpaid: $\frac{1}{4}$ lb., 16c; $\frac{1}{2}$ lb., 28c; 1 lb., 49c; 3 lbs., \$1.35.

117 SURE CROP WAX. 53 days. Fine for the home garden. A later variety but a heavy yielder under unfavorable conditions. Absolutely stringless pods. Postpaid: $\frac{1}{4}$ lb., 16c; $\frac{1}{2}$ lb., 28c; 1 lb., 49c; 3 lbs., \$1.35.

DRY SHELL BEANS

148 GREAT NORTHERN OR IDAHO. 90 days. The most popular navy bean grown. A tremendous yielder of large white beans. Exceptional quality, the best for soup or baking. Postpaid: $\frac{1}{4}$ lb., 14c; $\frac{1}{2}$ lb., 20c; 1 lb., 35c; 3 lbs., \$1.00.

147 MICHIGAN NAVY. 95 days. A hardy and prolific small, almost round white navy bean. Pods about 4 inches long. Used generally for baking. Postpaid: $\frac{1}{4}$ lb., 14c; $\frac{1}{2}$ lb., 20c; 1 lb., 35c; 3 lbs., \$1.00.

118 PINTO. 100 days. A dry land bean that does well in the West and South. Used for making chili. Oval shaped seed of light buff with brown markings. A heavy yielder. Postpaid: $\frac{1}{4}$ lb., 14c; $\frac{1}{2}$ lb., 20c; 1 lb., 35c; 3 lbs., \$1.00.

150 RED KIDNEY. 95 days. The old fashioned baking bean. Produces large flat green pods, well filled with large dark red kidney-shaped beans, rich in flavor. Postpaid: $\frac{1}{4}$ lb., 16c; $\frac{1}{2}$ lb., 28c; 1 lb., 49c; 3 lbs., \$1.35.

Kentucky Wonder

BERRY'S*Tender Delicious***SWEET CORN****Early Hybrids****SPANCROSS**

66 days from planting to eating. An extra early golden Hybrid with cold resistance. Can be planted in April in all but the most northern states. Medium sized ears—short stalks. No. 291X— $\frac{1}{4}$ lb., 17c; $\frac{1}{2}$ lb., 30c; 1 lb., 55c; 3 lbs., \$1.55. Postpaid.

EARLY GOLD

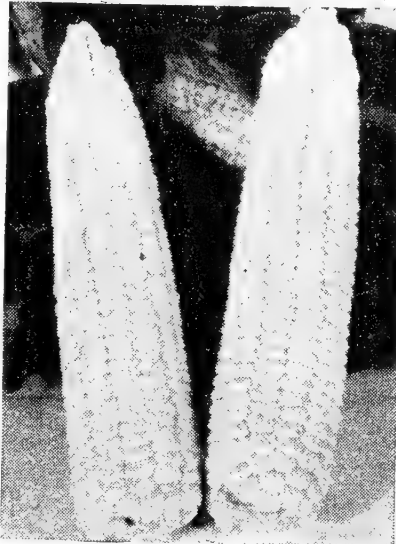

Our best early yellow sweet corn. 70 days from planting to eating. A good sized extra early variety growing $5\frac{1}{2}$ to 6 feet tall. Ears are uniform, 12 to 16 straight rows well filled tips, $6\frac{1}{2}$ to 7 inches long. Produces prize winning ears. We know you will be delighted with its tender, sugary, sweet flavor. Be sure to try some. No. 280X— $\frac{1}{4}$ lb., 18c; $\frac{1}{2}$ lb., 35c; 1 lb., 60c; 3 lbs., \$1.70. Postpaid.

Late Hybrids**STOWELL'S EVERGREEN HYBRID**

A favorite variety at its best. 90 days. White kernels. Of many hybrids developed of the Stowell's type, we have selected this as the best. It gives you unsurpassed Stowell's quality and increased yields. It is vigorous and highly resistant to disease, wind and drought. Plant successively at one week intervals. No. 279X— $\frac{1}{4}$ lb., 18c; $\frac{1}{2}$ lb., 35c; 1 lb., 60c; 3 lbs., \$1.70. Postpaid.

COUNTRY GENTLEMAN HYBRID

97 days. Although the ear resembles Country Gentleman in general this hybrid will be found greatly superior to the old variety especially as to uniformity of size and maturity. Has fine deep kernels, heavier rooting system and yields heavily. No. 274X— $\frac{1}{4}$ lb., 18c; $\frac{1}{2}$ lb., 35c; 1 lb., 60c; 3 lbs., \$1.70. Postpaid.

HYBRIDS

Golden Cross

Why pay more for Hybrid sweet corn? Because Hybrids outyield open pollinated varieties, have large more uniformly shaped and filled ears, are sweet (actually contain more sugar), and Hybrids are disease resistant. You don't throw away half your crop because smut is in the ears when you plant Hybrids.

Plant early, midseason and late varieties on the same day. This will give you a succession with less labor.

Mid-Season Hybrids**MARCROSS**

75 days. A fine market and home garden variety. Stalks are short but sturdy, highly resistant to bacterial wilt. Ears are long and plump with 10 to 14 rows of medium broad kernels of finest quality. No. 294X— $\frac{1}{4}$ lb., 17c; $\frac{1}{2}$ lb., 30c; 1 lb., 55c; 3 lbs., \$1.55. Postpaid.

GOLDEN CROSS

80 days from planting to eating. A main crop variety that has proved its value over a number of years. Grows 6 feet tall, produces two or more ears per stalk. Ears 8 inches long, 10 to 14 rows, very uniform in size and shape. No. 276X— $\frac{1}{4}$ lb., 17c; $\frac{1}{2}$ lb., 30c; 1 lb., 55c; 3 lbs., \$1.55. Postpaid.

TENDERGOLD

81 days from planting to eating. An outstanding main crop variety, grows $6\frac{1}{2}$ to 7 feet tall. Produces best quality fodder. Ears 7 to 8 inches long with 10 to 14 rows. Highest eating quality. A dandy for the farm garden. No. 275X— $\frac{1}{4}$ lb., 17c; $\frac{1}{2}$ lb., 30c; 1 lb., 55c; 3 lbs., \$1.55. Postpaid.

IOANA

87 days from planting to eating. A main crop "All American Winner" producing especially attractive ears. Grows $6\frac{1}{2}$ feet tall with good drought resistance and few suckers. Ears are 8 inches long with 12 to 14 rows, very uniform, cylindrical, and well filled. Exceptionally sweet and well flavored. A really outstanding golden variety. No. 282X— $\frac{1}{4}$ lb., 17c; $\frac{1}{2}$ lb., 30c; 1 lb., 55c; 3 lbs., \$1.55.

BERRY'S 12 ROW HYBRID BLEND

A combination of 12 row hybrids with same plant heights and that mature at different times. Enjoy hybrid quality over a long picking period of at least two weeks by planting this blend. No. 286X— $\frac{1}{4}$ lb., 15c; $\frac{1}{2}$ lb., 28c; 1 lb., 50c; 3 lbs., \$1.40. Postpaid.

Favorite Open-Pollinated Sweet Corn

Pick corn over a long period by planting early, midseason and late varieties on the same day. This practice saves you time and labor.

Early Varieties**GOLDEN BANTAM**

The favorite early yellow sweet corn. Ears 5 to 6 inches long, kernels broad, deep golden yellow, very sweet, juicy and tender. No. 277— $\frac{1}{4}$ lb., 14c; $\frac{1}{2}$ lb., 20c; 1 lb., 35c; 3 lbs., \$1.00. Postpaid.

GOLDEN GIANT

Mid-season yellow variety, good for home and market garden. A week earlier than Bantam. No. 278— $\frac{1}{4}$ lb., 14c; $\frac{1}{2}$ lb., 20c; 1 lb., 35c; 3 lbs., \$1.00. Postpaid.

EARLY SUNSHINE

Four to five days earlier than Golden Bantam. Good sized ears, 10 to 12 rowed. Kernels golden yellow, sweet, tender. No. 281— $\frac{1}{4}$ lb., 14c; $\frac{1}{2}$ lb., 20c; 1 lb., 35c; 3 lbs., \$1.00. Postpaid.

ADAMS EARLY ROASTING CORN

Grown extensively in the South for early use. Plants grow 6 feet high and bear $7\frac{1}{2}$ inch ears with 12 to 14 rows of white kernels. Tender at roasting stage. Ready to eat about 70 days after planting. No. 292— $\frac{1}{4}$ lb., 14c; $\frac{1}{2}$ lb., 20c; 1 lb., 35c; 3 lbs., \$1.00. Postpaid.

Special "Flavor" Collection**SWEET CORN "FLAVOR FAVORITES"**

$\frac{1}{4}$ lb. Early Golden Sunshine Sweet Corn, $\frac{1}{4}$ lb. Golden Giant Sweet Corn and $\frac{1}{4}$ lb. Adams Early Roasting Corn. Regular Catalogue Value 42c. Order No. 295—Golden Corn collection, 35c postpaid.

GOLDEN MIDGET

The sweetest corn you ever ate. Grows on miniature plants about $3\frac{1}{2}$ feet tall and can be sown in rows 24 inches apart. 3 to 4 ears to a stalk. Will mature in about 55 days. Excellent for deep freezing as it does not lose its flavor or tenderness. Worth trying in your garden. No. 273, large packet 20c postpaid.

Later Varieties**GOLDEN EVERGREEN**

A cross between Golden Bantam and Stowell's Evergreen combining the deliciously sweet flavor of Golden Bantam with the tenderness of Stowell's Evergreen. Ears with 14 to 18 rows, kernels rich golden yellow of finest quality. No. 289— $\frac{1}{4}$ lb., 15c; $\frac{1}{2}$ lb., 22c; 1 lb., 38c; 3 lbs., \$1.05. Postpaid.

STOWELL'S EVERGREEN

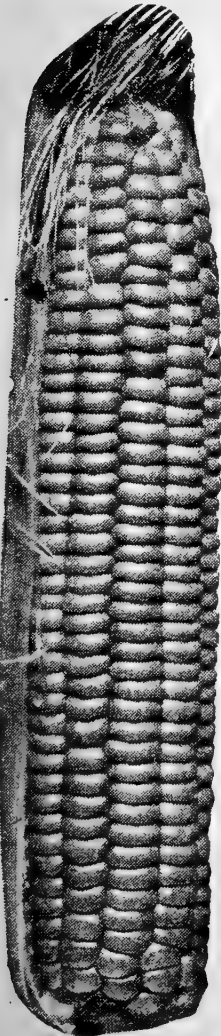

The best known standard main crop sweet corn, excelling all others. Ears 8 inches long 16 to 20 rowed. Very productive. Kernels clear, white, deep, medium width, sugary and tender. No. 287— $\frac{1}{4}$ lb., 15c; $\frac{1}{2}$ lb., 22c; 1 lb., 38c; 3 lbs., \$1.05. Postpaid.

COUNTRY GENTLEMAN

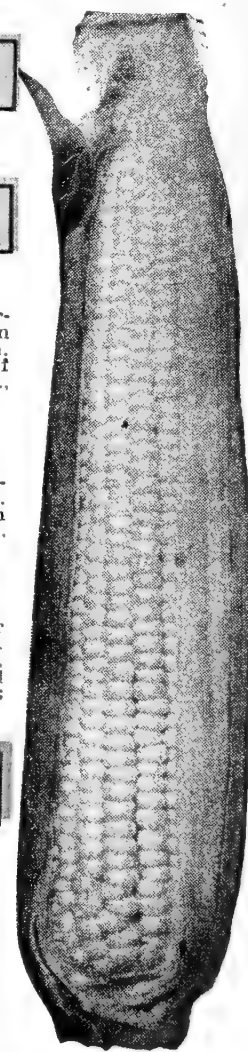

One of the best known late varieties, superior for home and market gardens and commercial canners. Stalks often with two ears. Ears 7 to 8 inches long, with narrow irregular grains of good quality, sweet and tender. No. 284— $\frac{1}{4}$ lb., 15c; $\frac{1}{2}$ lb., 22c; 1 lb., 38c; 3 lbs., \$1.05. Postpaid.

White Corn Collection**A FAVORITE SELECTION**

$\frac{1}{4}$ lb. Golden Evergreen Sweet Corn, $\frac{1}{4}$ lb. Stowell's Evergreen Sweet Corn and $\frac{1}{4}$ lb. Country Gentleman Sweet Corn. Regular Catalogue Value 45c. Order No. 296 White Corn collection 35c postpaid.

Golden Bantam

Early Evergreen

Heavy Bearing

FULL FLAVORED

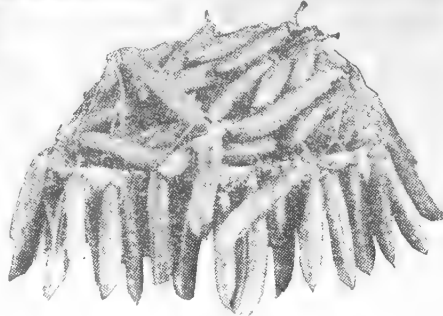

PEAS

EXTRA EARLY PEAS

No. 454—**MARDELAH**. Something different in an extra early pea. Produces peas for the table or canning in 53 days. Exceptionally sweet and tender. Wilt resistant. Postpaid: ¼ lb., 14c; ½ lb., 20c; 1 lb., 30c; 3 lbs., 95c.

No. 455—**ALASKA WILT RESISTANT**. Extra early. Smooth seeded pea, ready to use in 53 days. Ideal for first market and home garden use. An old reliable variety. Postpaid: ¼ lb., 14c; ½ lb., 20c; 1 lb., 30c; 3 lbs., 95c.

No. 456—**FIRST AND BEST**. This variety is one of the earliest peas known for early market. 54 days. Seed round, white to whitish green and smooth. Postpaid: ¼ lb., 14c; ½ lb., 20c; 1 lb., 30c; 3 lbs., 95c.

Little Marvel

**INOCULATE
PEA SEED,
SEE
PAGE 38**

FAMOUS LITTLE MARVEL

No. 463—**LITTLE MARVEL**. 18 inch—63 days to picking. The home gardener's favorite in the Middle West. Excellent quality and high yielding ability. This pea produces when many varieties fail. Postpaid: ¼ lb., 15c; ½ lb., 24c; 1 lb., 40c; 3 lbs., \$1.05.

HOW TO GROW PEAS

Plant as early as anything in garden. Light freezing does not hurt Peas. In the South plant two crops—early spring and fall; in the north make successive plantings about one week apart. Peas will grow on poorer soils than most crops. Smooth varieties are hardiest, wrinkled varieties of finest quality. Plant about 1 inch apart, 3 inches deep. 1 pound will drill 50 feet of row. You can double row peas about 8 inches apart spacing between double rows about 36 inches.

MID-SEASON PEA VARIETIES

No. 468—**EVERBEARING**. 28 inch, 75 days. A long bearing, large seeded variety for home and market gardens. Wilt resistant and hardy with a superior flavor. A very popular mid-season variety. Postpaid: ¼ lb., 15c; ½ lb., 24c; 1 lb., 40c; 3 lbs., \$1.05.

No. 471—**TALL TELEPHONE OR ALDERMAN**. A climbing or pole pea grows to 5 ft. Ready for table use in 74 days. A handsome large podded variety. Excellent for home and market gardens. Wilt resistant. Pods contain 8 to 10 large peas of highest quality. The best tall pea. Postpaid: ¼ lb., 15c; ½ lb., 24c; 1 lb., 40c; 3 lbs., \$1.05.

No. 474—**WHITE EYED MARROWFAT**. 5 foot, 30 days. A leading variety for dry use. Very good for pea soup. Large, round, creamy white seed of delicious flavor. Wilt resistant and very productive. Postpaid: ¼ lb., 14c; ½ lb., 20c; 1 lb., 35c; 3 lbs., 95c.

TABLE FIELD PEAS

Table peas in this group make a fine edible product when cooked and seasoned. Save the dry peas for later use. Store in a dry and cool place.

No. 479—**CALIFORNIA BLACK EYE**. Dwarf or half runner. 95 days. Much more productive than the old type. Postpaid: ¼ lb., 14c; ½ lb., 20c; 1 lb., 35c; 3 lbs., 95c.

No. 480—**BROWN CROWDER**. Vining type. Matures in 105 days. The most popular sugar crowder pea. Long round pods. Postpaid: ¼ lb., 17c; ½ lb., 30c; 1 lb., 50c; 3 lbs., \$1.35.

BERRY'S FAVORITE PEA COLLECTIONS

An early all season pea collection. Plant these four outstanding varieties on the same day and have a succession of peas for table, canning and freezing. They will mature in the order listed.

No. 450—¼ lb. Alaska, W. R.; ½ lb. Little Marvel; 1 lb. Fillbasket; 1 lb. Everbearing.
2 lbs.—4 varieties only 75c.

Save money on peas. Our stock is Western grown and will produce peas of unsurpassed flavor.

SPERGON Seed Protectant

A powder to be applied to seed before planting to prevent seed decay and "Damping-off," particularly in cold wet weather. Recommended for Peas, Beans, Lima Beans, Corn and other seeds, it is easy to apply to the seed and noninjurious to the user. **NON-TOXIC**. Postpaid: 1 oz. envelope 25c; 5 oz. container \$1.00; 1 lb. container \$2.25.

SYNDEET, DDT Insecticide

An improved insecticide containing 30% DDT for the control of Codling Moth, Boxwood Miners, Thrips, Flea Beetles, Colorado Potato Beetles, Aphids, European Corn Borer, European Red Mites and Rose Chafers. 8 oz bottle \$1.00; 1 qt. can \$3.00 postpaid.

DUST-SPRAY Insecticide Fungicide

An outstanding, ready mixed formulation to simplify pest control. Use as a dust or spray. Recommended for Roses, Fruit Trees, Tomatoes, and Beans. Contains PHYGON, SULPHUR, DDT AND ROTENONE. Postpaid: 1 lb. container \$1.00; 5 lb. bag \$4.00.

CHOICEST EARLY PEAS

No. 459—**AMERICAN WONDER**. 12 inch—63 days to picking. A good reliable early variety. A favorite of many home gardeners for years. A very heavy bearer. Postpaid: ¼ lb., 15c; ½ lb., 24c; 1 lb., 40c; 3 lbs., \$1.05.

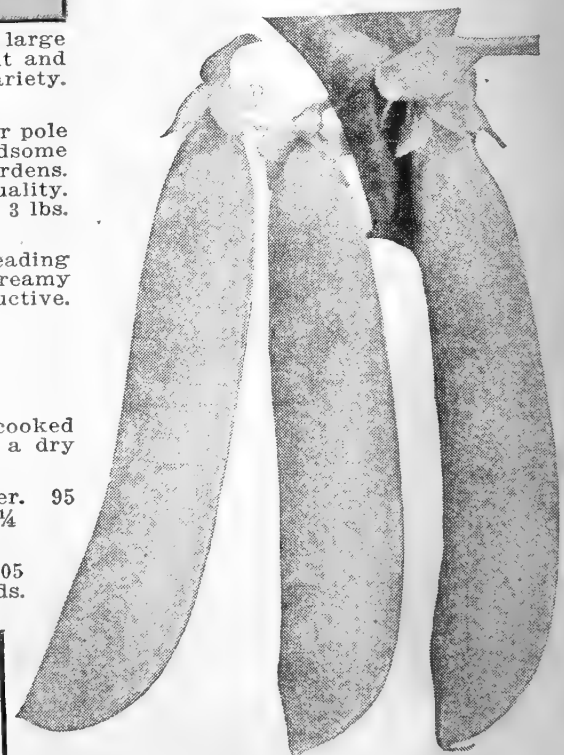

No. 457—**PREMIUM GEM**. 24 inch—66 days to picking. We think this the best of the Gem Peas. Early, and with the fine sugar flavor usually found in later varieties. Reliable for the home garden. Postpaid: ¼ lb., 15c; ½ lb., 24c; 1 lb., 40c; 3 lbs., \$1.05.

No. 460—**THOMAS LAXTON**. 30 inch—61 days to picking. A very popular home garden variety in the East and South. Fine for canning or market garden. Large and sweet flavored, an exceptional yielder. Postpaid: ¼ lb., 15c; ½ lb., 24c; 1 lb., 40c; 3 lbs., \$1.05.

No. 478—**LAXTON PROGRESS**. 15 inch—64 days to picking. A standard early variety for market and home gardens. Large podded, large seeded. A good variety for freezing or home canning. Postpaid: ¼ lb., 15c; ½ lb., 24c; 1 lb., 40c; 3 lbs., \$1.05.

No. 465—**FILLBASKET**. 24 inch—70 days. Pods 3 to 3½ inches long, slender and straight. Excellent for home gardens, canning or freezing. Postpaid: ¼ lb., 15c; ½ lb., 24c; 1 lb., 40c; 3 lbs., \$1.05.

No. 476—**DWARF GREY SUGAR OR EDIBLE POD**. Grows 2 to 2½ feet tall—65 days. A sweet, tender, and delicious edible podded variety that is very productive and wilt resistant. Small, smooth, sweet flavored. Postpaid: ¼ lb., 15c; ½ lb., 24c; 1 lb., 40c; 3 lbs., \$1.05.

Fillbasket

See page 51 for spraying and dusting equipment.

PHYGON-XL Fungicide

Controls all Leaf Blights and Fruit Rot of Tomatoes, Black Spot of Roses, Apple Scab and many other plant diseases caused by fungi. A seed protectant to be dusted on Beet, Tomato, Spinach, Swiss Chard, Peppers and other seeds, before planting to prevent seed decay and "damping-off." Postpaid 2 oz. can 50c; 4½ oz. container \$1.00; 1 lb. container \$2.70.

PHYGON Rose Dust

A dust containing Phygon, an outstanding fungicide for Black Spot and Mildew control; also DDT for insect control. Postpaid 1 lb. container 75c; 5 lb. container \$3.00.

Berry's FULL FLAVORED MUSKMELONS

Early Hackensack

Muskmelons are rich in vitamins—an excellent health food. They thrive under varied conditions and soils. Plant in hills six feet apart each way or if in drills, have six feet between rows and thin plants to 12 inches in the row. Plant thick and thin out after plants are up. The average family needs at least 1 ounce which will plant 100 hills or drill 200 feet of row.

SALMON FLESHED

407 BENDERS SURPRISE—90 days. An extra large, deliciously flavored melon weighing about 7 pounds. Skin hard and greenish yellow when ripe. Flesh is thick and bright salmon colored. The best of the big muskmelons. You'll really enjoy this one. We could tell you much more about this melon than space permits, but we know that if you plant it, you'll re-order this same variety again next year. Postpaid: Pkt. 5c; oz. 25c; ¼ lb. 80c; ½ lb. \$1.40; 1 lb. \$2.40.

420 HALE'S BEST #36—80 days. An outstanding shipping and market variety. Fruits 3 to 4 pounds. Very thick, deep salmon colored flesh with a sweet aromatic flavor, and fine texture. The most popular muskmelon grown. Again we have a splendid variety here, which is very well liked among those who have planted them previously. Postpaid: Pkt. 5c; oz. 25c; ¼ lb. 80c; ½ lb. \$1.40; 1 lb. \$2.40.

414 IMPERIAL #45; Mildew Resistant—87 days. A Hales Best type with resistance to powdery mildew. A good keeper after ripening. A melon with unusual qualities. Thick, sweet, orange flesh. You're due for a pleasant surprise if you order this variety. Of course, if you've planted it previously, you already know its quality goodness. Postpaid: Pkt. 5c; oz. 25c; ¼ lb. 80c; ½ lb. \$1.40; 1 lb. \$2.40.

411 HONEY ROCK—81 days. All American winner in 1933. Has been most popular for the home garden since. Very early, weighs about 4 lbs., flesh thick and very sweet. You've probably heard a lot about this melon as many people say it is second to none. Postpaid: Pkt. 5c; oz. 25c; ¼ lb. 80c; ½ lb. \$1.40; 1 lb. \$2.40.

413 HOODOO (Hearts of Gold) 90 days. Fruits round, about 3 pounds. Very small seed cavity. Tender, juicy, sweet with delightful flavor. A superior home garden melon. This is another of our choice varieties and should not be overlooked in making your selection. Postpaid: Pkt. 5c; oz. 25c; ¼ lb. 80c; ½ lb. \$1.40; 1 lb. \$2.40.

418 OSAGE, or Miller's Cream—95 days. The finest flavored "Queen" of salmon fleshed melons. Exceptionally thick, tender and sweet flesh. Oval shaped fruits about 5½ lbs. A superb home garden variety. This is truly a wonderful melon and is considered in a class by itself. Don't overlook this one. Postpaid: Pkt. 5c; oz. 25c; ¼ lb. 80c; ½ lb. \$1.40; 1 lb. \$2.40.

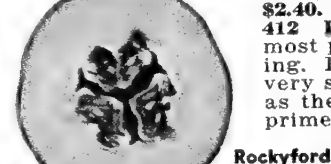

415 BANANA MELON. A long variety tapering at both ends. Skin is lemon color, when mature. Pink flesh, delicious eating quality. Weight 5 to 7 pounds. Many insist that there is none better. If you've never planted this variety before, be sure to do so this year. Postpaid: Pkt. 5c; oz. 25c; ¼ lb. 80c; ½ lb. \$1.40; 1 lb. \$2.40.

Hale's Best

GREEN FLESHED

417 GOLD LINED ROCKY FORD. In delicious flavor, Gold Lined far excels the regular Rocky Ford. It is slightly longer and a few days later. Oval in shape, small seed cavity. Flesh thick and firm. Include this variety in your group as it, too, is a fine melon. Choice quality. Postpaid: Pkt. 5c; oz. 25c; ¼ lb. 80c; ½ lb. \$1.40; 1 lb. \$2.40.

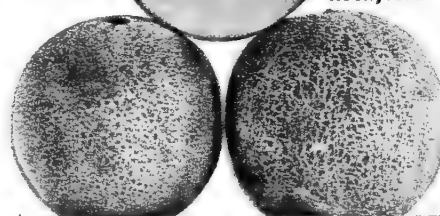

Rockyford

412 EXTRA EARLY HACKENSACK—80 days. A most popular variety for home use and truck gardening. Fruits large, globular flattened. Flesh is thick, very sweet and spicy. This variety is equally as good as the best and is known among melon raisers as a prime favorite. Postpaid: Pkt. 5c; lb. 25c; ¼ lb. 80c; ½ lb. \$1.40; 1 lb. \$2.40.

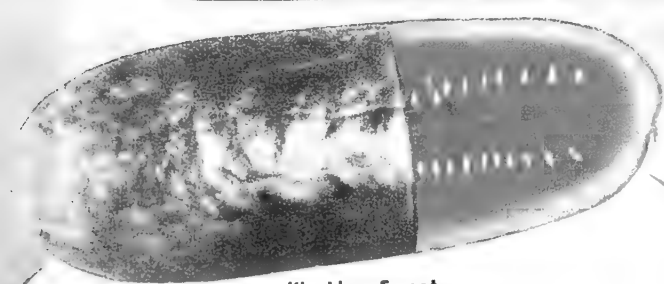

401 SELECT ROCKY FORD—92 days. Probably the most widely grown cantaloupe. Almost round. Green flesh of delicious flavor. Fruits weigh about 2½ pounds. You can plant this melon with our assurance of its goodness and delightful taste. You will not be disappointed. Postpaid: Pkt. 5c; oz. 25c; ¼ lb. 80c; ½ lb. \$1.40; 1 lb. \$2.40.

403 HONEY DEW—112 days. Green fleshed fruits 7"x8", skin smooth, hard and creamy white, flesh very thick, sweet, juicy and distinctly flavored. A good keeper. Those who enjoy melons at their best, can be assured of satisfaction in this particular variety. Postpaid: Pkt. 5c; oz. 25c; ¼ lb. 80c; ½ lb. \$1.40; 1 lb. \$2.40.

BERRY'S SWEET JUICY

Watermelons

Kleckley Sweet

Plant in hills about 8 feet apart each way. Don't disturb the vines after they start to run. Don't plant until ground is warm and cover only about 1 inch. Because of long growing season required in northern states, plant only early varieties.

368 IMPROVED KLECKLEY SWEET. Finest melon for home and market gardens. An improved type of the old popular strain; larger and wilt-resistant. This particularly variety enjoys a place high in the preference of many melon raisers. Medium early, dark green skin, with bright red flesh, very tender and melting. Postpaid: Pkt. 5c; oz. 20c; ¼ lb. 60c; ½ lb. \$1.00; 1 lb. \$1.75.

370 GEORGIA RATTLESNAKE. A large long melon, striped light and dark green. Rind rather thick, flesh red of good quality. This melon has an unusually good taste. It will stand up well. If you are planting a variety, don't pass this one by. Very prolific and drought resistant. Postpaid: Pkt. 5c; oz. 20c; ¼ lb. 60c; ½ lb. \$1.00; 1 lb. \$1.75.

352 HALBERT'S HONEY. One of the best for home and local market; not a good shipper. This melon is sweeter than many, and for that reason, it is a steady favorite. Color dark green. Thin rind, rich, red sugary flesh of fine texture. Postpaid: Pkt. 5c; oz. 20c; ¼ lb. 60c; 1 lb. \$1.75.

374 DIXIE QUEEN. A recent introduction of finest quality. Early, it attains an average size of 15x12½ inches, weight 32 pounds. As the name implies, this really is a Queen in its class. The predictions for it to become an everlasting favorite, are definitely coming true. Color light green, striped with darker green. Flesh, dark pink with very few seeds—white. Deliciously flavored. Postpaid: Pkt. 5c; oz. 25c; ¼ lb. 70c; ½ lb. \$1.25; 1 lb. \$2.00.

358 SWEETHEART. Vines vigorous and productive. Fruits large, oval. Rind thin, flesh bright red, firm, sweet and tender. Many prefer this melon because of its fine shipping qualities. Stands up exceptionally well. Postpaid: Pkt. 5c; oz. 20c; ¼ lb. 60c; ½ lb. \$1.00; 1 lb. \$1.75.

376 EARLY KANSAS RED SEEDED. A remarkably early melon for its large size. This melon will qualify with top honors among some of the very best varieties. Postpaid: Pkt. 5c; oz. 20c; ¼ lb. 60c; ½ lb. \$1.00; 1 lb. \$1.75.

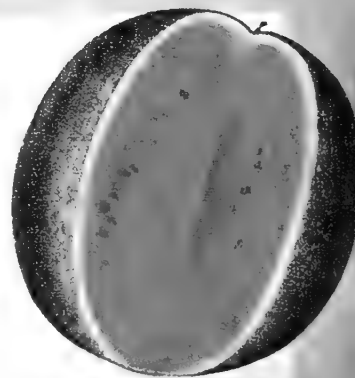

354 EARLY CANADA—75 days. A new Icebox size 11x11 inches, 10 pounds. The finest quality in an early melon. Brown seeds, red flesh. Really an outstanding variety for home gardens and local markets. Postpaid: Pkt. 5c; oz. 20c; ¼ lb. 60c; ½ lb. \$1.00; 1 lb. \$1.75.

353 COLES EARLY—75 days. A leading home garden variety for the North. Weight about 20 pounds. Red flesh. Black seeds. If you've never planted this melon before, be sure to give it a try this year. Postpaid: Pkt. 5c; oz. 20c; ¼ lb. 60c; ½ lb. \$1.00; 1 lb. \$1.75.

349 NEW ICE BOX. 65 days. A small early variety. Weighs about 10 pounds. Recently introduced as a novelty which can be kept in a home refrigerator, without cutting. Rind rather thin. Light green with darker irregular stripes. Flesh sweet and red. Postpaid: Pkt. 10c; oz. 30c; ¼ lb. 90c; ½ lb. \$1.50.

348 Same as above except White Fleshed.

375 MIXED. Finest for the Boy's Melon Patch. Old favorite varieties—something to please everybody. 45c for ¼ lb. Will pay big returns. Will plant 120 hills of about 15 varieties. Postpaid: Pkt. 5c; oz. 15c; ¼ lb. 45c; ½ lb. 80c; 1 lb. \$1.50.

New Ice Box

Dixie Queen

DELICIOUS WATERMELONS Cont.

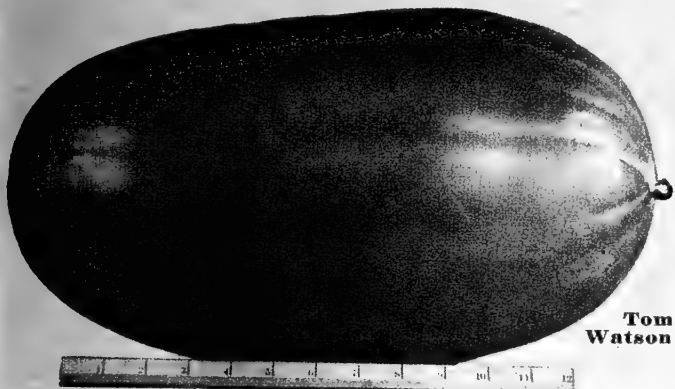

355 Hawkesbury. 85 days. A wilt-resistant, long, light gray melon with very good shipping qualities. About 35 pounds. Black seed, dark pink, good quality flesh. Postpaid: Pkt., 5c; oz., 20c; ¼ lb., 60c; ½ lb., \$1.00; 1 lb., \$1.75.

360 Tom Watson. Very popular shipping melon of the long type. Early; keeps well. Flesh bright red of excellent flavor. Postpaid: Pkt., 5c; oz., 20c; ¼ lb., 60c; ½ lb., \$1.00; 1 lb., \$1.75.

369 Golden Honey. Dark green, medium sized, long oval shape. Cream colored flesh which is very tender and delicious. Postpaid: Pkt., 5c; oz., 25c; ¼ lb., 75c; ½ lb., \$1.25; 1 lb., \$2.00.

Berry's RICH, MEATY, HEAVY FRUITING

TOMATOES

Extra Early Varieties

The varieties in this group have been developed for Extra early production of good sized fruit. They all yield very heavy crops on small stocky plants. They need no pruning since the plants are of dwarf type. If you live in the Great Plains area, from North Dakota and Montana to Texas, these varieties will grow best for you. If you have limited space and want neat compact tomato plants that really produce, order some of these varieties.

654 Bison. 63 days. This variety has proved through the years that tomatoes can be grown in a short but hot dry season. Deep scarlet, meaty, very few seeds. Pkt., 10c; ½ oz., 30c; oz., 50c; ¼ lb., \$1.00, postpaid.

658 Victor or Bounty. 65 days. A new variety from North Dakota. Bears a huge crop of large smooth globe shaped fruit on a small sturdy plant. Actual counts have shown more than fifty fruits on a plant at one time. The fruit are scarlet and without green core or green top. Pkt., 10c; ½ oz., 35c; oz., 60c; ¼ lb., \$2.25, postpaid.

649 Sioux. 65 days. One of the best early varieties. Fruit large, smooth, attractive, red in color and meaty. Vines have a spread of 4 to 6 feet. Foliage remains in good condition throughout the season. Pkt., 10c; ½ oz., 35c; oz., 60c; ¼ lb., \$2.25, postpaid.

"Earliana"

655 The old standby for many gardeners. 65 to 70 days from planting to eating, a heavy yielder of fair sized, red fruit of good quality. This is a safe early variety that has proved its worth to thousands of gardeners for many years. Our Earliana seed is an improved strain that will please you. Pkt., 10c; ½ oz., 30c; oz., 45c; ¼ lb., \$1.75, postpaid.

Special Favorites!

679 Golden Queen—84 days. A main crop; large, smooth, bright yellow tomato. Good for home gardens. Medium sized plants. Fruit are solid and of mild flavor. Pkt., 10c; ½ oz., 40c; oz., 70c; ¼ lb., \$2.25, postpaid.

670 White Beauty. Many feature this variety as "Snowball." An ivory white tomato with paper white flesh. As big as Ponderosa with few seeds and no acid. Pkt., 10c; ½ oz., 50c; oz., 90c, postpaid.

648 Orange Jubilee—72 days. Orange yellow in color. It is novel in appearance and makes a delicious juice of attractive color. Vines short stemmed, requiring small growing space. Fruit thick walled with few seeds. Pkt., 10c; ½ oz., 40c, postpaid.

641 Garden State. Developed by Campbell Soup Company. Resistant to wilt and late blight. Fruit globe shaped and attractive in color and size. Mild flavor. Pkt., 10c; ½ oz., 35c.

Rutgers

New Hybrid

New Hybrid

644 75 days. This new Hybrid Tomato will really produce. In our trial grounds last year it was one of our most outstanding varieties. The yield was excellent. Fruits medium size, meaty and firm. Very good quality. Just enough foliage to keep fruits from sunburning. Packet 25c.

LATE OR MAIN CROP

No. 666—GIANT IMPROVED PONDEROSA—the largest tomato developed to date. Our seed has been triple tested, in laboratory greenhouse and trial grounds, in removing the roughness and splitting tendency from this giant of all tomatoes—a favorite of thousands. Almost seedless, making it fine for slicing. Vines are vigorous and productive, fruits large, oblong-purplish red, thin skinned and solid. Recommended for superior flavor. Pkt., 10c; ½ oz., 40c; oz., 65c, postpaid.

No. 663—NEW STONE. An old reliable home garden type. Very productive, fruits large, smooth, attractive scarlet-red of fine flavor. Pkt., 10c; ½ oz., 25c; oz., 35c; ¼ lb., \$1.00, postpaid.

No. 671—OXHEART. A distinctively attractive variety, entirely different from any other tomato. Increasing in popularity each year because of its very solid meaty fruits of a delicious sub-acid flavor, almost seedless, the fruit grows extremely large and heart shaped. Flesh is pink. A favorite of thousands for the home garden. Pkt., 10c; ½ oz., 45c; oz., 85c, postpaid.

Small Fruited Varieties

No. 657 Red Cherry
No. 659 Red Pear.
No. 667 Yellow Plum.
No. 673 Yellow Pear.
No. 677 Small fruited Mixed.
No. 669 Ground Cherry.
10c per packet postpaid.

No-Seed

Hormone Blossom-Set. Keeps blossoms from falling, produces ripe tomatoes weeks earlier; greater yield, better tasting. SEEDLESS. Just spray the blossoms. Complete instructions on bottle. Two fluid oz. (Makes ½ gallon) 60c.

Oxheart

Intermediate or Second Early Sorts

664. Rutgers. The outstanding new variety in its class. Really an improved Marglobe, maturing a little earlier and being a heavier yielder. It ripens from the inside out to a uniform bright scarlet color. Thrives under more unfavorable conditions than other varieties. Pkt., 10c; ½ oz., 25c; oz., 40c; ¼ lb., \$1.20; ½ lb., \$2.00.

665. Marglobe. A most popular all purpose variety, very vigorous and productive, disease resistant. Uniformly large solid fruits, bright scarlet of finest quality and flavor. Pkt., 10c; ½ oz., 25c; oz., 40c; ¼ lb., \$1.20; ½ lb., \$2.00, postpaid.

675. Beefsteak. 80 days. The largest scarlet red tomato. The vines produce an abundance of extra large sized fruits. Flesh juicy, solid and has a rich sub-acid flavor. Pkt., 10; ½ oz., 45c; oz., 75c, postpaid.

RADIANCE COSMOS

Winner of the highest award in the 1948 All American trials, Radiance introduces two entirely new colors. Striking deep rose and rich crimson. The first bi-color Cosmos ever to be developed. Destined for immediate popularity in the nation's gardens. No. 1203—Pkt., 10c, Postpaid.

ELITE GOLDEN ACRE CABBAGE

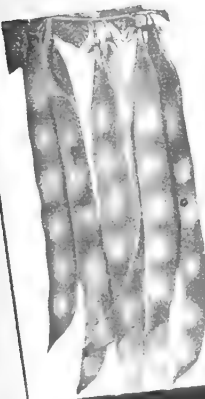

EXTRA FINE EARLY CABBAGE. We challenge you to beat this variety anywhere for earliness, quality and productiveness. A round head type cabbage that starts with a bang, heads in a hurry and is ready for the table before most kinds curl up its center leaves. Rich flavor. Grows compact so may be planted closer together. No. 178—Pkt., 15c; ½ oz., 20c; oz., 35c; ¼ lb., \$1.00, Postpaid.

GREAT LAKES LETTUCE

A HOME GARDEN VARIETY that will really stand up, and will produce hard heads in hot weather. The heads are of medium size, attractive deep green with thick crisp leaves folding over the heads. Remains in condition long after forming. Resistant to tip burn. All American Selection—1944. No. 339—Pkt., 15c; oz., 50c; ¼ lb., \$1.75, Postpaid.

RIVAL BEANS

A NEW GREEN POD BUSH. This splendid bean, developed by the United States Dept. of Agriculture, will yield well under adverse conditions and is resistant to common bean mosaic. Pods 6 to 7 inches long, fine textured flesh, medium dark green smooth round straight and stringless, matures in 50 days. Fine for home or market gardens, canning or quick freezing. No. 108—Pkt., 15c; ½ lb., 35c; 1 lb., 65c; 2 lb., \$1.20, Postpaid.

NEW BEAUTY RADISH

CRISP SNAPPY RADISHES READY TO EAT IN 21 TO 23 DAYS. An extra special strain of short top scarlet globe. Very uniform. We consider it our best early radish. Buy enough for a succession of planting and enjoy fresh radishes all summer. No. 520—Pkt., 15c; oz., 20c; ¼ lb., 70c; ½ lb., \$1.25; 1 lb., \$2.00, Postpaid.

TENDER SWEET CARROT

Because of its fine quality this undoubtedly is the best carrot for the home gardens and is also popular as a topped carrot for the market. Deep orange color throughout, coreless, cylindrical in shape. The top is strong and suitable for bunching. Flesh fine grained. Be sure to try it! No. 211—Pkt., 15c; ½ oz., 25c; oz., 40c; ¼ lb., \$1.25; 1 lb., \$3.50, Postpaid.

NEW EARLY GOLD SWEET CORN

OUR BEST EARLY YELLOW. 70 days from planting. Uniform ears, 7 inches long. Bright yellow kernels, 12 rows, stocks six feet high. Our best for home and market gardens. Plan on planting some of this variety and be the first in your neighborhood to have quality sweet corn for your table. We recommend this variety for canning or freezing. No. 280X—Pkt., 15c; ½ lb., 35c; 1 lb., 65c; 2 lb., \$1.20, Postpaid.

EXTRA EARLY WONDER BEET

A BEET OF TRULY SUPERIOR QUALITY. An early variety of deep blood red color. A selection of equally superior quality for table, canning and pickling. Smooth globe shaped roots with short tops. Extra sweet and crisp. It matures quickly but is a splendid keeper. If you want the best try this one. It will be a favorite among all others. No. 156—Pkt., 10c; oz., 25c; ¼ lb., 90c; 1 lb., \$2.50, Postpaid.

SUPREME WONDER PEAS

EXTRA EARLY LARGE. One of the most popular home garden and freezing varieties unsurpassed for quality. Vines are about 18 inches high, large, almost round, large, appealing green color. You have never tasted peas so tender, so sweet, so delicious. Plant at least two pounds at different times so you will have plenty for canning or freezing. No. 464—Pkt., 15c; ½ lb., 28c; 1 lb., 48c; 2 lb., 90c, Postpaid.

1 Pkt. each of the above 11 Varieties, \$1.65 Value for \$1.39, Postpaid. Order No. 52x.

A WIDE VARIETY OF *Choicest* FOODS

ASPARAGUS

102 PARADISE. A sensational new and early asparagus. Producing a normal crop one year earlier than any other. A heavier yielder. Postpaid: Pkt. 10c; oz. 35c; ¼ lb. \$1.35; ½ lb. \$2.60; 1 lb. \$4.90.

Paradise

CAULIFLOWER

220 EARLY SNOWBALL. 54 Days. Most widely used early variety, especially valuable for market. Dwarf habit. A sure header, medium size. Delicious, white and tender. Postpaid: Pkt. 10c; ¼ oz. 75c; ½ oz. \$1.25; oz. \$2.00.

Early Snowball

CRISP CELERY

251 WHITE PLUME. Earliest of all. A favorite for the table because of crisp tender quality. Stalks are uniformly large and solid. Pkt. 10c; ½ oz. 30c; oz. 50c; ¼ lb. \$1.75.

253 GIANT PASCAL. An excellent variety for fall and winter use. Large, thick, crisp, stringless stalks with a delicious nut-like flavor. Blanches to a beautiful yellowish-white. Postpaid: Pkt. 10c; ½ oz. 25c; oz. 45c; ¼ lb. \$1.60.

252 GOLDEN SELF-BLANCHING. Most desirable for truckers. Stalks heavier than white varieties blanching into a rich golden yellow. Fine quality, crisp, tender, free from strings. Postpaid: Pkt. 10c; ½ oz. 30c; oz. 50c; ¼ lb. \$1.75.

255 CELERIAC OR TURNIP-ROOTED CELERY. Roots nearly globe-shaped, are used for flavoring soup, stews, etc. Postpaid: Pkt. 10c; ½ oz. 25c; oz. 45c; ¼ lb. \$1.50.

White Plume Celery

Berry's Finest Table Beets

Beets should be planted both in Spring and Fall. Will keep fine stored in pit or may be canned. ½ ounce will plant 25 feet of row. Plant about 1 ½ inches deep about 2 inches apart in row. Make several plantings about one week apart. Average person requires 10 pounds per year.

154 EARLY BLOOD TURNIP. Excels in flavor and appearance. A medium early variety, roots top shaped, dark red, retaining color even when cooked. Sweet and crisp. Matures quickly but is a splendid keeper. Postpaid: Pkt. 5c; oz. 25c; ¼ lb. 70c; ½ lb. \$1.10; 1 lb. \$2.00.

168 DETROIT PERFECTED. A superb beet that is tender and sweet at all stages of growth. This is an improvement over Detroit Dark Red. Smooth, globe shaped with small top root and beautiful dark red flesh, splendid for dicing. An All-American Selection. Postpaid: Pkt. 5c; oz. 25c; ¼ lb. 70c; ½ lb. \$1.10; 1 lb. \$2.00.

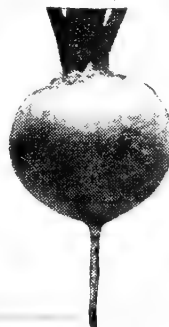

155 CROSBY'S EGYPTIAN. An extra early variety preferred by market gardeners, splendid for bunching. Roots globe shaped, slightly flattened, with small tap root. Finest quality, tender and sweet. Flesh purplish-red. Postpaid: Pkt. 5c; oz. 25c; ¼ lb. 70c; ½ lb. \$1.10; 1 lb. \$2.00.

157 DETROIT DARK RED. The outstanding variety for home use, truck gardeners, and canning. Fine quality, tender and sweet. Roots perfectly round. With small tap root, uniform. Flesh dark red with slight zone. Postpaid: Pkt. 5c; oz. 20c; ¼ lb. 65c; ½ lb. \$1.00; 1 lb. \$1.90.

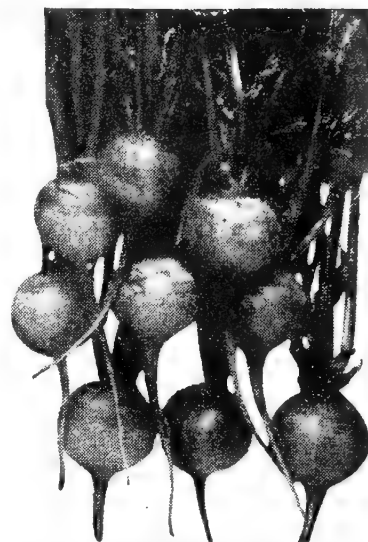

167 EARLY WONDER. This wonderful early beet is the result of years of reselecting and improving. For earliness it can't be beat. Very uniform in growth, root globular in shape. Postpaid: Pkt. 5c; oz. 20c; ¼ lb. 65c; ½ lb. \$1.00; 1 lb. \$1.90.

158 SWISS CHARD. Makes continuous greens of delicious flavor throughout the summer. Grows anywhere. Plant from early spring till July. Postpaid: Pkt. 5c; oz. 20c; ¼ lb. 65c; ½ lb. \$1.00; 1 lb. \$1.90.

159 SWISS CHARD—FORD-HOOK GIANT. This variety is more popular every year. Grows larger than common Swiss Chard, and has exceptional fine quality and flavor. Postpaid: Pkt. 5c; oz. 20c; ¼ lb. 65c; ½ lb. \$1.00; 1 lb. \$1.90.

Detroit Dark Red

Early Wonder Beet

MANGELS & SUGAR BEETS

Mangels are very easily grown. A loose or sandy loam type of soil is best to grow mangels on. Drill about 6 pounds of seed per acre in rows 2 feet apart. Cultivate right after planting down the drill row.

The following 3 varieties postpaid: oz. 20c; ¼ lb. 60c; ½ lb. 95c; 1 lb. \$1.75.

162 MAMMOTH LONG RED. Heaviest yielding and largest of mangels. Flesh pink tinged.

160 GOLDEN TANKARD. Very large size and easily lifted. Skin deep orange, flesh yellow with white zones.

166 GIANT HALF SUGAR. Heavy yielder, valuable for feeding. Flesh white, with good sugar content. Grows half out of the ground, making easy to harvest.

165 KLEIN WANZLEBEN. Our best sugar beet. Extremely rich in sugar, flesh fine grained. Postpaid: Pkt. 5c; oz. 20c; ¼ lb. 60c; ½ lb. 90c; 1 lb. \$1.60.

New Eating Pleasure from Your Garden

RHUBARB CHARD

A strong growing Swiss Chard that looks like Rhubarb. Leaves and stalks

Rhubarb Chard

are both wholesome and nutritious. Keep using the outer leaves and the inner ones will continue to grow so that you will have a continuous supply of chard throughout the summer and fall. **CULTURE:** Same as Swiss Chard. **No. 163** Postpaid: Pkt. 5c; oz. 25c; ¼ lb. 75c.

CELTUCE

Celtuce is a form of lettuce combining the uses and flavors of both celery and lettuce. While grown chiefly for its large and succulent stalks (to be eaten raw or cook) the leaves of the young plants are used as lettuce or as boiling greens. **CULTURE:** Sow the seed thinly outdoors in the spring as soon as the weather becomes settled, in rows 18 to 24 inches apart. Cover seed with ¼ inch of fine soil. **No. 256** Pkt. 10c; oz. 65c.

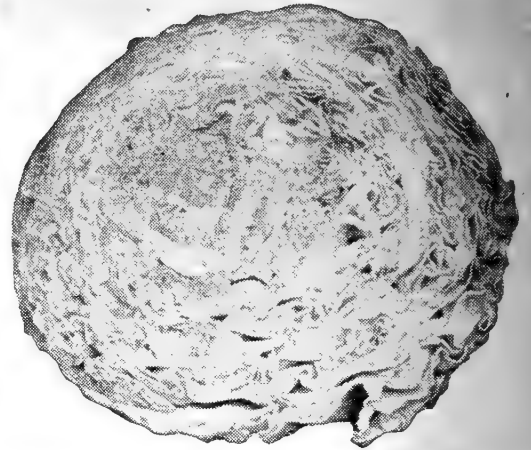

Celtuce

HEALTH GIVING FOODS AT LOW COST

CABBAGE

Golden Acre

Early Flat Dutch

Cabbage is of vital importance for our health and nutrition. Rich in vitamins when eaten raw. Can be grown over a long season. Plant seed in hills for planting outdoors, as early as possible. Cover lightly about $\frac{1}{2}$ inch. Plant both early and late varieties. One person needs about 50 pounds a year. Used more often in a health diet than any other vegetable except potatoes and tomatoes.

One ounce contains about 5000 seeds. It is very economical to grow your plants, and have a few extra to sell to your neighbors. Cabbage plants are easy to start.

EARLY CABBAGE VARIETIES

179 GOLDEN ACRE. A new variety, sure header; heads round and very solid, few outer leaves. Used by truckers for earliest markets. Postpaid: Pkt., 10c; $\frac{1}{2}$ oz., 20c; oz., 35c; $\frac{1}{4}$ lb., 95c; $\frac{1}{2}$ lb., \$1.60; 1 lb., \$3.00.

176 EARLY JERSEY WAKEFIELD. Small compact conical heads, broad base. Few leaves permitting close planting. A favorite of market gardeners and shippers. Postpaid: Pkt., 10c; $\frac{1}{2}$ oz., 25c; oz., 35c; $\frac{1}{4}$ lb., 95c; $\frac{1}{2}$ lb., \$1.60; 1 lb., \$3.00.

182 COPENHAGEN MARKET. Finest round-headed early cabbage. Heads uniform, solid, excellent quality. Few outer leaves. Short stem. Desirable likewise for early kraut. Postpaid: Pkt., 10c; $\frac{1}{2}$ oz., 20c; oz., 35c; $\frac{1}{4}$ lb., 95c; $\frac{1}{2}$ lb., \$1.60; 1 lb., \$3.00.

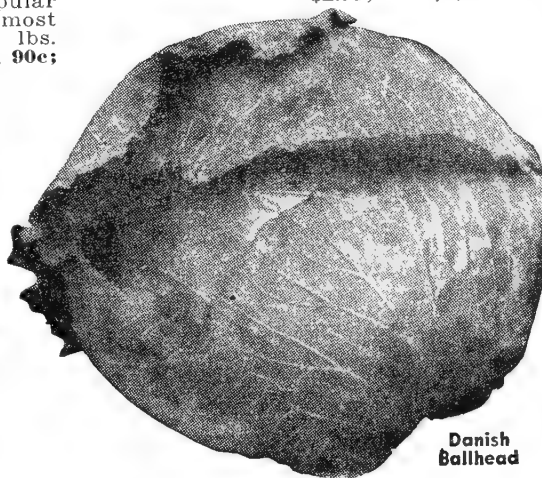

181 EARLY FLAT DUTCH. A strain popular with market and home gardeners. Heads almost round, good solid quality, weigh about 5 lbs. Postpaid: Pkt., 10c; $\frac{1}{2}$ oz., 20c; oz., 35c; $\frac{1}{4}$ lb., 90c; $\frac{1}{2}$ lb., \$1.60; 1 lb., \$3.00.

184 ALL SEASONS. Sure heading, very solid, for all purpose use. Earliest of the large cabbage. Withstands sun and dry weather. Postpaid: Pkt., 10c; $\frac{1}{2}$ oz., 20c; oz., 35c; $\frac{1}{4}$ lb., 90c; $\frac{1}{2}$ lb., \$1.60; 1 lb., \$3.00.

194 RED ROCK. The largest and best red cabbage. It is fine for slaw, pickling or boiled. A sure header, an excellent keeper. Postpaid: Pkt., 10c; $\frac{1}{2}$ oz., 30c; oz., 50c; $\frac{1}{4}$ lb., \$1.50; $\frac{1}{2}$ lb., \$2.50.

CELERY OR CHINESE CABBAGE

175 CELERY OR CHINESE CABBAGE. Most popular for the home garden. Cylindrical, tapering heads. Crisp and tender. Plant during July-August. Makes fine chicken feed. Easy to grow. Postpaid: Pkt., 10c; $\frac{1}{2}$ oz., 15c; oz., 25c; $\frac{1}{4}$ lb., 80c; $\frac{1}{2}$ lb., \$1.50; 1 lb., \$2.25.

Danish Ballhead

YELLOWS DISEASE RESISTANT CABBAGE

The most destructive and widespread cabbage disease found in all sections east of the Rocky Mountains. "Yellows" is caused by minute organisms living in the soil indefinitely that thrive on living cabbage plants. The only control is to grow varieties that have been developed and are proven to be "Yellows Resistant."

174 MARION MARKET. Heads are almost round, very solid. Similar to Copenhagen Market but about 10 days later. Postpaid: Pkt., 10c; $\frac{1}{2}$ oz., 30c; oz., 50c; $\frac{1}{4}$ lb., \$1.65; $\frac{1}{2}$ lb., \$2.75; 1 lb., \$4.50.

183 JERSEY QUEEN. 55 days. Selected from Jersey Wakefield with which it remains identical in type and season. Leaves smooth and dark green. Heads pointed small and compact, permitting close planting. Postpaid: Pkt., 10c; $\frac{1}{2}$ oz., 30c; oz., 50c; $\frac{1}{4}$ lb., \$1.65; $\frac{1}{2}$ lb., \$2.75; 1 lb., \$4.50.

190 WISCONSIN HOLLANDER. This strain was developed from Danish Ballhead and will produce solid heads even on "yellows" infested land. Postpaid: Pkt., 10c; $\frac{1}{2}$ oz., 30c; oz., 50c; $\frac{1}{4}$ lb., \$1.65; $\frac{1}{2}$ lb., \$2.75; 1 lb., \$4.50.

LATE CABBAGE VARIETIES

186 PREMIUM LATE FLAT DUTCH. Excellent for home and market garden use. Very solid, large, flat heads, 6 to 7 inches deep. High quality. Postpaid: Pkt., 10c; $\frac{1}{2}$ oz., 20c; oz., 30c; $\frac{1}{4}$ lb., 95c; $\frac{1}{2}$ lb., \$1.75; 1 lb., \$3.00.

187 DRUMHEAD SAVOY. Popular for its tasty flavor. Sweeter than ordinary cabbage. Has crinkled leaves. An excellent keeper. Postpaid: Pkt., 10c; $\frac{1}{2}$ oz., 20c; oz., 35c; $\frac{1}{4}$ lb., \$1.25; $\frac{1}{2}$ lb., \$2.00; 1 lb., \$3.50.

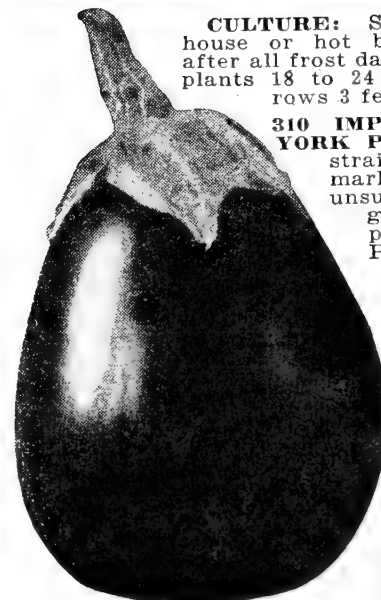

191 DANISH BALLHEAD. A superior variety, one of the finest late cabbages. 8 to 9 inches across. Desirable for shipping, storage, and kraut. Postpaid: Pkt., 10c; $\frac{1}{2}$ oz., 20c; oz., 35c; $\frac{1}{4}$ lb., \$1.25; $\frac{1}{2}$ lb., \$2.00; 1 lb., \$3.50.

EGG PLANT

CULTURE: Start plants in house or hot bed. Transplant after all frost danger is past. Set plants 18 to 24 inches apart in rows 3 feet apart.

310 IMPROVED NEW YORK PURPLE. Our strain of this leading market variety, is unsurpassed. Skin glossy black purple, flesh white. Postpaid: Pkt., 10c; $\frac{1}{2}$ oz., 35c; oz., 60c; $\frac{1}{4}$ lb., \$2.00; $\frac{1}{2}$ lb., \$3.75.

312 BLACK BEAUTY. Valuable to home gardeners and truckers for market. Ten days earlier than New York. Entirely spineless, sets fruit freely. Fruits are smooth, holding well after picking. Post-

New York Purple

paid: Pkt., 10c; $\frac{1}{2}$ oz., 35c; oz., 60c; $\frac{1}{4}$ lb., \$2.00; $\frac{1}{2}$ lb., \$3.75.

CARROTS for Summer and Winter

HIGH QUALITY TABLE CARROTS

Carrots are vital to health. Rich in Vitamin A, also B-1 and C. They have a wide variety of uses in meal plannings. Make rows not less than 15 inches apart and sow seed thinly about $\frac{1}{4}$ inch deep.

203 IMPERATOR. 77 days. An unusually fine variety. An All American Selection that does particularly well where soil is deep sandy loam. Roots are smooth slightly tapering to a stump-rooted tip, smooth, rich orange color, very little core, crisp, and of fine sweet flavor. Exceptionally attractive for bunching. Postpaid: Pkt., 10c; oz., 25c; $\frac{1}{4}$ lb., 75c; $\frac{1}{2}$ lb., \$1.40; 1 lb., \$2.50.

201 OXHEART. A short thick variety, best for heavy soil where it can be easily lifted. Roots orange-scarlet, about five inches in length; very heavy yielder. Postpaid: Pkt., 10c; oz., 25c; $\frac{1}{4}$ lb., 75c; $\frac{1}{2}$ lb., \$1.40; 1 lb., \$2.50.

204 DANVERS HALF LONG. None better for home gardens or market. Flesh bright orange in color and very tender. Grows six to seven inches long, tapered. Very productive. Postpaid: Pkt., 10c; oz., 25c; $\frac{1}{4}$ lb., 75c; $\frac{1}{2}$ lb., \$1.40; 1 lb., \$2.50.

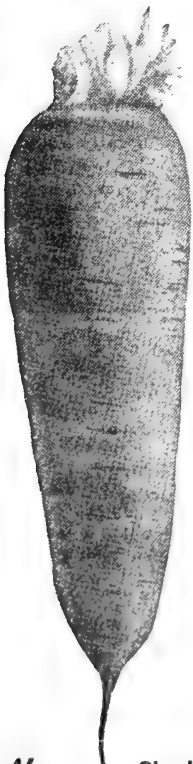

205 NEW CHANTENAY. A fine sort for bunching, market or home gardens. About 6 inches long, stump rooted, deep orange in color. A heavy yielder. Postpaid: Pkt., 10c; oz., 25c; $\frac{1}{4}$ lb., 75c; $\frac{1}{2}$ lb., \$1.40; 1 lb., \$2.50.

212 NEW CORELESS CARROT. The greatest improvement made on any vegetable in years. Fine flavor, tender, and sweet. Early uniform size. Postpaid: Pkt., 10c; oz., 30c; $\frac{1}{4}$ lb., 95c; $\frac{1}{2}$ lb., \$1.75; 1 lb., \$5.00.

HEAVY YIELDING STOCK CARROT

206 LONG ORANGE. Suitable for stock or table use. Roots red-orange, tapered to a point. A good winter keeper. Oz., 17c; $\frac{1}{4}$ lb., 52c; $\frac{1}{2}$ lb., 95c; 1 lb., \$1.75.

208 WHITE BELGIUM. One of the best stock feeding carrots, 100 days. Oz., 17c; $\frac{1}{4}$ lb., 52c; $\frac{1}{2}$ lb., 95c; 1 lb., \$1.75.

LETTUCE

LOOSE LEAF VARIETIES

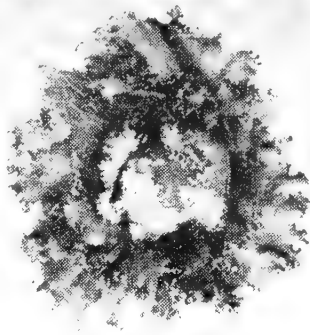

329 EARLY PRIZEHEAD OR BROWN LEAF. 40 days. Prizehead remains crisp and tender longer than others. Plant at least one row and see the difference. Postpaid: Pkt. 5c; oz. 18c; ¼ lb. 60c; ½ lb. \$1.10; 1 lb. \$2.00.

326 BLACK SEEDED SIMPSON. 46 days. Most popular light green variety. Very good for forcing. A heavy producer of large curled leaves. Postpaid: Pkt. 5c; oz. 18c; ¼ lb. 60c; ½ lb. \$1.10; 1 lb. \$2.00.

327 EARLY CURLED SIMPSON. 45 days. A widely used home garden variety. Excellent flavored, curly, crisp, and tender leaves. Postpaid: Pkt. 5c; oz. 18c; ¼ lb. 60c; ½ lb. \$1.10; 1 lb. \$2.00.

328 GRAND RAPIDS. 40 days. Excellent for greenhouse forcing and early planting outside. Superior quality with beautiful appearance. Light green heavily fringed leaves. Postpaid: Pkt. 5c; oz. 18c; ¼ lb. 60c.

330 CHICKEN LETTUCE. A hardy tall growing non-heading dark green variety. Ideal for poultry and rabbit feed. Postpaid: Pkt. 5c; oz. 15c; ¼ lb. 50c; ½ lb. 90c; 1 lb. \$1.75.

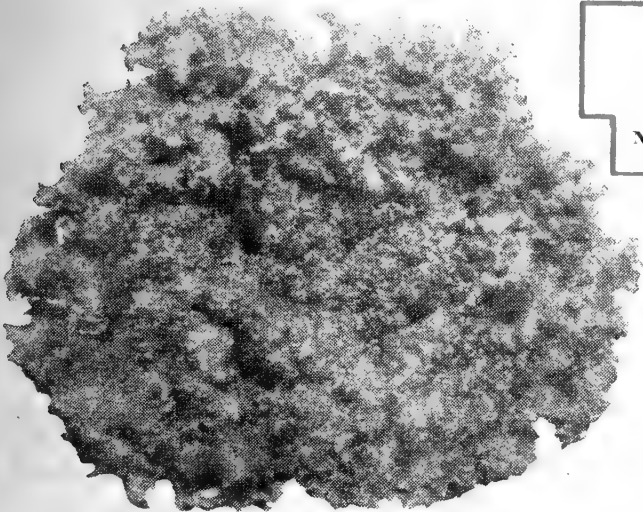

Great Lakes

20c; ¼ lb. 70c; ½ lb. \$1.25; 1 lb. \$2.25.

336 ICEBERG. 84 days. A large late variety. Conical shaped heads—interior, white, sweet and crisp. Outer leaves light green tinged with brown. A home garden variety. Postpaid: Pkt. 5c; oz. 25c; ¼ lb. 75c; ½ lb. \$1.40; 1 lb. \$2.50.

337 NEW YORK WONDERFUL #12. 77 days. Earlier than regular New York, but with all the good qualities of the older type. The outstanding shipping variety. Best for market gardens. Large solid heads, crisp and of excellent quality and fine flavor. Pictured below. Postpaid: Pkt. 5c; oz. 33c; ¼ lb. 92c; ½ lb. \$1.65; 1 lb. \$3.10.

Black Seeded Simpson

338 OAK LEAF. 43 days. The leaves are deeply lobed to resemble the oak leaf. A new favorite for the home garden. The dark green leaves are thick and tender. The quality and flavor of this distinct type lettuce is tops. Try this variety in your garden this season. Postpaid: Pkt. 10c; oz. 30c; ¼ lb. \$1.00.

CULTURE: Plant as early in spring as ground can be worked, light frost does not harm this crop. Sow seed sparingly in rows not less than 15 inches apart covering seed ½ inch deep. In leaf varieties plants should be thinned to 3 or 4 inches. For best head lettuce start in a cold frame or hot bed and set out as early as possible. For a later supply sow in drills, when up a few inches thin out plants 10 to 12 inches for heading varieties and 3 to 4 inches for loose leaved. A packet will plant a 50 foot row.

VITAMIN RICH HEADING VARIETIES

339 GREAT LAKES. 74 days. All American Winner. New York Imperial type that will really produce hard heads in hot weather. Attractive deep green of good size with thick crisp leaves. Resistant to tipburn. Postpaid: Pkt. 15c; oz. 50c.

332 IMPROVED HANSON. 80 days. An old favorite for home and market gardens. A sure heading, hardy type. Large, compact, tender, sweet heads. Postpaid: Pkt. 5c; oz. 20c; ¼ lb. 70c; ½ lb. \$1.25; 1 lb. \$2.25.

333 BIG BOSTON. 75 days. A popular butter-head variety for forcing and outside culture. Will not stand hot weather. A medium sized, compact head with creamy yellow heart. Leaves smooth glossy tinged with reddish brown. Postpaid: Pkt. 5c; oz. 33c; ¼ lb. 92c; ½ lb. \$1.65; 1 lb. \$3.10.

New York
Wonderful

COOL CRISP CUCUMBERS

238x WOODRUFF HYBRID. 62 days. A recent introduction. It is a great shipper and a fine cucumber for the home gardens. Tender flesh, rich dark green in color. Postpaid: Pkt. 10c; oz. 40c; ¼ lb. \$1.40; ½ lb. \$2.50.

226 NATIONAL PICKLING. The finest early pickling type. Uniformly smooth. Rounded ends. Flesh thick. Postpaid: Pkt. 5c; oz. 25c; ¼ lb. 65c; ½ lb. \$1.10; 1 lb. \$2.00.

228 CHICAGO PICKLE. One of the most popular pickling varieties; also good for slicing. Mid-season. Fruits medium green, uniform in size. Postpaid: Pkt. 5c; oz. 20c; ¼ lb. 60c; ½ lb. \$1.10; 1 lb. \$2.00.

233 BOSTON PICKLER. Very early and prolific; uniform size, slightly tapered, weigh about 1½ lbs. Dark green. Fine for tables. Postpaid: Pkt. 5c; oz. 20c; ¼ lb. 60c; ½ lb. \$1.05; 1 lb. \$2.00.

234 IMPROVED WHITE SPINE. Vigorous and productive, fruit uniform, seven to nine inches long, very showy. Postpaid: Pkt. 5c; oz. 20c; ¼ lb. 60c; ½ lb. \$1.05; 1 lb. \$2.00.

230 STRAIGHT 8. The highest award winner of the All-American trials in 1935. The best new cucumber. Fruits are of excellent quality, uniform size, dark green color. About 8 inches long, 2 inches wide. Vines vigorous and productive. Ideal for the home garden, local market, or shipping. Postpaid: Pkt. 5c; oz. 25c; ¼ lb. 75c; ½ lb. \$1.30; 1 lb. \$2.50.

236 IMPROVED LONG GREEN. Standard late variety. Splendid for slicing, excellent quality. Fruits dark green, weigh 3 to 3½ lbs., flesh white, firm and crisp. Postpaid: Pkt. 5c; oz. 25c; ¼ lb. 75c; ½ lb. \$1.30; 1 lb. \$2.50.

WHITE ONION

Onion is an important vegetable to good health. One ounce will plant 100 feet. We suggest raising some onions from seed, plants and sets. Sets are best for early green onions, plants produce the later milder varieties.

434 WHITE SWEET SPANISH. 110 days. The largest and mildest of all onions. Globe shaped, pure white flesh, very firm and mild. An unusual producer. Postpaid: Pkt., 10c; oz., 60c; ¼ lb., \$1.50; ½ lb., \$2.75; 1 lb., \$4.75.

440 WHITE BERMUDA OR CRYSTAL WAX. 93 days. Clear white, mild, delicate flavored large flat onion of superior quality. You can grow Bermudas from seed. Postpaid: Pkt., 10c; oz., 50c; ¼ lb., \$1.40; ½ lb., \$2.00; 1 lb., \$3.25.

433 SOUTHPORT WHITE GLOBE. 110 days. A splendid commercial onion, attractive in color, size and shape. A smooth globe type, flesh mild, fine grained and tender. A very heavy producer. Postpaid: Pkt., 10c; oz., 65c; ¼ lb., \$1.60; ½ lb., \$2.75; 1 lb., \$4.75.

441 WHITE PORTUGAL OR SILVER SKIN. 100 days. The most widely used white onion. This all purpose variety can be used for sets, pickling, green bunching or storage. Bulbs are medium size, flat, clear white, hard, fine grained, and of pleasing flavor. At pickling stage bulbs are small, smooth and round. Raise your own this year. Postpaid: Pkt., 10c; oz., 65c; ¼ lb., \$1.60; ½ lb., \$2.75; 1 lb., \$4.75.

ONION and GARLIC SETS

PRODUCE LARGER ONIONS OF HIGHEST QUALITY

Our onion sets are small sets. This means they are produced under the most ideal conditions. Berry's sets are long keepers, uniform in size and of finest quality. We guarantee delivery of your set order free from sprouts.

444 YELLOW. Postpaid: ½ gal., 40c; 1 gal., 75c. Not Prepaid: ½ bu., \$2.00; 1 bu., \$3.75.

Onion sets will be available from Feb. 15th until supply is exhausted. We cannot ship onion sets after Apr. 15th.

Quality Onion Plants. See Page 52.

GARLIC SETS

448 GARLIC SETS. A bulbous root of the onion type, easily grown, used for flavoring. When leaves turn yellow, dig and dry in shade. Postpaid: ½ lb., 28c; 1 lb., 45c.

A Wonderful Selection of PEPPERS

513 KING OF THE NORTH. A sweet pepper like Ruby King but earlier. 65-70 days from time of setting out until fruit is ready to use. Plants 22-26" tall, erect, very heavy yielding and hardy. Postpaid: Pkt., 10c; ½ oz., 30c; oz., 50c; ¼ lb., \$1.80; ½ lb., \$3.50; 1 lb., \$6.75.

511 LARGE BELL OR BULL NOSE. Plants small, erect, prolific, early. Large fruits bell shaped, deep green turning to scarlet, mild and sweet in flavor. Postpaid: Pkt., 10c; ½ oz., 25c; oz., 45c; ¼ lb., \$1.75; ½ lb., \$2.75; 1 lb., \$5.25.

515 RUBY KING. Excellent for home and market garden and shipping. Plants medium dwarf, erect, productive. Fruits dark green turning to ruby red. Flesh thick, mild and sweet. Used for mangoes. Postpaid: Pkt., 10c; ½ oz., 30c; oz., 50c; ¼ lb., \$1.80; ½ lb., \$3.50; 1 lb., \$6.75.

518 CALIFORNIA WONDER. One of the finest mild sweet flavored peppers, with thicker flesh than other varieties. Upright, prolific, vigorous grower. Very attractive, smooth, uniform and deep green. Excellent for shipping home or market gardening. Postpaid: Pkt., 10c; ½ oz., 35c; oz., 60c; ¼ lb., \$2.00; ½ lb., \$3.75; 1 lb., \$7.00.

509 CHINESE GIANT. 80 days. An extremely large, sweet pepper for home and market garden. Plants are short and stocky. Fruits are deep green changing to deep scarlet. Postpaid: Pkt., 10c; ½ oz., 35c; oz., 60c; ¼ lb., \$2.00; ½ lb., \$3.75; 1 lb., \$7.00.

520 SUNNYBROOK. 73 days. A home garden variety with unusual flavor. Fruits are tomato shaped, smooth with thick mild flesh. Deep green turning to deep red. Postpaid: Pkt., 10c; ½ oz., 30c; oz., 50c; ¼ lb., \$1.80; ½ lb., \$3.50; 1 lb., \$6.75.

514 GOLDEN QUEEN. 78 days. A large yellow variety with sweet and mild flavor. Resembles Ruby King in size and shape. A deep green turning to attractive yellow. Postpaid: Pkt., 10c; ½ oz., 35c; oz., 60c; ¼ lb., \$2.00; ½ lb., \$3.75; 1 lb., \$7.25.

517 PIMIENTO. A good canning variety. Fruits heart shaped and very smooth; color dark green changing to crimson. Flesh thick, sweet and mild. Postpaid: Pkt., 10c; ½ oz., 30c; oz., 50c; ¼ lb., \$1.80; ½ lb., \$3.50; 1 lb., \$6.50.

521 HUNGARIAN YELLOW WAX. Peppers pungent and measuring 5 to 6 inches in length, rather slender but meaty, and tapering to a somewhat twisted point. They are waxy canary yellow in color, presenting a handsome appearance, and turn to a beautiful crimson at maturity. Very prolific and desirable. Also known as Bulgarian Yellow Wax. Postpaid: Pkt., 10c; ½ oz., 35c; oz., 60c; ¼ lb., \$2.00; ½ lb., \$3.75; 1 lb., \$7.25.

512 CAYENNE. A favorite hot variety used largely for canning, pickles and drying. Plants large and productive. Fruits long, tapering; deep green changing to brilliant red. Postpaid: Pkt., 10c; ½ oz., 30c; oz., 50c; ¼ lb., \$1.80; ½ lb., \$3.50; 1 lb., \$6.75.

519 CHILL. Used for canning and drying. Fruits long and tapering, deep green changing to bright scarlet; extremely hot. Postpaid: Pkt., 10c; ½ oz., 30c; oz., 50c; ¼ lb., \$1.80; ½ lb., \$3.40; 1 lb., \$6.50.

Ruby King Pepper

Grow PEANUTS

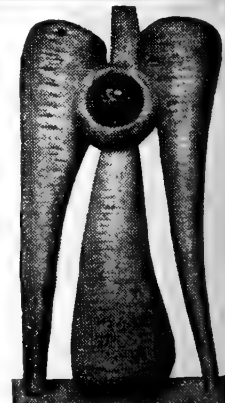

Shell before planting. Plant in rows 2½ to 3 ft. apart, 10 inches apart in the row. Cover one to two inches. A sandy soil is best.

621 NEW MAMMOTH VIRGINIA. Of upright growth. Large pods and kernels. Always yield less imperfect pods than any other variety. Vines good for stock. Postpaid: ½ lb., 25c; 1 lb., 45c; 3 lbs., \$1.10.

622 IMPROVED SPANISH. Bunch type. Early maturing with 2 white nuts in each pod. Plant 6 inches apart in 18 inch rows. Postpaid: ½ lb., 20c; 1 lb., 35c; 3 lbs., \$1.00.

PARSNIPS

502 IMPROVED HOLLOW CROWN. 95 days. Roots long, white and smooth; hollow crowned. Tender and of excellent flavor. A good keeper. Grows 10 to 12 inch roots. Many gardeners prefer to leave parsnips in the ground over winter. Freezing is not harmful to this vegetable and improves the flavor. Postpaid: Pkt., 5c; oz., 15c; ¼ lb., 35c; ½ lb., 65c; 1 lb., \$1.20.

All VEGETABLE SEED

Guaranteed to Grow

Choicest Radishes

Radish can be planted several times at intervals in early spring and again in the fall. Plant several different varieties. One oz. seed to 100 feet of row. Plant $\frac{1}{2}$ inch deep, 1 inch apart in the row.

530 EARLY WHITE TURNIP. 24 days. This popular radish is the earliest white radish and ready for the table in 23 days. Pure white crisp and tender. Postpaid: Pkt., 5c; oz., 15c; $\frac{1}{4}$ lb., 50c; $\frac{1}{2}$ lb., 80c; 1 lb., \$1.50.

526 CRIMSON GIANT. 28 days. The largest early radish. Will still be crisp and tender after growing to a huge size. We have had radishes two inches in diameter that were still sweet and crisp. The best all season radish in our trials. Postpaid: Pkt., 5c; oz., 10c; $\frac{1}{4}$ lb., 30c; $\frac{1}{2}$ lb., 55c; 1 lb., \$1.00.

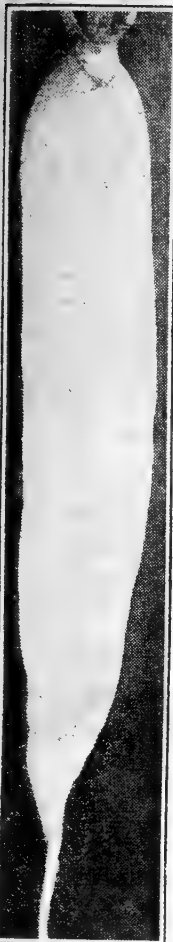

525 SPARKLER OR SCARLET TURNIP WHITE TIP. 26 days. The best of the white tip radishes from our observation. This variety did exceptionally well in the trial garden in 1947. A very solid, tender, sweet, flavored radish second only to crimson giant in ability to withstand pithiness. A most attractive variety, the Scarlet Top contrasts with the white bottom producing a showy product. Very popular with market gardeners as well as home gardeners. Postpaid: Pkt., 5c; oz., 10c; $\frac{1}{4}$ lb., 30c; $\frac{1}{2}$ lb., 55c; 1 lb., \$1.00.

528 EARLY SCARLET TURNIP. 25 days. An early maturing variety. Roots small, round, with red skin. Flesh very white, mild and crisp. Postpaid: Pkt., 5c; oz., 10c; $\frac{1}{4}$ lb., 30c; $\frac{1}{2}$ lb., 55c; 1 lb., \$1.00.

538 IMPROVED SCARLET GLOBE. 23 days. Our seed is extra select. One of the best forcing varieties. Roots bright scarlet, globular, crisp, tender and of fine quality. Postpaid: Pkt., 5c; oz., 10c; $\frac{1}{4}$ lb., 30c; $\frac{1}{2}$ lb., 55c; 1 lb., \$1.00.

533 FRENCH BREAKFAST. 25 days. A popular variety for forcing or early outdoor planting. Gets hollow in warm weather. Medium sized, olive shaped. Scarlet with white tip. Postpaid: Pkt., 5c; oz., 10c; $\frac{1}{4}$ lb., 30c; $\frac{1}{2}$ lb., 55c; 1 lb., \$1.00.

541 ICICLE. 27 days. The most popular white radish. Grows long and slender, free from side roots. Flesh clear white, brittle, mild flavored. Postpaid: Pkt., 5c; oz., 10c; $\frac{1}{4}$ lb., 30c; $\frac{1}{2}$ lb., 55c; 1 lb., \$1.00.

Iceicle Radish

Sparkler

540 MIXED RADISHES. We offer a mixture of the best varieties of radishes. Postpaid: Pkt., 5c; oz., 10c; $\frac{1}{4}$ lb., 30c; $\frac{1}{2}$ lb., 55c; 1 lb., \$1.00.

542—CHINA ROSE WINTER. 52 days. Bright rose-red in color, 4 to 6 inches long, two inches in diameter, cylindrical shape. Flesh white, crisp, and mild flavored. Postpaid: Pkt., 5c; oz., 12c; $\frac{1}{4}$ lb., 40c; $\frac{1}{2}$ lb., 75c; 1 lb., \$1.25.

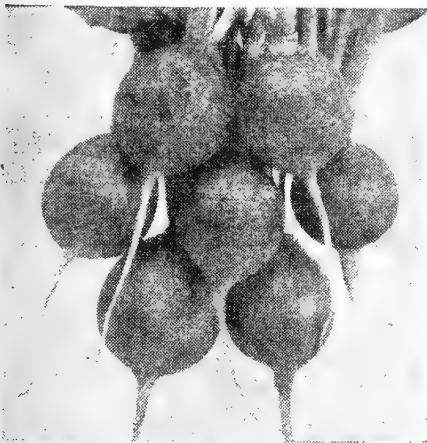

543 LONG BLACK SPANISH. 50 days. One of the hardest and best winter keeping varieties. Large, firm, jet black skin, flesh snow white. Solid crisp and pungent. Postpaid: Pkt., 5c; oz., 12c; $\frac{1}{4}$ lb., 40c; $\frac{1}{2}$ lb., 75c; 1 lb., \$1.25.

3 DELICIOUS SNAPPY RADISHES

The three best radishes for the home garden. Extra early, tender, snappy, delicious. Each one a superior variety. No. 539—25c Value at 19c. Postpaid.

TURNIPS for Summer & Winter

One ounce will plant 100 feet of row. Drill seed about 2 inches apart—cover very lightly.

601 PURPLE TOP STRAP LEAF. 46 days. An early, very productive variety. One of the most extensive grown kinds for home or market gardens. Postpaid: Pkt., 5c; oz., 15c; $\frac{1}{4}$ lb., 50c; $\frac{1}{2}$ lb., 90c; 1 lb., \$1.60.

607 PURPLE TOP WHITE GLOBE. 57 days. The most popular home and market garden variety. A good shipper. Very attractive appearance, fine in quality. Postpaid: Pkt., 5c; oz., 15c; $\frac{1}{4}$ lb., 50c; $\frac{1}{2}$ lb., 90c; 1 lb., \$1.60.

606 SEVEN TOP. 45 days. Grown for the tops which are excellent for greens and stock grazing. The roots are fibrous and of poor quality. May be left standing in the open ground during the winter, except in the extremely northern states. Extensively cultivated in the South. Postpaid: Pkt., 5c; oz., 10c; $\frac{1}{4}$ lb., 30c; $\frac{1}{2}$ lb., 55c; 1 lb., \$1.00.

604 SNOWBALL. 75 days. A late white variety grown largely in the South. Tops are large with cut leaves. Postpaid: Pkt., 5c; oz., 15c; $\frac{1}{4}$ lb., 50c; $\frac{1}{2}$ lb., 90c; 1 lb., \$1.60.

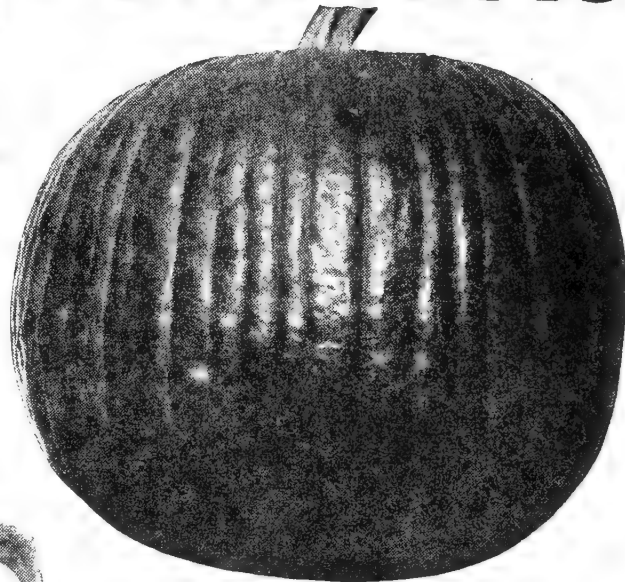

603 SHOGGIN. 30 days. The most popular foliage turnip. Grown for early greens and small roots. Tops 18 to 20 inches tall, erect, bright green, strap leaved. Roots round, white, tender and mild. The fastest grower of all. Postpaid: Pkt., 5c; oz., 10c; $\frac{1}{4}$ lb., 35c; $\frac{1}{2}$ lb., 60c; 1 lb., \$1.00.

609 COWHORN. 70 days. A stock feeding turnip. Roots 12 to 15 inches long, tapering. Flesh is sweet and tender. A good keeper. Postpaid: Pkt., 5c; oz., 15c; $\frac{1}{4}$ lb., 50c; $\frac{1}{2}$ lb., 90c; 1 lb., \$1.60.

610 MIXED TURNIPS. A mixture of all sorts, giving a variety of turnip roots and tops at one planting. Postpaid: Pkt., 5c; oz., 12c; $\frac{1}{4}$ lb., 40c; $\frac{1}{2}$ lb., 75c; 1 lb., \$1.25.

612 RUTABAGA, AMERICAN PURPLE TOP. 90 days. A dependable variety for home or market garden. Roots are large, round, yellow with purple top; flesh is light yellow, firm, sweet and tender. Postpaid: Pkt., 5c; oz., 15c; $\frac{1}{4}$ lb., 50c; $\frac{1}{2}$ lb., 90c; 1 lb., \$1.60.

PUMPKINS

Connecticut Field Pumpkin

481 MAMMOTH PRIZE. The largest or all Pumpkins. Valuable for stock feeding, but is also fine for pies. Flesh is thick, of a beautiful bright yellow, fine grained, solid and tender. Postpaid: Pkt., 5c; oz., 20c; $\frac{1}{4}$ lb., 70c; $\frac{1}{2}$ lb., \$1.35; 1 lb., \$2.50.

483 SWEET OR SUGAR PIE. Standard variety for pies. Flesh thick, dry and sweet, orange-yellow, and of superior quality. Fruits weigh 6 to 8 lbs. Keep well. Will make pies that will melt in your mouth. Postpaid: Pkt., 5c; oz., 15c; $\frac{1}{4}$ lb., 45c; $\frac{1}{2}$ lb., 80c; 1 lb., \$1.50.

485 KENTUCKY FIELD. Used largely for canning. Grow large, flat, weigh 10 to 15 lbs. Flesh deep yellow, coarse, thick and nutritious, and of good flavor. Also used for stock feeding. Postpaid: Pkt., 5c; oz., 15c; $\frac{1}{4}$ lb., 45c; $\frac{1}{2}$ lb., 80c; 1 lb., \$1.50.

486 CONNECTICUT FIELD. (Picture above.) The standard cornfield pumpkin. Fruits grow large, weight 15 to 25 lbs. Smooth, hard, orange-red skin; flesh orange-yellow, thick, coarse, and sweet. Fine for pies, canning, or feeding to stock. Postpaid: Pkt., 5c; oz., 15c; $\frac{1}{4}$ lb., 40c; $\frac{1}{2}$ lb., 80c; 1 lb., \$1.50.

484 CUSHAW OR CROOKNECK. Very popular variety. Very large, often 2 ft. long, crookneck shape. Creamy white shell; flesh yellow, solid, sweet. Excellent for pies; used also for stock feeding. Postpaid: Pkt., 5c; oz., 15c; $\frac{1}{4}$ lb., 40c; $\frac{1}{2}$ lb., 80c; 1 lb., \$1.50.

487 GREEN STRIPED CUSHAW. Cream with dark green stripe. 16-20" long, weight 12 to 16 lbs. Yellow flesh. Postpaid: Pkt., 5c; oz., 15c; $\frac{1}{4}$ lb., 40c; $\frac{1}{2}$ lb., 80c; 1 lb., \$1.50.

489 MIXED. A combination filling all practical purposes: for pies, local markets and stock feed. The boys will find just the right size for Halloween too. Postpaid: Pkt., 5c; oz., 15c; $\frac{1}{4}$ lb., 40c; $\frac{1}{2}$ lb., 80c; 1 lb., \$1.50.

Purple Top White Globe

USE BERRY'S BUG DUST

Don't wait until the pests have destroyed your garden, order Berry's Bug Dust with your seed. 1 lb., 35c; 3 lbs., \$1.00; 5 lbs., \$1.60. Postpaid.

GROW A VARIETY of Health Giving

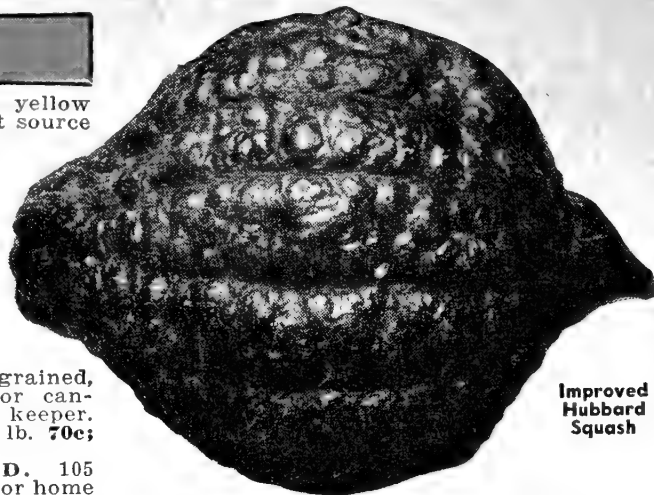

FOOL

WINTER SQUASH

Winter Squash, particularly yellow fleshed varieties, is an excellent source of Vitamin A. Squash is also easily kept in dry storage. A family should have 50 pounds a year. We recommend 1 oz. of Summer Squash and 2 oz. of winter varieties. Plant in hills, summer types about 4 feet apart, winter about 8 feet apart.

552 GOLDEN HUBBARD. 100 days. Earlier than improved Hubbard. Fruits 8 to 10 pounds with a hard warty orange skin. Thick, yellow, fine grained, dry flesh; excellent quality for canning and freezing. A good keeper. Postpaid: Pkt. 5c; oz. 25c; ¼ lb. 70c; ½ lb. \$1.35; 1 lb. \$2.40.

554 IMPROVED HUBBARD. 105 days. Standard winter variety for home and market gardens. The best shipper. Our strain is very early. Dark Bronze-green, rind hard and tough, slightly warted.

Improved Hubbard Squash

Fruits weigh about 12 pounds, flesh very thick; orange-yellow, fine grained, sweet and dry. Postpaid: Pkt. 5c; oz. 25c; ¼ lb. 70c; ½ lb. \$1.35; 1 lb. \$2.40.

555 BLUE HUBBARD. 110 days. Like Improved Hubbard but the color is a clear blue grey. Flesh is bright yellow, thick, fine grained, very dry and sweet. Splendid for pies. A good keeper. Postpaid: Pkt. 5c; oz. 25c; ¼ lb. 70c; ½ lb. \$1.35; 1 lb. \$2.40.

556 BUTTER CUP. 100 days. A new introduction just the right size for baking. Grows exceptionally well in the Great Plains region. Of excellent quality, flavor is similar to sweet potatoes. Flesh dry deep rich orange, texture and keeping qualities the best. Postpaid: Pkt. 5c; oz. 20c; ¼ lb. 55c; ½ lb. 90c; 1 lb. \$1.75.

557 TABLE QUEEN OR DES MOINES. 58 days. Individual size squash. Desirable for home or market garden; also a good shipper. Fruits acorn-shaped, smooth, thin shelled, dark green. Six inches long, 3 inches diameter. Flesh light yellow, with sweet flavor. Makes splendid pies, bakes well. Postpaid: Pkt. 5c; oz. 20c; ¼ lb. 55c; ½ lb. 90c; 1 lb. \$1.75.

DELICIOUS SUMMER SQUASH

561 MAMMOTH WHITE BUSH SCALLOP. 56 days. A favorite with all our trade. An early maturing round flat squash, largest of the summer varieties. Fruit is clear white, and excellent for stewing. Postpaid: Pkt. 5c; oz. 20c; ¼ lb. 55c; ½ lb. 90c; 1 lb. \$1.75.

553 GIANT GOLDEN STRAIGHTNECK. 55 days. A new variety selected from the crookneck. The straight neck permits easy packing and handling. Fruits 18 to 20 inches long, heavily warted, deep orange color. Thick and meaty flesh. Postpaid: Pkt. 5c; oz. 20c; ¼ lb. 55c; ½ lb. 90c; 1 lb. \$1.75.

563 EARLY GOLDEN SUMMER CROOKNECK. 50 days. Long bright orange yellow fruit, densely covered with warts. Has sweet fine grained flesh of rich flavor. True habit. Postpaid: Pkt. 5c; oz. 20c; ¼ lb. 55c; ½ lb. 90c; 1 lb. \$1.75.

Golden Straightneck

551 BLACK ZUCCHINI. 60 days. Fruits very nearly cylindrical, straight, smooth dark green-black. Flesh greenish white at eating stage, very good flavor. Postpaid: Pkt. 5c; oz. 20c; ¼ lb. 55c; ½ lb. 90c; 1 lb. \$1.75.

Dust Squash with Berry's Sure Kill Bug Dust

SALSIFY

571 MAMMOTH SANDWICH ISLAND. Vegetable Oyster. An improved variety with roots 6 to 8 inches long, thick, tapering, smooth. Decided oyster-like flavor. Fine for soups, etc. Postpaid: Pkt. 10c; ½ oz. 20c; oz. 35c; ¼ lb. \$1.30; ½ lb. \$2.55; 1 lb. \$4.90.

TOBACCO

Postpaid prices on each of the following four varieties: Pkt. 10c; oz. 65c; ¼ lb. \$2.15.

726 CONNECTICUT SEED LEAF.

727 HAVANA. An early variety used largely for cigar wrappers on account of thinness, and fine quality.

728 WHITE BURLEY. Very popular.

729 JUDY'S PRIDE. Broad attractive leaves. Easy to cure. Used for fillers and wrappers; smoking or chewing.

SPINACH

581 NEW ZEALAND. It thrives in hot, dry weather, and almost any soil. May be cut throughout the summer, but can not stand frost. Leaves small, broad and pointed, while plants are large and spreading. Postpaid: Pkt. 5c; oz. 15c; ¼ lb. 45c; ½ lb. 80c; 1 lb. \$1.50.

MAMMOTH SUNFLOWER

MAMMOTH SUNFLOWER. Has a high feeding value and is easily grown. ¼ lb. 15c; ½ lb. 25c; 1 lb. 40c.

TAMPULA

591 A delicious green vegetable the leaves of which are cooked, prepared and served like spinach. Postpaid: Pkt. 10c; oz. 70c.

MUSTARD

712 TENDERGREEN OR SPINACH MUSTARD. 50 days. A quick growing variety that does not go to seed as soon as other varieties. Resistant to heat and drought. Distinctive superior flavor. Rich in vitamins and iron. Postpaid: Pkt. 5c; oz. 15c; ¼ lb. 30c; ½ lb. 50c; 1 lb. 80c.

713 SOUTHERN GIANT CURLED. 65 days. The most popular and best known mustard for greens. Leaves long, wide, light green, heavily crumpled and curled at the edges. Best known in the South. Postpaid: Pkt. 5c; oz. 15c; ¼ lb. 30c; ½ lb. 50c; 1 lb. 80c.

711 FLORIDA BROAD LEAF. 55 days. A large upright plant with unusually large, thick, bright green, smooth leaves. A popular variety. Postpaid: Pkt. 5c; oz. 15c; ¼ lb. 30c; ½ lb. 50c; 1 lb. 80c.

MISCELLANEOUS

690 KALE, DWARF GREEN CURLED SCOTCH. 55 days. A member of the cabbage family, used for greens. Leaves large and crimped. Postpaid: Pkt. 5c; oz. 15c; ¼ lb. 45c; ½ lb. 85c; 1 lb. \$1.60.

695 KOHLRABI, WHITE VIENNA. 62 days. Dwarf variety, excellent for home and market gardens. Bulbs 2 to 3 inches. Postpaid: Pkt. 5c; oz. 35c; ¼ lb. \$1.20; ½ lb. \$2.00.

720 OKRA, LONG GREEN PODDED. 55 days. Plants dwarf and very productive. Valuable for soups and stews. Postpaid: Pkt. 5c; oz. 10c; ¼ lb. 30c; ½ lb. 55c; 1 lb. \$1.00.

721 OKRA, WHITE VELVET. 60 days. Early, prolific, with creamy white pods. Meaty, tender, smooth, very attractive. Postpaid: Pkt. 5c; oz. 10c; ¼ lb. 30c; ½ lb. 55c; 1 lb. \$1.00.

706 BROCCOLI, ITALIAN GREEN SPROUTING. 70 days. Forms large head consisting of a cluster of small heads. Both heads and stems are cooked and served like cauliflower but is easier to raise and has more delicate flavor. Postpaid: Pkt. 10c; ½ oz. 20c; oz. 35c; ¼ lb. \$1.15; ½ lb. \$2.00; 1 lb. \$3.50.

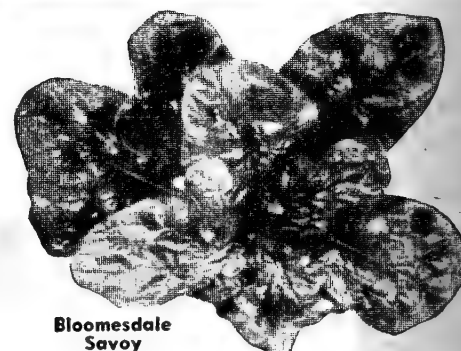

705 COLLARDS, GEORGIA. A good substitute for cabbage which succeeds on poor soil, grown especially in the South. Can be boiled like cabbage or used as cole slaw. Postpaid: Pkt. 5c; oz. 10c; ¼ lb. 25c; ½ lb. 45c; 1 lb. 75c.

676 BRUSSELL SPROUTS, LONG ISLAND IMPROVED. One of the best varieties for home gardens. The plants are dwarf and compact about 20 inches tall, producing solid round cabbage like balls. Excellent for freezing. Postpaid: Pkt. 10c; oz. 50c.

702 LEEK, LONDON FLAG. Stems become very long, thick, white and tender. Used in soups and stews for its onion like flavor. Postpaid: Pkt. 10c.

495 PARSLEY, MOSS CURLED. 70 days. Dark green finely cut and curled leaves. Very desirable for garnishing and decorating. Postpaid: Pkt. 10c; oz. 20c; ¼ lb. 50c.

SPINACH

Bloomsdale Savoy Spinach

585 NOBLE GIANT. Easy to wash. Leaves medium thick, green, very large, broad and smooth, with slight crumpling. Very good quality. The best of the large smooth leaved type. A long standing variety. Postpaid: Pkt. 5c; oz. 10c; ¼ lb. 30c; ½ lb. 50c; 1 lb. 85c.

583 BLOOMSDALE SAVOY. An early variety. Popular for local and long distance markets, for canning, and home use. A long keeper after cutting. Leaves medium size, crumpled, glossy dark green. Postpaid: Pkt. 5c; oz. 10c; ¼ lb. 30c; ½ lb. 50c; 1 lb. 85c.

582 LONG STANDING. A quick growing, long bearing variety for mid-summer use. Plants grow low and spreading, with pointed dark green leaves. Postpaid: Pkt. 5c; oz. 10c; ¼ lb. 30c; ½ lb. 50c; 1 lb. 85c. (See opposite lower corner for New Zealand Spinach.)

Berry's LAWN Seed

SEEDING THE LAWN

Remember that a lawn properly planned and planted is cheaper than a "scatter seed and rake it in lawn." Berry's Supreme Lawn Mixture is unsurpassed for normal seedings such as sunny to semi-shaded areas. For shady areas use Berry's Shady Lawn Mixture. The best time to sow the lawn is in early spring. However, beautiful lawns can be obtained from early fall seedings. If the seed is to be sown by hand it should be divided into two equal amounts. Sow one part East to West about six feet in width, and the second part North to South covering the same distance. This method assures equal distribution of seed and prevents patchy uneven lawns. After seeding the lawn, rake it lightly and roll with a light roller. Keep the entire area moist for about twelve to fifteen days.

1 lb. sows 200 square feet 10x20
5 lbs. sows 1000 square feet 20x50

EXTRA FANCY KENTUCKY BLUE GRASS See also page 18

Most satisfactory all purpose lawn grass for the U. S. from Nebraska and Kansas east to coast and from Canada south to Tennessee. Stands drought. Makes excellent turf. Grows from early spring to late fall. Postpaid: 1 lb. \$1.00; 3 lbs. \$2.70; 5 lbs. \$4.25; 10 lbs. \$7.75.

OTHER GRASSES FOR LAWN

CHEWINGS FESCUE. Valuable for shade and sandy soil. Postpaid: 1 lb. 90c; 3 lbs. \$2.40; 5 lbs. \$3.75; 10 lbs. \$7.25.

RYE GRASS. Provides green growth while the other grasses are getting started. See page 15. Postpaid: 1 lb. 35c; 3 lbs. 95c; 5 lbs. \$1.50; 10 lbs. \$2.65.

RED TOP. Fine to sow on banks to prevent erosion. See page 15. 1 lb. 90c; 3 lbs. \$2.55; 5 lbs. \$4.00; 10 lbs. \$7.75. Postpaid.

POA TRIVIALIS. An excellent grass for shady places. Postpaid: 1 lb. \$1.50; 3 lbs. \$4.05; 5 lbs. \$6.25; 10 lbs. \$12.00.

BERMUDA GRASS. Used in South for lawns. Postpaid: 1 lb. \$1.50; 3 lbs. \$4.20; 5 lbs. \$6.50 10 lbs. \$12.50.

BERRY'S SUPREME LAWN SEED

This makes a fine smooth lawn in the northern half of the United States. Contains chiefly Blue Grass, Red Top, White Dutch Clover and Rye Grasses. The quicker growing grasses provide a nice green stand while the slower kinds are coming on. It is our most popular mixture, because it gives such wonderful satisfaction. Postpaid Price: 1 lb. 95c; 3 lbs. \$2.65; 5 lbs. \$4.15; 10 lbs. \$7.95.

There is nothing that will enhance the attractiveness, and add to the value of a home more than a well planned and well kept lawn.

BERRY'S SYLVAN FOR SHADY AREAS

This contains grasses naturally adapted to growing in shade, such as Chewings Fescue and Poa Trivialis. Fine for grounds shaded by trees or buildings. In heavy shade a light application of lime in addition to fertilizer will improve results. This is a dandy mixture. Postpaid: 1 lb. \$1.00; 3 lbs. \$2.70; 5 lbs. \$4.25; 10 lbs. \$8.00.

TERRACE MIXTURE

This mixture contains deep rooted grasses. They hold the soil firmly and resist drought. Select this for terraces and sloping places. Soil on terraces is often filled in dirt of low fertility. It will pay you to fertilize your ground well. You cannot have a nice lawn on poor soil. Postpaid: 1 lb. \$1.00; 3 lbs. \$2.70; 5 lbs. \$4.25; 10 lbs. \$8.00.

Kill Hoppers, Beetles, Etc.

A lot of damage is done around home lawns and gardens by insects. Synklor-50-W Chlordane controls ants, chinch bugs, Grasshoppers, Japanese Beetles and Beetles Grubs, Mole Cricket, Roaches, Ticks, Wire Worms. Comes in powder form which can be used with water. Easy to apply. A little goes a long way. Postpaid Price 8 oz. can \$1.50; 1 lb. can \$2.50.

WHITE DUTCH LAWN CLOVER

The small white clover so popular for lawns. This may be mixed with any lawn grass you have on hand or sown on an old lawn in the early spring. Very drought resistant. Helps soil fertility. Seed is very small. A pound sows 1,000 or more square feet, depending on how heavy percentage of clover is desired. Postpaid: 1 lb. \$1.50; 3 lbs. \$4.20; 5 lbs. \$6.50; 10 lbs. \$12.50.

VELVET GREEN

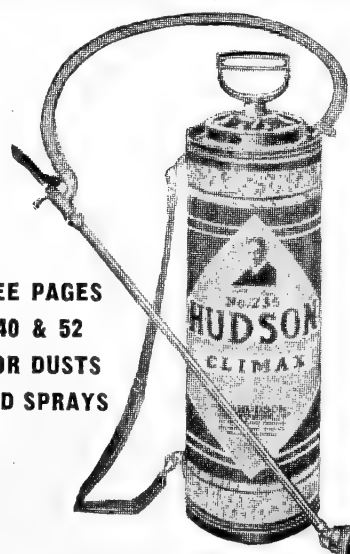

For Beautiful Luxuriant Lawns

Feed your Grass with this scientifically balanced 5-10-5 plant food. Then watch it grow. Helps develop a thick healthy growth that can take rough treatment. Economical to use. Easy to apply. Write for Berry's Lawn Clinic for additional information on Lawns and seeding. Postpaid price 1 lb. 28c; 10 lbs. \$1.45. Not prepaid 25 lbs. \$1.60; 100 lbs. \$4.25.

Express Collect F.O.B. Southern Grower: 1000 plants, weight 12 lbs. for \$ 6.49
2000 plants, weight 20 lbs. for 10.95
25 of a variety minimum.

If you do not specify the date you want your plants shipped, we will ship at the proper planting time for your territory. Plants are guaranteed to arrive in perfect condition for transplanting or we will replace plants or refund your money. Days listed after each variety indicates the time it takes for your plants to produce a crop.

Plants often bleach to a yellowish-green or wilt when shipped. This does not hurt the plants and they will resume their natural green soon after transplanting. Complete planting instructions sent with your order.

DUST VEGETABLES For Biggest Yields

"BARSPROUT"

Prevent Sprouting of Stored Potatoes

A newly discovered chemical compound which prevents sprouting of potatoes in storage. Actual Laboratory tests prove that Barsprout keeps potatoes from sprouting. They remain fresh, tasty and free from shrinkage for as long as a year. It is also effective on carrots, beets, turnips and rutabagas. Economical and easy to use. Simple to apply. Complete instructions on can. Postpaid price 12 oz. can \$1.00. Sufficient to treat 8 1/2 bushels or 500 lbs.

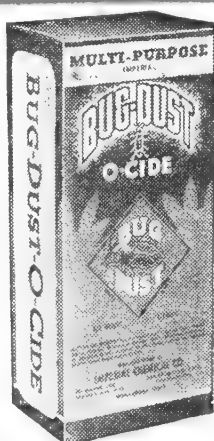

"KALITE"

A New Dust

A Rotenone impregnated dust. Gives 4-way action. Kills chewing and sucking insects by contact, as a stomach poison, by leg paralysis and repels other insects that might attack plants.

The economical package illustrated makes possible a very low price. Contains one pound. Cost only 39c postpaid.

\$1.00

SPECIAL!

A 2 1/2 lb. carton of this famous Bug-Dust-O-Cide together with a duster. Full directions given. Ideal for the average gardener. Price is postpaid. If you do not have dusting equipment be sure to try this \$1.00 special.

Berry's "BUG DUST"

Kills Bugs and Insects

This is a powerful combination of Rotenone Lethane Cuproicide and Nicotine. It has a triple action on insects, as a stomach poison, a contact poison, and as a repellent. It is non-poisonous to humans and domestic animals.

Berry's Bug Dust controls aphids, bean beetles, flea beetles, leaf hoppers, cabbage worms, cucumber beetles, potato beetles and certain other insects. 1 lb. Bag postpaid 35c; 3 lb. Bag postpaid \$1.00; 5 lb. Bag postpaid \$1.60.

Set Plants Out Earlier

with HOT CAPS

Glastex Translucent paper enables healthful warmth and light of the sun to penetrate, fends off excessive heat. It sheds water, doesn't get "soggy." Protects against too much moisture, and dry weather. Hotcaps can be ventilated to provide air. Rain, hail, sleet, and sand storms won't bash them down. And they're streamlined to offer least resistance to wind. Flange holds them secure.

You can use hotcaps with nearly any crop that needs protection, any crop you want to get to market earlier. Experience has indicated hotcaps are especially suited to growing requirements of: Tomatoes, Cabbages, Cucumbers, Strawberries, Lima Beans, Pumpkin, Peppers, Muskmelons, Watermelons, Egg Plant, etc.

IT IS EASY TO GROW Beautiful FLOWERS

BERRY'S LARGE SIZE FLOWER PACKET MIXTURES FINEST CUT FLOWERS

Pkt. 10c

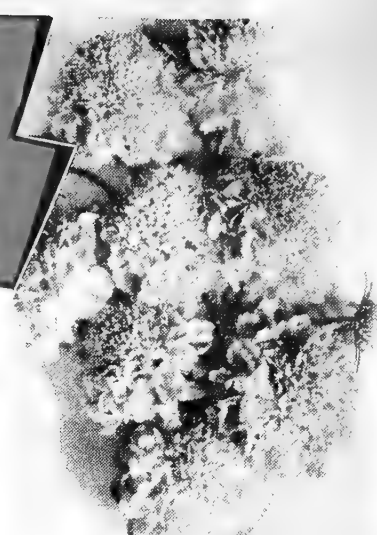

Contains all the popular varieties found in our catalog listing. A glorious variety of flowers for cutting. We suggest planting in rows so you can cultivate. Keep flowers cut close for more prolific blooming.

BERRY'S WILDFLOWER MIXTURE

Pkt. 10c

Native annuals that are hardy and will bloom over a long period. Fine for a group or corner planting where no formality is needed but a mass of bloom can be enjoyed all the time.

Our special Flower Mixtures page 54. All flowers listed are marked Annual (A) or Perennial (P). Each price is for our large sized packet. The flower seeds listed here are leading types that are easy to grow and will give you an abundance of color over long periods. Our prices are reasonable on tested seeds.

It's Easy To Plan YOUR FLOWER GARDEN

PLANT PERENNIALS TOO

In addition to the beauty you can get from flower seed you should set out some perennial plants as described and priced on page 55. You can transform your yard into a place of great beauty with a variety of flowers. The cost is not high and the enjoyment these flowers bring can hardly be measured in dollars.

Perennial flowers are the easiest to grow. They are hardy and live for years. We ship you the plants in good growing condition. They will usually bloom the first season if they are planted early. Then next year they will start early in the spring and give you a world of beauty. Just keep them clean of weeds.

Bulbs too are easy to grow. Some like Peonies, will last for years without replanting. Others like Gladiolus, Cannas, etc. have to be taken up in the fall and replanted next spring. That makes a little extra work but they never disappoint you in returning much beauty for little effort.

Antirrhinum

Zinnia

ROCK GARDENS

Borders and Edges

We have carefully selected a group of annuals and perennials best suited for planting rock gardens, borders, and edgings. These plants range in height from 2 inches to one foot. These smaller plants take much less garden space than other varieties.

1514 PERENNIALS FOR ROCK GARDENS. A mixture of low growing plants that will start early and bloom throughout the growing season. They grow from the old roots each spring, save replanting every year. Pkt. 15c.

1320 ANNUALS FOR ROCK GARDENS. A carefully prepared mixture of low growing, many colored, free flowering annuals which will supply color in your rock garden all summer. Pkt. 10c.

1110 AGERATUM, BLUE BEDDING. (A) Blooms profusely. Splendid for pot culture, rock gardens, and bedding. Pkt. 10c.

1112 ALYSSUM, VIOLET QUEEN. (A) A beautiful shade of violet. Does not fade in hot weather. Pkt. 10c.

1111 ALYSSUM, BASKET OF GOLD. (P) Produces a mass of golden yellow flowers very early. Pkt. 10c.

1115 ALYSSUM, CARPET OF SNOW. (P) Pkt. 10c.

1116 CANDY TUFT IBERIS, Gibraltarcia, White Flushed Lilac, Early. (P) Pkt. 10c.

1295 MARIGOLD, MINIATURE MIXED. (A) 9". A delightful mixture. Pkt. 10c.

Berry's QUALITY NURSERY STOCK is Guaranteed

All NURSERY PRICES ARE PREPAID Save an Extra 20%

Berry's guaranteed nursery stock is grown by experts, wherever possible in northern sections for extra-hardiness. Transplanted, pruned and root pruned, to insure sturdy, well rooted, well branched plants that will thrive anywhere. Do not be misled by claims of superior quality—we offer high quality at very low prices.

If you can not plant your stock when you receive it, dig a shallow trench or hole, lay the plants in this, covering the roots with earth. When planting be sure the holes are plenty large to allow full spread of the roots. Sprinkle fine top soil around the roots, water thoroughly, then rake some dry soil over the top. Keep moist but not water-logged until growing.

Berry's send you complete instructions for planting your nursery stock. These are included in the package. Read them carefully and you will succeed.

LIBERAL GUARANTEE
Berry's guarantee their nursery stock to be exactly as represented and to be delivered to you in good planting condition. If not, we will replace it free of charge but you must notify us within 30 days after you receive it.
If any nursery stock is proven not true to name, we will, upon proper proof, replace all such stock or refund the exact amount paid, but, in no case, shall we be liable for any sum greater than the amount originally received for said nursery stock.
If any Berry's nursery stock fails to grow with proper care, we will replace it at half price, if you notify us within 90 days after you receive it.

BERRY Catalog Pictures Are Not Expensive, but Quality Is Tops and Prices Lower

ALL ITEMS ON THIS PAGE CAN BE ORDERED EITHER IN SPRING OR FALL

No. 5383—DOUBLE FLOWERING KERRIA. Grows 4 to 6 ft. tall. Blooms in spring. Slender branches are covered with beautiful deep yellow blossoms resembling small roses. Branches stay green in winter and are very attractive when foliage drops. 18 to 24 inch size. Each \$1.10; 3 for \$3.15.

No. 5431—BLUE HYDRANGEA. Large compact flowers of intense azure blue. Most unusual of any shrub. To be sure of getting the blue color we include a package of special material plus directions on mixing with soil. Field grown plants. Each \$1.40; 3 for \$4.00.

ROSEZALEAS

Grows to 10 feet tall. A solid mass of color in the spring. Every branch covered with hundreds of one inch blossoms, as fragrant as a Rose, as beautiful as an Azalea. Makes a handsome compact, upright shrub with rich green foliage. So thickly covered at blooming time that all you can see are the blossoms. In the fall, the branches are laden with bright little red apples. You'll get pecks of these firm, tart, crisp, edible fruits that are fine for jelly. Extra hardy and easy to grow. Thrives in almost any soil or climate. 3 to 4 ft. size only.

Fast Growing HEDGES

For Beauty
and Protection

Trimmed and Natural LOW HEDGES

IMPORTANT: Your hedge will never be tight, close to the ground unless you prune it severely immediately after planting. Always prune off at least 1/2 of the top branches. Smaller sizes should be left only about 4 to 6 inches taller than ground—larger sizes about 10 to 12 inches.

No. 5503—PRIVET, CALIFORNIA. Has shiny green foliage. Fine for formal hedges, upright, quick growing and easily sheared to any height. Not as hardy as Amoor River Privet in severe climates.

No. 5506—PRIVET, AMOOR RIVER NORTH. Most popular hedge plant—Hardy Russian Privet. Dense, glossy green foliage on numerous upstanding branches. Can be kept pruned down to a thick Hedge only 2 feet high or will grow over 4 feet if not pruned.

SEEDLING TREES FOR WINDBREAKS

These are more rapid growing than Evergreens so should be used in combination with Evergreens as they are not nearly so permanent as Evergreens.

For just a few dollars you can now plant several hundred Tree Seedlings: to protect your home, farm buildings, and feed lots from sweeping winds in winter and summer. Nearly every farm has some waste land that will grow fence posts, wood to burn and also prevent soil erosion. A fine investment needed on every farm at such low cost.

Our tree seedlings are well rooted, hardy and vigorous. They are easy to start, planting instructions being furnished. We ship prepaid at proper planting time early in the Spring and guarantee satisfaction.

We suggest planting all sizes of tree seedlings in rows where it is convenient to cultivate them often the first two or three years—rows about 36 inches apart with the seedlings 12 to 24 inches apart in the row—they grow more bushy when planted 24 inches apart. After 2 years, when the trees are well rooted and about 5 feet tall, transplant into permanent location.

Blue Spruce

Irish Juniper

Fine EVERGREENS at LOW COST

LARGE EVERGREENS FOR WINDBREAK

This special offer of twice planted windbreak stock is our biggest value of the year. We make this offer only on these 2 varieties as these evergreens alone make a fine windbreak. These extra large trees that cost so little may be planted in their permanent location. These varieties may be planted 8 to 12 feet apart.

RED CEDAR

Hardy anywhere. Can be trimmed to any shape and used alone or in group plantings. The Dean of all Junipers. Dark green to bluish foliage covered with bright blue and silver berries in season.

AMERICAN ARBOR VITAE

A very hardy rapid grower that thrives on heavy soils. Densely branched. The leading evergreen hedge plant. Equally attractive as a specimen, producing tall straight trunks.

1 Foot Size EVERGREENS

Big transplants to be set in permanent location as low as 25c each. Fine for either landscaping or a windbreak planting.

EVERGREENS for Lawn Planting

POSTPAID: Your Choice 1 of any variety \$1.30
2 of any variety 2.20
4 of any variety 3.95

PITZERS JUNIPER. Exceptionally beautiful, graceful and hardy in shade or sun. Spreading branches 3 to 4 feet at maturity. 12 to 15 inch size.

SAVIN JUNIPER. Hardy everywhere. Beautiful trailing type, fine for foreground or foundation groups. 12 to 15 inch size.

GLOBE ARBOR VITAE. Charming little globe for the foreground giving delightful contrast to spreading juniper. 10 to 12 inch size.

BLACK HILLS SPRUCE. Famed for its perfect symmetry. Extremely hardy. Great favorite for specimen planting on lawn. 15 to 18 inch size.

JUNIPERUS VIRGINIANA. We are fortunate in being able to offer you this variety at the above prices. In general appearance it has a bright green foliage. Very hardy, growing 15 to 20 feet, and stands almost any amount of trimming. The origin of this tree is not definitely established but it is thought to have originated in one of the European nurseries.

Favorite Colorado Blue Spruce

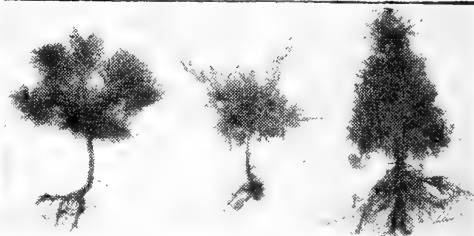

Now you can have America's favorite of all ornamental evergreens in your lawn—famous Colorado Blue Spruce. These 4 year old transplants 6-10 inches tall can be set in permanent location. If you have room for a larger planting order 2 or more collections. No. 725—4 for only \$1.70 Postpaid.

Order 2, one for each side of door. No. 726. Three trees 1 of each, 1-1½ ft. size. \$2.49 Postpaid. Two Collections for \$3.98.

Special EVERGREEN OFFER

This is a very special offer which you will find advertised in many farm magazines. We ship extra nice 3-6" northern grown stock in this collection. Consists of 15 each of 2 varieties.

Consists of 10 Colorado Blue Spruce, 10 Norway Spruce, and 5 Ponderosa Pine. A GREAT VALUE FOR \$1.00 POSTPAID. ORDER COLLECTION NO. 745.

100 EVERGREEN SEEDLINGS

Our favorite collection containing two best Spruce and Pine varieties, an ideal combination for any windbreak. These seedlings are easy to start, cost less than 4c each. 25 each: Norway Spruce, Scotch Pine, Colorado Blue Spruce, Ponderosa Pine. No. 722—ALL 100—3-6" ONLY \$4.00 POSTPAID.

AMERICAN Highbush CRANBERRY

In the spring it is covered with showy white cymes of flowers; then in the fall and long into the winter the shrub makes itself known by its scarlet, translucent fruit. The beauty of the fruit is shown to much greater advantage if the shrub is so planted that the sun is allowed to shine through it, thus giving the translucent properties a chance to act. Besides being beautiful, the fruit has another property that is not as well known as it should be. It is edible and makes very good jelly alone or with other less tart fruits such as apples or peaches. It also makes a very good addition in preserves.

It is a tall shrub, growing to twelve feet so it will have to be used as accent at the corners of the house or as a backer in the shrub border. Will grow in all types of soils and will do well in either sun or shade. 6-9 in. seedlings: 10 for \$1.05; 25 for \$1.75; 50 for \$3.15; 100 for \$5.10. Postpaid.

8 LOVELY Ornamentals 2 of Each Kind \$3.50

AN IDEAL ORNAMENTAL EVERGREEN GROUP

These are fine heavy trees. The varieties are as follows: Black Hills Spruce, Colorado Blue Spruce, Red Cedar and American Arbor Vitae. All are 12 to 15 inches tall except Colorado Blue Spruce which are 8 to 12 inches. This is a matchless value in fine evergreens. Less than 50c each for fine sturdy trees. Supply Limited. Please order early.

SPECIAL

Grow Your Own Windbreak Stock
100 Norway Spruce, 2 yr. 3/6 in. size, for \$3.50 postpaid. Order No. 750.

HARD Sugar MAPLE

While these trees are rather slow growing, the years go by pretty fast. You'll be surprised how quickly they make a nice showing. Plant waste spaces to sugar maples. Have an eye on the future. These trees last for years and make a living monument to our foresight. Extremely hardy. Adapted to a wide range of soil and climate. A tree of rare beauty. At this special very low introductory price you can get out a lot of them. Plant them in lawns, along streets and roads and turn waste places into future gold mines. All prices are prepaid.

MAPLE TREE PRICES

1 to 1½ ft. size. 10 for \$1.25; 25 for \$2.65
50 for \$4.25; 100 for \$7.50
3 to 4 ft. size.....Each \$1.15; 2 for \$2.25
5 for \$4.75; 10 for \$8.00

EVERGREEN Seedlings

Evergreen seedlings should be planted in beds and cultivated like garden plants. Rows may be 18-24 inches apart with the Evergreens 10-15 inches apart in the row. Provide some shade for the first year. A covering of lath spaced about 1½ inches apart with slats running north and south is good. When 18-24 inches high, transplant into permanent location. For further planting instructions and windbreak ideas ask for our Free Circular giving a full description of all varieties.

Berry's Evergreen seedlings are grown in northern Wisconsin. They are vigorous with a strong root system guaranteed to be hardy and adapted anywhere. We ship direct to you prepaid at proper planting time, guaranteeing satisfaction.

Berry's QUALITY FRUITS ARE ALL Prepaid

FINEST QUALITY

Our enviable reputation is built on high quality at low prices—superior values. We have developed the largest business of its kind in the country on this sound policy.

These same high standards prevail in our nursery department. Each and every item is carefully tested before Berry's will put their name behind it. You can order our nursery stock with full confidence that it is accurately and honestly described, that the quality is of the highest and the prices the lowest.

In the fall, we can supply all nursery stock except Cannas, Dahlias, and Gladiolus Bulbs, Peaches, Sweet Cherries, Apricots and Roses. Most kinds of nursery stock can be very successfully planted in the Fall, even in severe climates.

EVERY ITEM

WHEN WE SHIP

In the spring, we study the weather reports and ship at the proper planting time in your locality. Don't be alarmed if your shipment is not received on the first warm day, for you may be sure your order is having careful attention.

When spring opens up all over the Central States, we are not always able to ship as promptly as we would like because of the manpower problem. As your order will be shipped as soon as possible, it is not necessary to write us. You may be sure that even in the rush season, your order will be received in time for successful planting.

Strawberries, Cannas, Dahlias, Peonies, Gladiolus and Perennials are shipped separately and not included in the same package with Fruits, Shrubs, etc.

GIANT FRUIT TREES

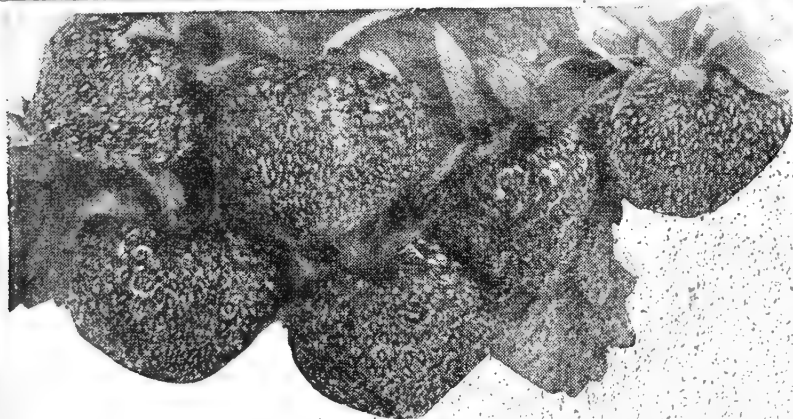

These are larger than regular sizes. Have grown at least 3 yrs. in the nursery, making them extra well rooted and branched. Will bear 2 to 3 yrs. quicker than regular size.

DWARF FRUIT TREES

Low growing compact trees. Fine for limited space, growing only 8 to 10 ft. tall. Same fruit as larger growing trees. ¼ ft. tall, ½ inch trunk diameter.

Delicious STRAWBERRIES

FOR YOUR GARDEN

SURE CROP

No. 4004—BLAKEMORE. New early market berry. Extra vigorous grower, heavy bearer, very drought resistant, healthy and good plant maker. Recommended for Northern States. Mild flavor, beautiful color, early maturity. For market or home.
No. 4005—SENATOR DUNLAP. Old reliable favorite for home or market. Strong, extra hardy grower—heaviest yielder of big, solid, red berries. Mid-season.

ABOVE 2 VARIETIES POSTPAID.
25 for 75c; 100 for \$2.25; 500 for \$9.00.

Have a big Strawberry Patch of your own for less than you would pay for one crate of berries at the store. Each plant costs you only a few cents, but will give up to two quarts of strawberries per plant. Grow your own delicious berries for eating fresh, or shortcakes and preserves. Our Sure-Crop and Thoro-Bred varieties will yield large crops every spring and our Everbearing variety will bear both spring and fall. Order now, and our healthy, hardy plants will be shipped to you at the proper time for planting in your locality. Strawberries cannot be shipped in the fall.

EVERBEARING

"All Everbearers Start Fruiting 90 Days After Planting"

No. 4020—MINN. 1166. Grows fast, bears early. Sturdy hardy plants. Can be set out early. Begin to bear in almost 60 days. Beautiful large berries from June to October. Postpaid: 25 for \$1.85; 100 for \$5.25; 500 for \$20.00.

No. 4000—GEM. Considered by many the best of the Everbearers. Year in and year out under various soils, climate, and growing conditions it will produce more fruits and plants than any other. The fruit is large and of delicious quality. Postpaid: 25 for \$1.35; 100 for \$4.00; 500 for \$16.00.

No. 4013—EVERBEARING STRAWBERRY GARDEN. 50 Gem and 50 Minn. 1166—100 for \$3.75. Prepaid.

THORO-BREDS

No. 4016—SCARLET BEAUTY. One of the best of the new varieties. Large, firm red berries with an extra sweet, delicious flavor. A good producer on strong plants. Strong stems hold berries off ground. Fine for home garden or local market. Postpaid: 25 for 90c; 100 for \$2.75; 500 for \$11.50.

No. 4007—PREMIER. Famous for flavor and heavy crops in any soil or climate. Berry's plants are true early strain—heavy bearers, big red berries. Postpaid: 25 for \$1.00; 100 for \$3.00; 500 for \$12.50.

No. 4012—SPRING STRAWBERRY GARDEN. 100 for \$2.25, 25 Blakemore, 25 Dunlap, 25 Scarlet Beauty, 25 Premier.

RHUBARB

No. 6862—MCDONALD SEEDLESS. The best flavored new Rhubarb that never goes to seed. Berry's send you strong divisions (part of a root with eyes) that develop into big, strong hardy plants. Each 70c; 5 for \$3.15; 10 for \$6.00; 25 for \$14.00. Postpaid.

No. 6864—CANADA RED RHUBARB. Newest and best of all Rhubarb! Extra large, tall stalks of juicy, very sweet, red meaty Rhubarb. Best for sauce, canning, or pies. Requires practically no sugar! Each 95c; 5 for \$4.25; 10 for \$8.00; 25 for \$19.00. Postpaid.

No. 6867—QUICK CROP CANADA RED. Extra large divisions of the delicious rhubarb described above, will produce mature stocks earlier. Each \$1.25; 5 for \$5.50. Postpaid.

No. 6861—GIANT VICTORIA. The old standby, tender and full of flavor. ½ inch whole roots. 5 for 50c; 10 for 90c; 25 for \$2.00. Postpaid.

No. 6865—QUICK CROP VICTORIA. Whole roots—almost twice as big as No. 6861. 5 for 85c; 10 for \$1.50; 25 for \$3.50. Postpaid.

RHUBARB GARDEN

3 Victoria, 1 McDonald, 1 Canada Red
No. 6868—5 plants for \$1.45. Postpaid.

BOYSENBERRY

No. 6800—REGULAR BOYSENBERRIES. The finest and most profitable fruit ever developed. The largest of all with the most delicious juicy, richly flavored fruit yet known. The plant is a vigorous grower, fruiting in early summer and bearing 8 to 10 weeks. No. 1 plants will bear the next season after planting. Postpaid: No. 1 tips, 10 for \$1.50; 25 for \$3.25; 100 for \$12.00.

No. 6801—THORNLESS BOYSENBERRIES. Has the same wonderful qualities of the regular Boysenberry, but with thornless canes. Plant is a vigorous grower. Hardy anywhere but requires protection in severe climates. No. 1 tips: 10 for \$1.85; 25 for \$4.00; 100 for \$14.50. Postpaid.

BLACKBERRIES

No. 6815—ALFRED. The largest most hardy, best flavored of all Blackberries. Earlier than Eldorado. Highly recommended for home gardens. No. 1 R. C.—10 for \$1.50; 25 for \$3.00; 100 for \$10.00. Prepaid.

ASPARAGUS

No. 6870—WASHINGTON. Rust Proof Strain. Large, tender stocks. Hardier, more disease resistant than most varieties. Fine for canning. 2 yr. plants—25 for \$1.25; 50 for \$2.25; 100 for \$4.00. Prepaid.

No. 6871—PARADISE. A new rust proof variety; produces extra large tips, yields more than other varieties. 2 yr. plants—25 for \$1.50; 50 for \$2.75; 100 for \$4.50. Prepaid.

QUICK CROP ASPARAGUS

Three-year size, larger, more mature roots! Yields a crop sooner. Shipped prepaid.

No. 6872—WASHINGTON QUICK CROP. 10 for 75c; 25 for \$1.50; 100 for \$5.00.

No. 6873—PARADISE QUICK CROP. 10 for 85c; 25 for \$1.75; 100 for \$6.00.

No. 6860—HORSE RADISH CUTTINGS
10 for 70c; 25 for \$1.45; 100 for \$5.00

BERRY SEED COMPANY, CLARINDA, IOWA

WHOLESALE DIRECT TO YOU PRICES

GUARANTEED TO SAVE YOU MONEY

These prices are F. O. B. Clarinda, Iowa, excepting the right hand column. That gives the price per bushel or per 100 lbs. (as shown) F. O. B. our Marion, Ohio, shipping point. If an item is not priced in the right hand column, then it is NOT available at Marion, Ohio. For eastern customers the savings in freight is greater than difference in price.

IMPORTANT: If you want Ohio shipment be sure to write plainly on order, **SHIP FROM MARION, O.** Also remit Ohio price.

All quotations include bags free. They are weighed in with the seed. If your order is postmarked previous to Feb. 15, 1949, we guarantee to fill orders at these prices, providing lots have not been sold out previous to that time. If possible we will protect them longer. For your own interest order early. It is not necessary to put item number on your order.

Items marked with an * are not listed in the catalog but are still available in limited supply.

BERRIES THAT GIVE BIG CASH CROPS QUICK!

Strawberries

PLANT BERRIES THIS YEAR, PICK BIG FRUIT CROPS NEXT YEAR

No. 4030 Streamliner

An excellent new Everbearing Strawberry. Large, sweet-flavored, rich, solid red berries. These hardy, vigorous plants will bear for you from 60 to 90 days after planting, and will bear right up to heavy frosts. Streamliner's fine flavor, large size and good color are sure to make it one of your favorites. It is a heavy bearer, self pollinating. Order some of these tasty new berries for your garden now. No. 4030—25 for \$2.15; 100 for \$6.00; 500 for \$24.00.

No. 4011—All Season Strawberry Garden

150 plants for \$4.00, Postpaid

50 each, Gem, Premier, and Dunlap. A special money saving collection designed for families who enjoy strawberries all summer. Saves you \$2.20 from regular catalog prices.

While strawberry plants are not too plentiful, we think we will have enough to fill all early orders. Do not expect to be able to accept any orders after May 1.

Every variety offered on these pages (60 and 61) will start producing big crops next year—crops to eat, can or sell. Order now—Harvest fruit, asparagus, and rhubarb next year when your needs will be greatest.

ALL ITEMS ON THIS PAGE EXCEPT BLUEBERRIES AND STRAWBERRIES CAN BE ORDERED IN SPRING OR FALL

BLUEBERRIES

You can now grow these large, sweet, tasty and cultivated Blueberries in your own garden. Have plenty of luscious berries for your table, for pies, muffins, etc. Do best in a moist, acid soil. If your soil is sweet you can easily acidify it by the use of peat moss or partially rotted vegetable matter around the plants. The bushes grow 3 to 4 ft. high and should be planted 4 ft. apart in the home garden. Plant at least two varieties for the best fruiting.

2 FOR \$2.75 POSTPAID

No. 6820—JERSEY. Extra large, firm, sweet berries. Make delicious blueberry pies. Midseason. 2 year plants, 2 for \$2.75; 6 for \$7.50. 3 year plants, 2 for \$3.50; 6 for \$9.50.

No. 6821—RUBEL. Huge, dark blueberries in large, dense clusters. Delicious flavor. Ripens late. 2 year plants, 2 for \$2.75; 6 for \$7.50. 3 year plants, 2 for \$3.50; 6 for \$9.50.

No. 6822—PIONEER. Sweet and tender, almost seedless berries. A good grower and producer. Ripens midseason. 2 year plants, 2 for \$2.75; 6 for \$7.50. 3 year plants, 2 for \$3.50; 6 for \$9.50.

Blueberry Garden: 1 each Jersey, Rubel and Pioneer.

No. 6837—2 year plants, 3 for \$3.75.

No. 6838—3 year plants, 3 for \$4.75.

GOOSEBERRIES

Delicious for pies, sauce, jelly or canning. Lots of fruit with no work. Extremely hardy, bear every year. Sturdy, well rooted 2 yr. No. 1 plants.

Prepaid Prices all Gooseberries Each 5
..... 60c \$2.50

No. 6702—MORRISON. The largest Black Raspberry ever produced—fruits often measure 1 inch in diameter. Bigger berries, fewer seeds, more juice, better flavor—all these super qualities on a vigorous, more hardy bush. 10 for \$2.15; 25 for \$4.50; 100 for \$16.00.

BERRY'S PREPAID NURSERY PRICES Save You Money!

Peaches

THE BIG MONEY CROP

Bear well third year after planting! Should be planted early in the spring and not in fall. Berry's prepaid prices save you at least 20%! The 4/6' and 5/7 ft. sizes are usually shipped by prepaid express. Be sure to give name of most convenient express station.

PREPAID PEACH PRICES

Description of Grades below	1-3	4-7	8 or more
Economy 2/3', 5/16"	\$0.50	\$0.40	\$0.35
Commercial 3/5', 7/16"	.75	.65	.60
Home Orchard 4/6', 9/16"	1.05	.90	.85
Giant Size 5/7', 11/16"	1.50	1.30

Giant size available in two varieties only: Elberta No. 6460; J. H. Hale No. 6461.

No. 6402—**EARLY ELBERTA**. Freestone. Large golden yellow with red cheek. Yellow flesh, firm, juicy, luscious flavor. Hardier than Elberta.

No. 6403—**ELBERTA**. Best known freestone, commercial variety. Yellow with reddish cheek. Excellent for canning. GIANT No. 6460.

No. 6405—**GOLDEN JUBILEE**. Yellow freestone. Firm, juicy, full flavored. 15 to 20 days earlier than Elberta.

No. 6406—**HALE HAVEN**. Best early freestone. Strong grower, very hardy—heavy bearer of fine flavored yellow peaches.

No. 6407—**J. H. Hale**. Earlier and larger than Elberta. Unusually fine flavor. Good yellow with red blush. Good keeper. Plant with other varieties. GIANT No. 6461.

No. 6413—**POLLY**. A very fine, white freestone peach. The fruit is large, blushed and ripens just before Elberta. The flesh is juicy white, but firm. Rich, delicious flavor. It bears young and is a heavy, consistent bearer. An excellent peach for all-around home use and for local markets. A self pollinizer.

No. 6415—**RED HAVEN**. The peach with all the "extras"—extra early, extra hardy, extra juicy, extra red, and extra heavy bearer. New and highly recommended.

QUINCE
No. 6429—**CHAMPION**. 3/4 foot size. Large, well flavored, orange yellow fruit, hardy, young bearing, vigorous trees. Each \$2.15; 4 or more \$2.00 each.

APRICOTS

Prepaid Prices

	1-3	4-7	8 or more
Economy 2/3', 5/16"	\$1.00	\$0.92	\$0.86
Commercial 3/5', 7/16"	1.25	1.10	1.00
Home Orchard 4/6', 9/16"	1.75	1.55	1.40

No. 6430—**CHINESE EARLY GOLDEN**. Favorite Commercial variety in many sections. Large, delicious heavy bearer.

No. 6431—**MOORPARK**. It is considered to be the best flavored, best quality of all apricots. Fruit is extra large, round, deep orange in color.

No. 6432—**SCOUT**. An extremely hardy Canadian variety. Fruit is large, golden-yellow, with an attractive reddish blush. Delicious flavor. Bears young.

APRICOT ORCHARD

A planting of 3 trees that gives fine satisfaction. 1 each Scout, Moorpark, and Chinese Golden in your choice of 2 sizes. No. 6434—3/4', 7/16"; 3 for \$3.00. No. 6435—4/5', 9/16"; 3 for \$4.50.

SPECIAL PEACH ORCHARDS • PRICED LOW!

4 Varieties—3 sizes of trees. In three different sized trees—3 different prices. We offer the four best varieties of peaches for an all-purpose Home Orchard. There are early, mid-season, and late varieties carefully selected for hardiness, long bearing season, and cross pollination. In each orchard you get 3 Elberta, 1 J. H. Hale, 1 Hale Haven and 1 Golden Jubilee. Six of the best at Berry's Money Saving Prices.

Grapes

ECONOMICAL TO START THEY LAST FOR MANY YEARS

4 NEW GRAPES High Quality Vines

No. 6602—**CACO**. Red. The hardiest red Grape. Vigorous grower, bearing young, heavily and regularly. Fruit is extra large, beautifully colored, sweet and juicy.

Prepaid Prices	Each	5	25
2 yr. No. 1.....	\$0.55	\$2.25	\$10.00
1 yr. No. 1.....	.45	1.75	7.50

No. 6612—**ONTARIO**. Best and sweetest of the early white Grapes. Large bunches of juicy, very tender fruit. Very hardy and productive.

Prepaid Prices	Each	5	25
2 yr. No. 1.....	\$0.65	\$2.50	\$11.25
1 yr. No. 1.....	.55	2.00	8.75

No. 6604—**FREDONIA**. Black. Destined to be America's favorite black Grape! Vigorous, productive and hardy. Large bunches of big juicy, deliciously flavored fruit—ripening 2 weeks earlier than Concord.

Prepaid Prices	Each	5	25
2 yr. No. 1.....	\$0.35	\$1.30	\$6.00
1 yr. No. 1.....	.27	1.10	4.25

No. 6605—**SHERIDAN**. A late keeping grape. Larger bunches, sweeter, richer flavor and fruit firmer than Concord. About a week later. Vigorous, hardy, more productive grapes. Do not shell as readily. Best late blue grape.

Prepaid Prices	Each	5	25
2 yr. No. 1....	\$0.65	\$2.50	\$11.25
1 yr. No. 1....	.55	2.00	8.75

OLD FAVORITES

2 yr. No. 1 is an extra strong, heavy vine. 1 yr. No. 1 is same size often sold as 2 yr. Recommended for vineyard plantings.

Prepaid Prices	2	5	25
2 yr. No. 1.....	\$0.80	\$1.10	\$7.00
1 yr. No. 1.....	.65	1.25	5.50

No. 6608—**MOORE'S EARLY**. Earlier than Concord. This large blue-black full flavored grape brings premium prices on any market.

No. 6609—**NIAGARA**. Enormous bunches of large greenish white, sweetly flavored fruit. Best white for market—good shipper. Requires protection in severe climate.

No. 6601—CONCORD—AMERICA'S CHOICE

The best commercial grape. Vines vigorous, extremely hardy and dependable bearers of large crops of big, blue-black fruit. 2 yr. No. 1—2 for 60c; 5 for \$1.25; 25 for \$5.50; 100 for \$20.00. 1 yr. No. 1—2 for 50c; 5 for 95c; 25 for \$4.25; 100 for \$15.00.

Cherries

EVERY HOME SHOULD HAVE SOME

SWEET CHERRIES

These varieties are deliciously sweet, and especially adapted for eastern states. Not as hardy as Sour Cherries, so not recommended for severe climates.

Prepaid Prices	1-3	4-7	8 or more
Commercial 3/5', 1/16"	\$1.60	\$1.45	\$1.35
Home Orchard 4/6', 1/16"	1.95	1.80	1.70
Quick Crop 5/7', 1/16"	2.35	2.15	2.05

No. 6301—**BLACK TARTARIAN**. Very large, purplish-black cherries of finest flavor. Rich, juicy. Excellent for eating fresh. Popular in the East.

No. 6303—**SCHMIDT'S BIG**. New attractive sweet cherry, rich mahogany in color. Grows in clusters. Yields an abundant crop.

No. 6304—**YELLOW GLASS**. Hardest of all sweet cherries. Golden yellow fruit is juicy and well flavored.

No. 6307—**BING**. Unusually large, heart-shaped, dark maroon fruit that is extremely attractive for market. Flesh is firm and juicy, full of rich, delicious flavor. Vigorous grower. Ripens in late June.

SOUR CHERRIES

These varieties are hardy anywhere and bear young. A big profit crop used for eating, canning, preserves and pies.

Prepaid Prices	1-3	4-7	8 or more
Commercial 3/4', 1/16"	\$1.35	\$1.25	\$1.20

Plums

2 YEARS \$1.20 IN LOTS OF 12
3 TO 5 FT. 1 Each

Hardy American Varieties

No. 6500—**SUPERIOR**. Qualities of California Plums, extra hardy, will quickly bear large crops. The huge dark red plums have juicy, full flavored tender yellow meat. Best for eating fresh, canning, or plum butter. Berry's No. 6565.

No. 6501—**RED WING**. An unusually large, dull red Plum developed in Minnesota. Flesh is rich, yellow, firm, juicy and sweet. Fine for eating or canning.

No. 6502—**UNDERWOOD**. Freestone. Extra large, deep red fruit. Ripens early and bears large crops. Very hardy.

No. 6504—**TOKA**. Highly recommended as a pollinizer for other Plums. Fruit is quite large and freestone. Apricot color with firm yellow, rich flavored flesh. Very hardy.

European and Japanese Group

These favorite varieties are not as hardy as American varieties so they are especially suited for states east of Illinois. Fine for eating or market. Plant at least 2 for proper cross pollination.

No. 6506—**ITALIAN BLUE PRUNE**. The old favorite Italian dark blue Prune Plum. Juicy and very well flavored. Excellent for eating fresh or canning. Not used for jelly.

No. 6507—**GREEN GAGE**.

Large sweet yellowish green fruit. Juicy and tasty for eating fresh or canning. One of the best late Plums. Stemmy cling stone.

No. 6508—**STANLEY PRUNE**. The most profitable Plum for Commercial or Home Orchard. Earliest Prune. Hardest European variety. Consistent bearer of large, blue, richly full flavored fruit. Freestone, subacid. Best for eating and canning.

No. 6510—**BURBANK**. **GIANT** No. 6564. One of the hardest European type Plum. Oval cherry red fruit, has delicious flavor, small stone. Bears heavy crop w/ young.

WINTER APPLES

No. 6107—DELICIOUS YELLOW. GIANT NO. 6169. Considered even better than Red Delicious. Superior in flavor, texture, and keeping qualities. The very best golden apple.

No. 6108—DELICIOUS NEW RED. GIANT NO. 6160, DWARF NO. 6145. America's Sweetheart! Supreme in flavor and keeping qualities. Young bearing. Thrive anywhere.

No. 6104—McINTOSH, RED. DWARF NO. 6147. GIANT NO. 6165. Extra hardy, strong long lived trees. Fruit uniformly well shaped and colored. Juicy, full flavored. Especially recommended for Northern States.

No. 6112—STAYMAN'S WINESAP. GIANT NO. 6166. The extra large, hardy Winesap. Fine for eating or cooking. Good keeper.

No. 6118—NORTHWEST GREENING. Keeps until spring. Excellent for eating or cooking after Xmas. Bears young.

No. 6116—JONATHAN—DARK RED. DWARF NO. 6149. Most profitable apple in many localities. Heavy, consistent bearer of rich, juicy, tart, good keeping apples.

No. 6106—CORTLAND. A winter apple. An improved late McIntosh. Large red apples, with firm juicy flesh. Hardy, productive trees that come into bearing at an early age.

No. 6111—RED ROME BEAUTY. Large, juicy, pleasantly flavored red winter apple. Excellent for eating or cooking. Good keeper. Vigorous, hardy, and a heavy yielder. Bears young.

No. 6101—CRIMSON WINESAP. Large, very dark red, full flavored. Excellent for eating or cooking. Best for late storage. Best Winesap for home or commercial orchards.

No. 6103—GRIMES GOLDEN. Golden yellow apple with firm, white flesh, and sparkling, cidery flavor. Not recommended in severe climates.

FALL APPLES

No. 6105—WEALTHY. The favorite Red Fall Apple—delicious flavor, extra juicy. Very hardy, excellent keeper.

No. 6113—YELLOW TRANSPARENT. GIANT NO. 6164. Bears very young. Big crops, juicy, full flavored apples in early fall.

QUINTUPLET APPLE TREES

5 Varieties—all in one vigorous extra strong tree. Have an apple orchard in your own back yard. If you have room for only one or two trees, here is an opportunity to have 5 different kinds of apples ripening at different times, all on one tree. Red and yellow apples—Fall and Winter apples. No. 6120—Trees are 4 to 5 feet tall. \$2.85 each, Express or Parcel Post Prepaid.

SUMMER APPLES

No. 6102—DUCHESS. Best and hardiest red summer apple. Tart. Fine for cooking, sauce, pies, apple butter, etc.

No. 6119—ANOKA. An extra hardy variety, bears young. Bright yellow fruit striped with red. Excellent for cooking. Often bears 2 or 3 years after planting.

CRAB TREES

No. 6124—WHITNEY. A wonderful large early crab for eating, canning or pickling. Tree very hardy, bears very young.

BERRY TREE SIZES

COMMERCIAL SIZE. Being lower priced, usually preferred for large Orchard planting. 3/5 ft. tall, $\frac{1}{16}$ to $\frac{1}{8}$ in. diameter. Extra value at Berry's prepaid prices that save you at least 20%.

HOME ORCHARD SIZE. Strong $\frac{1}{16}$ to $\frac{1}{8}$ inch diameter—4/6 ft. tall. Very well branched and well rooted.

QUICK CROP SIZE. 5/7 ft. tall— $\frac{1}{16}$ to 1 inch diameter—extra heavily branched and well rooted. Plant this size for better results.

GIANT SIZE. 5/7 ft. tall. $\frac{3}{8}$ to 1 inch diameter. These extra large, sturdy trees will bear crops quicker.

DWARF SIZE. 3/4 ft. tall. $\frac{1}{8}$ inch diameter. Grow only 8 to 10 ft. tall. Fine for limited space.

See Page 60 for further description on Giant and Dwarf size trees.
